Revision Record

Version	Revised Date	Content of Revision
0.9	Feb. 1, 2009	First Edition
1.0	Feb. 16, 2009	Baseline
1.1	Feb. 25, 2009	Install ActiveX control of Network Camera is supported.
1.2	Jul. 27, 2009	Add chart / table reference number. 5.3.1.4. Add Search condition. 5.5.1.4. Add preset functions to CameraOperation method.
1.2 R02	Sep. 30, 2009	Correct the following points of this document. 2.3. Change the firmware version of DG-ND200/WJ-ND200. 5.5.1.1. Change the description of tilt speed.
2.0 R01	Oct 16, 2009	1.6. Add the description of Download function to Overview of Functions. 1.7. Add the description of SearchEx method, OnSearchExCB, FTP functions to Function list. 1.8. Add SearchEx method, FTP functions to Compatible chart by models. 2.3. Add HD600/700 series and NP502/NW502S series to supported devices. 3.1. Update Product list. 4.4.2. Add the description of FTP function. 5.1.1.1. Add SearchEx method. 5.1.1.1. Add GetDevTimeZone method. 5.1.1.1. Add FtpGet method. 5.1.1.1. Add FtpCancel method. 5.1.1.1. Add FtpServerClose method. 5.1.1.1. Add GetFtpStatus method. 5.1.1.1. Add GetFtpTransRate method. 5.1.1.1. Add GetFtpTransByte method. 5.1.1.1. Add SearchResultEx property. 5.1.1.1. Add OnSearchExCBEnable property. 5.1.1.1. Add H264Port property. 5.1.1.1. Add H264Resolution property. 5.1.1.1. Add MulticastAutoConf property. 5.1.1.1. Add StreamNumber property. 5.1.1.1. Add TransFrameRate property. 5.1.1.1. Add FtpPort property. 5.1.1.1. Add FtpTransMode property. 5.1.1.1. Add OnFtpStatusCBEnable property. 5.1.1.1. Add OnSearchExCB event. 5.1.1.1. Add OnFtpStatusCB event. 5.2.2.1. Add the description of HD600/700 to DeviceType property. 5.2.2.8. Add the description of HD600/700 to UID property. 5.3.1.1. Add the description of HD600/700 to GetDeviceStatus method. 5.3.1.2. Add the description of HD600/700 to RecCtrl method. 5.3.1.3. Add the description of HD600/700 to GetRecCtrlStatus method. 5.3.1.4. Add the description of HD600/700 to Search method. 5.3.1.4. Add condition type to Search method.

Version	Revised Date	Content of Revision
2.0 R01	Oct 16, 2009	<p>5.3.1.5. Add SearchEx method.</p> <p>5.3.1.6. Add GetDevTimeZone method</p> <p>5.3.2.2. Add the event type of HD600/700 to SearchResult property.</p> <p>5.3.2.3. Add SearchResultEx property.</p> <p>5.3.3.1. Add the description of HD600/700 to OnDevStatus event.</p> <p>5.3.3.2. Add the description of HD600/700 to OnRecStatus event.</p> <p>5.3.3.5. Add OnSearchExCB event.</p> <p>5.4.1.1. Add the description of HD600/700 to GetFrameTime method.</p> <p>5.4.1.2. Add the description of HD600/700 and H.264 to PlayLive method.</p> <p>5.4.1.3. Add the description of HD600/700 and skip to the latest record to Play method.</p> <p>5.4.1.5. Add the description of HD600/700 PlayControl method.</p> <p>5.4.1.7. Add the description of HD600/700 GetPlaySpeed method.</p> <p>5.4.1.8. Add the description of HD600/700 GetFrameRate method.</p> <p>5.4.2.2. Add H264Port property.</p> <p>5.4.2.3. Add the description of H.264 to MulticastAddr property.</p> <p>5.4.2.5. Add H264Resolution property.</p> <p>5.4.2.6. Add the resolution type 2048 to JPEGResolution property.</p> <p>5.4.2.7. Add the description of H.264 to StreamFormat property.</p> <p>5.4.2.7 Add the description about getting property automatically to StreamFormat.</p> <p>5.4.2.8. Add MulticastAutoConf property.</p> <p>5.4.2.9. Add StreamNumber property.</p> <p>5.4.2.10. Add TransFrameRate property.</p> <p>5.4.3.1. Add the description of HD600/700 to OnPlayStatus event.</p> <p>5.5.1.1. Add the description of HD600/700 to CameraControl method.</p> <p>5.5.1.4. Add the description of HD600/700 to CameraOperation method.</p> <p>5.5.1.5. Add the description of HD600/700 to GetCameraOperationStatus method.</p> <p>5.5.3.1. Add the description of HD600/700 to OnOpStatus event.</p> <p>5.5.3.2. Add the description of HD600/700 to OnOpStatusCB event.</p> <p>5.6.1.1. Add the description of HD600/700 to AlarmOperation method.</p> <p>5.6.3.1. Add the description of HD600/700 to OnAlmStatus event.</p> <p>5.7. Add the description of FTP group functions.</p>

Version	Revised Date	Content of Revision
2.0 R01	Oct 16, 2009	6. Add the description of HD600/700 to Operation Procedure and Sequence. 6. Add the description of H.264 to Operation Procedure and Sequence. 6.10. Add Operation Procedure and Sequence of FtpGet.
2.0 R01	Oct. 30, 2009	Correct the following points of this document. 5.5.1.1 Add the description of Pan/Tilt direction depending on camera setting condition. 5.5.1.2 Add the description of Pan/Tilt direction depending on camera setting condition. 5.5.1.3 Add the description of Pan/Tilt direction depending on camera setting condition. 5.5.2.3 Add the description of Pan/Tilt direction depending on camera setting condition. 5.5.2.4 Add the description of Pan/Tilt direction depending on camera setting condition. 5.2.2.4 Add the description of HttpTimeout.
2.0 R01	Nov. 9, 2009	Update Package contents list
2.0 R02	Dec. 1, 2009	Update by QC indication.
2.0 R02	Dec. 24 2009	Correct the spelling.
2.0 R03	Jan. 26, 2010	Change company name.
3.0 R01	Jun. 23, 2010	1.4 Deleted VisualC++6.0, VisualC++2005 and Visaul Basic 6.0 from Abbreviations. 1.6 Added "Image recognition" to Overview of Functions. 1.6 Added "Digital zoom, Overlay" to Overview of Functions. 1.6 Added "Snap Shot" to Overview of Functions. 1.6 Added "Audio reception and transmission" to Overview of Functions. 1.6 Added "Auto Back Focus functions, Super Dynamic function" to camera control function of Overview of Functions. 1.6 Added "Control AUX" to Overview of Functions. 1.7 Added ClearWaitingFunc、GetWaitingFuncCount method to the function list. 1.7 Added VmdSearchEx method to the function list. 1.7 Added SearchCancel method to the function list. 1.7 Added GetDeviceLog method to the function list. 1.7 Added GetDevCurrentInfo method and GetInfoString method to the function list. 1.7 Added PlayControlByTime method to the function list. 1.7 Added GetImageResolution method to the function list. 1.7 Added SaveJpegImage method, GetJpegImage method, SaveBitmapImage method and GetBitmapImage method. 1.7 Added TitleOperation method, GetTitle method and BoxOperation method to the function list. 1.7 Added DigitalZoomMove method to the function list. 1.7 Added SetIntelligentView method, GetIntelligentView method, SetIntelligentViewColor method, GetIntelligentViewColor method, SetIntelligentViewSize method, GetIntelligentViewSize method, SetIntelligentViewTrackTime method and GetIntelligentTrackTime method to the function list.

Version	Revised Date	Content of Revision
3.0 R01	Jun. 23, 2010	<p>1.7 Added AudioSend method, GetAudioSendStatus method to the function list.</p> <p>1.7 Added CameraCentering method to the function list.</p> <p>1.7 Added CameraAuxControl method and GetCameraAuxStatus method to the function list.</p> <p>1.7 Added OnRecordStatus method to the function list.</p> <p>1.8 Updated the list of compatible chart by models.</p> <p>2.1 Added Windows 7 Professional to System Environment.</p> <p>2.1 Deleted Pentium4 from System Environment.</p> <p>2.2 Deleted C++ 6.0, Visual C++ 2005 and Visual Basic 6.0 from System Environment.</p> <p>5.1.1.1 Added ClearWaitingFunc method and GetWaitingFuncCount method.</p> <p>5.1.1.1 Added VmdSearchEx method and SearchCancel method.</p> <p>5.1.1.1 Added GetDeviceLog method.</p> <p>5.1.1.1 Added GetDevCurrentInfo method and GetInfoString method.</p> <p>5.1.1.1 Added PlayControlByTime method.</p> <p>5.1.1.1 Added GetImageResolution method.</p> <p>5.1.1.1 Added SaveJpegImage method.</p> <p>5.1.1.1 Added GetJpegImage method.</p> <p>5.1.1.1 Added SaveBitmapImage method.</p> <p>5.1.1.1 Added GetBitmapImage method.</p> <p>5.1.1.1 Added TitleOperation method, GetTitle method and BoxOperation method.</p> <p>5.1.1.1 Added DigitalZoomMove method.</p> <p>5.1.1.1 Added GetDigitalZoomPosition method.</p> <p>5.1.1.1 Added SetIntelligentView method, GetIntelligentView method, SetIntelligentViewColor method, GetIntelligentViewColor method, SetIntelligentViewSize method, GetIntelligentViewSize method, SetIntelligentViewTrackTime method and GetIntelligentViewTrackTime method.</p> <p>5.1.1.1 Added AudioSend method and GetAudioSendStatus method.</p> <p>5.1.1.1 Added CameraCentering method.</p> <p>5.1.1.1 Added CameraAuxControl method and GetCameraAuxStatus method.</p> <p>5.1.1.1 Added SearchMultiChMask property.</p> <p>5.1.1.1 Added ImageResolutionWidth property and ImageResolutionHeight property.</p> <p>5.1.1.1 Added DigitalZoom property, DigitalZoomMode property, DigitalZoomPositionX property and DigitalZoomPositionY property.</p> <p>5.1.1.1 Added SkipRecordGap property.</p> <p>5.1.1.1 Added MultiScreenChannel property.</p> <p>5.1.1.1 Added OnRecordStatusEnable property.</p> <p>5.1.1.1 Added AudioRcvEnable property, AudioRcvVolume property, AudioRcvMute property, AudioSendVolume property and AudioSendMute property.</p> <p>5.1.1.1 Added OnRecordStatus event.</p>

Version	Revised Date	Content of Revision
3.0 R01	Jun. 23, 2010	<p>5.2.1.5 Added ClearWaitingFunc method.</p> <p>5.2.1.6 Added GetWaitingFuncCount method.</p> <p>5.3.1.6 Added VmdSearchEx method.</p> <p>5.3.1.7 Added SearchCancel method.</p> <p>5.3.1.8 Added GetDeviceLog method.</p> <p>5.3.1.10 Added GetDevCurrentInfo method.</p> <p>5.3.1.11 Added GetInfoString method.</p> <p>5.3.2.2 Added SearchMultiChMask property.</p> <p>5.4.1.5 Added Next recoed and Previous record to PlayControl method.</p> <p>5.4.1.6 Added PlayControlByTime method.</p> <p>5.4.1.10 Added GetImageResolution method.</p> <p>5.4.1.12 Added SaveJpegImage method.</p> <p>5.4.1.13 Added GetJpegImage method.</p> <p>5.4.1.14 Added SaveBitmapImage method.</p> <p>5.4.1.15 Added GetBitmapImage method.</p> <p>5.4.1.16 Added TitleOperation method.</p> <p>5.4.1.17 Added GetTitle method.</p> <p>5.4.1.18 Added BoxOperation method.</p> <p>5.4.1.19 Added DigitalZoomMove method.</p> <p>5.4.1.20 Added GetDigitalZoomPosition method.</p> <p>5.4.1.21 Added SetIntelligentView method.</p> <p>5.4.1.22 Added GetIntelligentView method.</p> <p>5.4.1.23 Added SetIntelligentViewColor method.</p> <p>5.4.1.24 Added GetIntelligentViewColor method.</p> <p>5.4.1.25 Added SetIntelligentViewSize method.</p> <p>5.4.1.26 Added GetIntelligentViewSize method.</p> <p>5.4.1.27 Added SetIntelligentViewTrackTime method.</p> <p>5.4.1.28 Added GetIntelligentViewTrackTime method.</p> <p>5.4.2.7 Added ImageResolutionWidth property.</p> <p>5.4.2.8 Added ImageResolutionHeight property.</p> <p>5.4.2.13 Added DigitalZoom property.</p> <p>5.4.2.14 Added DigitalZoomMode property.</p> <p>5.4.2.15 Added DigitalZoomPositionX property.</p> <p>5.4.2.16 Added DigitalZoomPositionY property.</p> <p>5.4.2.17 Added SkipRecordGap property.</p> <p>5.4.2.18 Added MultiScreenChannel property.</p> <p>5.4.2.20 Added OnRecordStatusEnable property.</p> <p>5.4.3.2 Added OnRecordStatus event.</p>

Version	Revised Date	Content of Revision
3.0 R01	Jun. 23, 2010	5.5.1.1 Added AudioSend method. 5.5.1.2 Added GetAudioSendStatus method. 5.5.2.1 Added AudioRcvEnable property. 5.5.2.2 Added AudioRcvVolume property. 5.5.2.3 Added AudioRcvMute property. 5.5.2.4 Added AudioSendVolume property. 5.5.2.5 Added AudioSendMute property. 5.6.1.4 Added Auto back Focus functions and Super Dynamic function to CameraOperation method. 5.6.1.6 Added CameraCentering method. 5.7.1.7 Added CameraAuxControl method. 5.7.1.8 Added GetCameraAuxStatus method.
3.0 R02	Jul. 30, 2010	1.7 Added MultiSyncPause method and MultiSyncTime method. 1.8 Deleted ND300 from the list of device that can specify the playback speed directly. 4.3 Added MultiSyncPause method and MultiSyncTime method to the network playback of "Restrictions of the usage when using the shared UID" section. 5.1.1.1 Added the argument of summer time information to PlayControlByTime method. 5.1.1.1 Added MultiSyncPausemethod and MultiSyncTime method. 5.1.1.1,Added the argument of summer time information to OnRecordStatus method. 5.4.1.5 Deleted ND300 from the list of device that can specify the playback speed directly. 5.4.1.6 Added the argument of summer time information to PlayControlByTime method. 5.4.1.29 Added MultiSyncPause method. 5.4.1.30 Added MultiSyncTime method 5.4.3.2 Added the argument of summer time information to OnRecordStatus. 5.4.3.2 Added the description that OnRecordStatus doesn't occur with file playback. 5.5.1.1 Added the description about audio transmission in case that send audio to the full duplex mode device or the half duplex mode device. 6.12 Added the operation procedure and the sequence for Audio. 6.13 Added the operation procedure and the sequence for SnapShot. 6.14 Added the operation procedure and the sequence for Overlay. 6.15 Added the operation procedure and the sequence for VmdSearchEx.
3.0 R02	Aug. 4, 2010	2.3 Update Supported Panasonic Products.
3.0 R02	Aug. 17, 2010	3.1.1 Update Package contents list. 3.2 Added the VC++ runtime install procedure. 3.3 Added the VC++ runtime uninstall procedure.

Version	Revised Date	Content of Revision
4.0 R01	Dec. 14, 2010	<p>1.7. Add the description of GetPicturePosition method to Function list.</p> <p>1.8. Add GetPicturePosition to Compatible chart by models.</p> <p>2.3. Add NV200 series, SC385 series and SP105/SP102 series to supported devices.</p> <p>3 Separate Install/Uninstall procedure.</p> <p>3.5 Update the description of UID in Restrictions.</p> <p>4.2 Added the limitation description about NV200 connection.</p> <p>5.1.1.1 Added GetPicturePosition method.</p> <p>5.1.1.1 Added FilePassword property.</p> <p>5.1.1.1 Added PictureFitMode property.</p> <p>5.1.1.1 Added PicturePosTopX property.</p> <p>5.1.1.1 Added PicturePosTopY property.</p> <p>5.1.1.1 Added PicturePosBottomX property.</p> <p>5.1.1.1 Added PicturePosBottomY property.</p> <p>5.3.1.2 Added the description that NV200 doesn't support Manual recording to Note of RecCtrl method.</p> <p>5.4.1.4 Added the description about FilePassword property to Note of PlayFile method.</p> <p>5.4.1.10 Added GetPicturePosition method.</p> <p>5.4.2.5 Added 16:9 resolution to H264Resolution property.</p> <p>5.4.2.6 Added 16:9 resolution to JPEGResolution property.</p> <p>5.4.2.10 Added FilePassword property.</p> <p>5.4.2.14 Added PictureFitMode property.</p> <p>5.4.2.15 Added PicturePosTopX property.</p> <p>5.4.2.16 Added PicturePosTopY property.</p> <p>5.4.2.17 Added PicturePosBottomX property.</p> <p>5.4.2.18 Added PicturePosBottomY property.</p> <p>5.6.1.4 Added Preset sequence, Auto sort, Patrol functions to CameraOperation method.</p> <p>6.3.1 Added FilePassword to Operation Procedure of PlayFile.</p> <p>6.3.2 Added FilePassword to Sequence of PlayFile.</p> <p>7 Update error code list.</p>
4.1 R01	Aug. 23, 2011	<p>2.1 Added Windows 7 Professional SP1 to System Environment.</p> <p>2.1 Added Microsoft® Windows Server® 2003 to System Environment.</p> <p>2.3. Added SW355 series, SC384 series, SW395 and SF340 series to supported devices.</p> <p>5.1.1.1 Added InternetMode property.</p> <p>5.4.2.13 Added InternetMode property.</p> <p>7 Updated error code list.</p>

Version	Revised Date	Content of Revision
5.0 R01	Dec. 21, 2011	<p>2.1 Added Microsoft® Windows Server® 2008 R2 to System Environment.</p> <p>2.3 Separate supported devices to another document (PS-API Supported Product List).</p> <p>5.2.2.2 Added IPv6 description.</p> <p>5.3.1.12 Added SetCameraTime method.</p> <p>5.4.1.18 Added TitleOperationEx method.</p> <p>5.4.1.21 Added BoxOperationEx method.</p> <p>5.4.1.22 Added BitmapOperationEx method.</p> <p>5.4.2.3 Added RtpPortMode property.</p> <p>5.4.2.4 Added RtpPortRange property.</p> <p>5.4.2.16 Added FastPlayMode property.</p>
5.0 R02	Feb. 16, 2012	5.6.1.4 SC386 and SW396 support Patrol function of CameraOperation.
6.0 R01	Apr. 27, 2012	<p>1.7. Add the description of GetLoginStatus method, GetUIDInfo method, GetSIDInfo method, GetStatisticsData method and SetUIDPriority method to Function list.</p> <p>1.8. Add GetLoginStatus method, GetUIDInfo method, GetSIDInfo method, GetStatisticsData method and SetUIDPriority method to Compatible chart by models.</p> <p>4.3 Added the description of StreamID.</p> <p>5.2.1.7 Added GetLoginStatus method.</p> <p>5.2.1.8 Added GetUIDInfo method.</p> <p>5.2.1.9 Added GetSIDInfo method.</p> <p>5.2.2.11 Added UIDInfoMax property.</p> <p>5.2.2.12 Added UIDInfoUse property.</p> <p>5.2.2.13 Added SIDInfoMode property.</p> <p>5.2.2.14 Added SIDInfoMax property.</p> <p>5.2.2.15 Added SIDInfoUse property.</p> <p>5.3.1.13 Added GetStatisticsData method.</p> <p>5.3.1.14 Added SetUIDPriority method.</p> <p>5.4.2.29 Added SIDMode property.</p> <p>7 Updated error code list.</p>
6.0 R02	Jul. 7, 2012	Add SF539 series and SF549 series to supported devices.

Version	Revised Date	Content of Revision
7.0 R01	Dec. 25, 2012	<p>1.7. Added the description of CamSnapShot method to Function list.</p> <p>1.7. Deleted the description of SetIntelligentView method, GetIntelligentView method, SetIntelligentViewColor method, GetIntelligentViewColor method, SetIntelligentViewSize method, GetIntelligentViewSize method, SetIntelligentViewTrackTime method and GetIntelligentTrackTime method from Function list.</p> <p>1.8. Added CamSnapShot method to Compatible chart by models.</p> <p>4.7 Added the description of 360-degree network camera.</p> <p>5.1.1.1 Deleted SetIntelligentView method, GetIntelligentView method, SetIntelligentViewColor method, GetIntelligentViewColor method, SetIntelligentViewSize method, GetIntelligentViewSize method, SetIntelligentViewTrackTime method and GetIntelligentTrackTime method from list.</p> <p>5.1.1.1 Added CamSnapShot method to list.</p> <p>5.4.1.25 Deleted SetIntelligentView method.</p> <p>5.4.1.26 Deleted GetIntelligentView method.</p> <p>5.4.1.27 Deleted SetIntelligentViewColor method.</p> <p>5.4.1.28 Deleted GetIntelligentViewColor method.</p> <p>5.4.1.29 Deleted SetIntelligentViewSize method.</p> <p>5.4.1.30 Deleted GetIntelligentViewSize method.</p> <p>5.4.1.31 Deleted SetIntelligentViewTrackTime method.</p> <p>5.4.1.32 Deleted GetIntelligentViewTrackTime method.</p> <p>5.4.1.35 Added CamSnapShot method.</p> <p>7 Updated error code list.</p>
7.1 R01	Mar. 21, 2013	<p>1.7. Add the description of SetCameralmageCap method to Function list.</p> <p>1.8. Add SetCameralmageCap method to Compatible chart by models.</p> <p>1.8 Added the limitation description about RecCtrl method.</p> <p>2.1 Added Microsoft® Windows® 8 Pro to System Environment.</p> <p>5.1.1.1 Added SetCameralmageCap method to list.</p> <p>5.4.1.9 Updated the note of GetFrameRate method.</p> <p>5.6.1.9 Added Add SetCameralmageCap method.</p> <p>7 Updated error code list.</p>

Version	Revised Date	Content of Revision
7.2 R01	Jul. 12, 2013	<p>1.8. Added new model of 360-degree Network Camera.</p> <p>4.7. Added new model of 360-degree Network Camera .</p> <p>5.4.1.1. Updated Retun Value of GetFrameTime method</p> <p>5.4.1.2. Updated Argument and Note of PlayLive method.</p> <p>5.4.1.35. Updated Argument of CamSnapShot method.</p> <p>5.4.2.14. Updated Note of StreamNumber property.</p> <p>5.4.3.1. Updated Argument of OnPlayStatus method.</p> <p>5.6.1.1. Updated Argument and Note of CameraControl method.</p> <p>5.6.1.2. Updated Argument and Note of SetCameraPosition method</p> <p>5.6.1.3. Updated Note of GetCameraPosition method.</p> <p>5.6.1.4. Updated Argument and Note of CameraOperation method.</p> <p>5.6.1.5. Updated Argument of GetCameraOperationStatus method.</p> <p>5.6.1.6. Updated Argument and Note of CameraCentering method.</p> <p>5.6.2.3. Updated Argument of CameraPosPan property.</p> <p>5.6.2.4. Updated Value and Note of CameraPosTilt property.</p> <p>5.6.2.5. Updated Value of CameraPosZoom property.</p> <p>5.6.3.1. Updated Argument of OnOpStatus event.</p> <p>5.7.1.1. Updated Argument of AlarmOperation method.</p> <p>5.7.3.1. Updated Argument of OnAlmStatus event.</p> <p>6.5.1 Updated Description of Absolute position camera control (12 SetCameraPosition).</p> <p>5.4.2.6. Updated Value of MPEG4Resolution property.</p> <p>5.4.2.7. Updated Value of H264Resolution property.</p> <p>5.5.2.8. Updated Value of JPEGResolution property.</p> <p>Correction of Typographical Error.</p>
7.4 R01	Mar. 26, 2014	<p>2.1 Added Microsoft® Windows® 8.1 Pro to System Environment.</p> <p>2.1 Updated System Environment.</p> <p>4.7 Updated the description of 360-degree network camera.</p> <p>5.4.2.7. Updated Value of H264Resolution property.</p> <p>5.5.2.8. Updated Value of JPEGResolution property.</p> <p>5.4.2.14. Updated Value of StreamNumber property.</p> <p>5.4.2.31 Added DecResolutionMode property</p> <p>5.5.1.1. Updated Note of AudioSend method.</p> <p>5.3.1.12. Updated Note of SetCameraTime method.</p> <p>5.6.1.4. Updated Argument for CameraOperation method.</p> <p>7 Updated error code list.</p>

INDEX

1. Preface	1
1.1. What's PS-API	1
1.2. Trademarks and Registered Trademarks	1
1.3. Limitation of liability	1
1.4. Abbreviations	2
1.5. Structures of PS-API	2
1.6. Overview of Functions	3
1.7. Function List	4
1.8. Compatible chart by models	13
2. System requirements	16
2.1. System Environment	16
2.2. Development Environment	17
2.3. Supported i-PRO Products	17
3. Setup	18
3.1. Product	18
3.2. Install	19
3.3. UnInstall	19
3.4. Control name and Class ID	19
3.5. Restrictions	20
4. Overview of Library	22
4.1. Connect to the device	22
4.2. Connect to the device (Advanced usage for connection with recorder)	23
4.3. Restrictions of the usage when using the shared UID	24
4.4. Steps to control the device with PS-API	28
4.5. Relationship between PS-API and Device	29
4.5.1. Display video images	29
4.5.2. FTP download	32
4.5.3. MP4 or n3 file download	33
4.6. Sync/Async Transaction Operation	34
4.6.1. Synchronous method call	34
4.6.2. Asynchronous method call	35
4.6.3. Receiving a event notification	36
4.7. About 360-degree Network Camera	37
4.7.1. How to get the image capture mode of 360-degree network camera	37
4.7.2. The explanation if image capture mode of 360-degree network camera	39
4.8. Restriction by device settings	45
4.8.1. Smart Cording	45
5. Details of Functions	46
5.1. Object	46
5.1.1. Object Definition	46
5.1.1.1. PSAPI Control	46
5.2. PS Builder Group	52
5.2.1. Method	52
5.2.1.1. Open	52
5.2.1.2. Connect	54
5.2.1.3. Close	56
5.2.1.4. Disconnect	58
5.2.1.5. ClearWaitingFunc	60
5.2.1.6. GetWaitingFuncCount	62
5.2.1.7. GetLoginStatus	64
5.2.1.8. GetUIDInfo	66
5.2.1.9. GetSIDInfo	68
5.2.2. Property	70
5.2.2.1. DeviceType	70

5.2.2.2.	IPAddr	72
5.2.2.3.	HttpPort	74
5.2.2.4.	HttpTimeout	76
5.2.2.5.	ProxyName	78
5.2.2.6.	ProxyPort	80
5.2.2.7.	AccessType	82
5.2.2.8.	UID	84
5.2.2.9.	UIDEx	86
5.2.2.10.	UserName	87
5.2.2.11.	Password	89
5.2.2.12.	UIDInfoMax	91
5.2.2.13.	UIDInfoUse	93
5.2.2.14.	SIDInfoMode	95
5.2.2.15.	SIDInfoMax	97
5.2.2.16.	SIDInfoUse	99
5.2.2.17.	SecureCommunicationMode	101
5.2.2.18.	CertificateVerifyEnable	103
5.2.2.19.	OnErrorEnable	105
5.2.3.	Event	107
5.2.3.1.	OnError	107
5.3.	Device Group	109
5.3.1.	Method	109
5.3.1.1.	GetDeviceStatus	109
5.3.1.2.	RecCtrl	111
5.3.1.3.	GetRecCtrlStatus	113
5.3.1.4.	Search	115
5.3.1.5.	SearchEx	118
5.3.1.6.	VmdSearchEx	121
5.3.1.7.	SearchCancel	125
5.3.1.8.	GetDeviceLog	127
5.3.1.9.	GetDevTimeZone	129
5.3.1.10.	GetDevCurrentInfo	131
5.3.1.11.	GetInfoString	133
5.3.1.12.	SetCameraTime	135

1. Preface

1.1. What's PS-API

PS-API is the software which is provided to help to develop the application to control i-PRO Co., Ltd. made security products (Network cameras, Network Disk Recorders, Digital Disk Recorders, Network Interface Units) by the unified method and to get video image.

PS-API is provided as the OCX.

1.2. Trademarks and Registered Trademarks

Microsoft and Windows are registered trademarks of Microsoft Corporation in U.S. and/or other countries. Other names of companies and product contained in these operating instructions may be trademarks or registered trademarks of their respective owners.

1.3. Limitation of liability

- PS-API provides interfaces for the application software that controls i-PRO Co., Ltd. made security products (Network cameras, Network Disk Recorders, Digital Disk Recorders, Network Interface Units), and is not designed to protect against "theft" or "crime" independently.

- The provided sample programs are designed to instruct users how to use the SDK. They are not developed for the purpose of actual surveillance system.

- In not event shall i-PRO Co., Ltd. be liable to any party or any person, except for replacement or reasonable maintenance of the product, for the cases, including but not limited to below;

- [1] Any damage and loss, including without limitation, direct or indirect, special, sequential or exemplary, arising out of or relating to the product;

- [2] Personal injury or any damage caused by inappropriate use or neglect operation of the user;

- [3] Any problems, consequential inconvenience, or loss or damage, arising out of the reverse compiling or reverse engineering of the product;

- [4] Any loss or damage, or claims arising out from loss or leak of PS data including video data in the PC;

- [5] Any claim or action for damages, brought by any person or organization being a photogenic subject, due to violation of privacy with the result of that surveillance camera's picture, including saved data, for some reason, becomes public or is used for the purpose other than surveillance;

1.4. Abbreviations

The following abbreviations are used in these operating instructions.

Microsoft® Visual Basic 2005 is described as Visual Basic 2005.

Microsoft® Visual C# 2005 is described as Visual C# 2005.

Microsoft® Visual Basic 2012 is described as Visual Basic 2012.

Microsoft® Visual C# 2012 is described as Visual C# 2012.

Network Camera is referred as Camera.

Camera models are listed only for representative models of the series

Please refer to [PS-API Supported Product List for English] document for camera series

Network Interface Unit is referred as Encoder.

Network Disk Recorder is referred as NWDR.

Network Disk Recorder (NX series, NU series) is referred as NX series.

Digital Disk Recorder (HD300 series) is referred as HD300.

Digital Disk Recorder (HD600 series, HD700 series) is referred as HD600/700.

1.5. Structures of PS-API

Figure 1-1 shows the PS-API structures.

Figure 1-1 PS-API Structures

1.6. Overview of Functions

Table 1-1 shows the overview of functions.

Table 1-1 Function Overview

No.	Overview	Reference
1	Login / Logout	PS Build Group
2	Search the recorded video data. (Network Disk Recorder, Digital Disk Recorder)	Device Group
3	Control recording. (Network Disk Recorder, Digital Disk Recorder)	
4	Display live image.	Video Group
5	Display playback image via network. (Network Disk Recorder, Digital Disk Recorder)	
6	Control playback such as Fast Forward and Rewind. (Network Disk Recorder, Digital Disk Recorder)	
7	Image recognition. (Only for supported devices)	
8	Digital zoom, Overlay	
9	Snap Shot	
10	MP4 or n3 file download(HTTP)	
11	Audio reception and transmission.	Audio Group
12	Control a camera. (Pan, Tilt, Zoom, Auto Back Focus functions, Super Dynamic function, etc)	Operation Group
13	Control AUX (Camera and Encoder)	
14	Control alarms.	Alarm Group
15	FTP download	FTP Group
16	Notify the event of Mouse operation.	MouseEvent Group

1.7. Function List

Table 1-2 shows the functions provided in this PS-API.

Table 1-2 List of Functions

Method

No.	Object	Method	Overview	Reference
<i>PS Builder Group</i>				
1	PSAPI Control	Open	Log in to the device, and get UID.	
2	PSAPI Control	Connect	Connect to the device with the specified UID which other instance got by the login.	
3	PSAPI Control	Close	Stop the HTTP connection, and log out from the device.	
4	PSAPI Control	Disconnect	Stop the HTTP connection.	
5	PSAPI Control	ClearWaitingFunc	Cancel the waiting function of async type method.	
6	PSAPI Control	GetWaitingFuncCount	Get the waiting function of async type method count.	
7	PSAPI Control	GetLoginStatus	Get login result. If login failure, the reason of failure returns.	
8	PSAPI Control	GetUIDInfo	Get the maximum number of UID that recorder can issue and the number of UID which is in use.	
9	PSAPI Control	GetSIDInfo	Get the information of StreamID support, the maximum number of StreamID that recorder can issue, and the number of StreamID which is in use.	

No.	Object	Method	Overview	Reference
<i>Device Group</i>				
1	PSAPI Control	GetDeviceStatus	Get the device status.	
2	PSAPI Control	RecCtrl	Turn on and off the manual recording.	
3	PSAPI Control	GetRecCtrlStatus	Get recording status.	
4	PSAPI Control	Search	Search the recording event. Time zone information is NOT included in search results.	
5	PSAPI Control	SearchEx	Search the recording event. Time zone information is included in search results.	
6	PSAPI Control	VmdSearchEx	Do VMD search.	
7	PSAPI Control	SearchCancel	Cancel the executing Search/SearchEx/VmdSearchEx function.	
8	PSAPI Control	GetDeviceLog	Get the recording device logs.	
9	PSAPI Control	GetDevTimeZone	Get time zone information and summer time In/Out time table.	
10	PSAPI Control	GetDevCurrentInfo	Get the device information and hold it.	
11	PSAPI Control	GetInfoString	Get a value from the kept information that was gotten by GetDevCurrentInfo method.	
12	PSAPI Control	SetCameraTime	Set specified time to a target device.	
13	PSAPI Control	GetStatisticsData	Get statistics data from NV200 ,NV250 ,NV300 and NX Series.	
14	PSAPI Control	SetUIDPriority	Change the UID priority mode of ND400, NV200,NV250,NV300, NX Series and HD600/700.	

No.	Object	Method	Overview	Reference
<i>Video Group</i>				
1	PSAPI Control	GetFrameTime	Get the frame time and date of the recorded video play.	
2	PSAPI Control	PlayLive	Start live video play.	
3	PSAPI Control	Play	Start recorded video play.	
4	PSAPI Control	PlayFile	Start video play from a specified video file.	
5	PSAPI Control	PlayControl	Control video play. that was started by PlayLive/Play/PlayFile method (Forward, Pause, etc)	
6	PSAPI Control	PlayControlByTime	Jump to the specified date and time,	
7	PSAPI Control	GetPlayStatus	Get current video play status.	
8	PSAPI Control	GetPlaySpeed	Get current video play speed.	
9	PSAPI Control	GetFrameRate	Get current playing video stream frame rate.	
10	PSAPI Control	GetPicturePosition	Get the position of the displayed picture except black panels.	
11	PSAPI Control	GetImageResolution	Get the displayed image resolution.	
12	PSAPI Control	ClearImage	Clear the image that is displayed on the screen.	
13	PSAPI Control	SaveJpegImage	Store the displayed image in a jpeg format file.	
14	PSAPI Control	GetJpegImage	Get the displayed image with jpeg format.	
15	PSAPI Control	SaveBitmapImage	Store the displayed image in a bitmap format file.	
16	PSAPI Control	GetBitmapImage	Get the displayed image with bitmap format.	
17	PSAPI Control	TitleOperation	Draw text strings on the displayed image.	
18	PSAPI Control	TitleOperationEx	Draw text strings on the displayed image. (with transmissivity)	
19	PSAPI Control	GetTitle	Get the text strings that is displayed on the video image by using TitleOperation.	
20	PSAPI Control	BoxOperation	Display frame lines on the video image.	
21	PSAPI Control	BoxOperationEx	Display frame lines on the video image. (with transmissivity)	
22	PSAPI Control	BitmapOperationEx	Display bitmap image on the video image. (with transmissivity)	

No.	Object	Method	Overview	Reference
23	PSAPI Control	DigitalZoomMove	Move the displayed area during working a digital zoom.	
24	PSAPI Control	GetDigitalZoomPosition	Get the current position of the displayed area in the original image with digital zoom.	
25	PSAPI Control	MultiSyncPause	When using PlayControl with multi screen, pause to synchronize with other screen.	
26	PSAPI Control	MultiSyncTime	When using PlayControl with multi screen, set the sync time to synchronize with other screen.	
27	PSAPI Control	CamSnapShot	Get the snapshot image from NW camera or Encoder, and display it.	
28	PSAPI Control	SetCroppingRect	Set the Cropping Position.	
29	PSAPI Control	GetCroppingRect	Get the Cropping Position.	
30	PSAPI Control	SetCroppingDrawRect	Set the Draw Position in Cropping function.	
31	PSAPI Control	GetCroppingDrawRect	Get the Draw Position in Cropping function.	
32	PSAPI Control	SetCroppingDrawEnabled	Set Hide/Show each id of Cropping function.	
33	PSAPI Control	GetCroppingDrawEnabled	Get Hide/Show each id of Cropping function.	
34	PSAPI Control	SetCroppingMarker	Set the Marker that indicate the Cropping Position.	
35	PSAPI Control	GetCroppingMarker	Get the Marker that indicate the Cropping Position.	
36	PSAPI Control	HttpMP4Download	Download the MP4 file via HTTP from a NX Series.	
37	PSAPI Control	HttpDownload	Download the MP4 or n3 file via HTTP from a NX Series.	
38	PSAPI Control	GetMP4DownloadStatus	Get MP4 or n3 file downloading status.	
39	PSAPI Control	GetMP4DownloadtransRate	Get transfer speed in MP4 or n3 file downloading.	
40	PSAPI Control	SetMP4DownloadListener	Register OnMP4DownloadStatus Listener function for an application.	

No.	Object	Method	Overview	Reference
<i>Audio Group</i>				
1	PSAPI Control	AudioSend	Start or Stop the audio transmission.	
2	PSAPI Control	GetAudioSendStatus	Get the audio transmission status.	
<i>Operation Group</i>				
1	PSAPI Control	CameraControl	Send Pan, Tilt, Focus, Zoom, Iris command to the specified camera.	
2	PSAPI Control	SetCameraPosition	Set Pan, Tilt, Zoom and Focus values in absolute angle.	
3	PSAPI Control	GetCameraPosition	Get Pan, Tilt, Zoom and Focus values in absolute angle.	
4	PSAPI Control	CameraOperation	Operate camera such as auto track, auto pan, auto focus.	
5	PSAPI Control	SetOpListener	Register OnOpStatus Listener function for an application.	
6	PSAPI Control	CameraCentering	Control the camera to the specified position becomes the center.	
7	PSAPI Control	CameraAuxControl	Control the AUX terminal of camera and encoder to OPEN/CLOSE.	
8	PSAPI Control	GetCameraAuxStatus	Get AUX terminal status of camera and encoder.	
9	PSAPI Control	SetCameraImageCap	Set a Image capture mode and installation of camera.	
10	PSAPI Control	CameraWiperControl	Operate camera wiper function.	
<i>Alarm Group</i>				
1	PSAPI Control	AlmOperation	Reset current device alarm state. Or trigger a device alarm by the application.	
2	PSAPI Control	GetAlarmStatus	Get current alarm information.	

No.	Object	Method	Overview	Reference
<i>FTP Group</i>				
1	PSAPI Control	FtpGet	Download the video/ audio/ recording event list via FTP from a recording device.	
2	PSAPI Control	FtpCancel	Cancel FTP download.	
3	PSAPI Control	FtpServerClose	Turn off the FTP server mode on a target device.	
4	PSAPI Control	GetFtpStatus	Get Ftp downloading status.	
5	PSAPI Control	GetFtpTransRate	Get transfer speed in FTP downloading.	
6	PSAPI Control	GetFtpTransByte	Get transferred byte count in FTP downloading.	

Event

No.	Object	Event	Overview	Reference
<i>PS Builder Group</i>				
1	PSAPI Control	OnError	The OnError notification function is to pass error code from PS-API to the application.	
<i>Device Group</i>				
1	PSAPI Control	OnDevStatus	The OnDevStatus notification function is to pass device connection status between recorder and camera from PS-API to the application.	
2	PSAPI Control	OnRecStatus	The OnRecStatus notification function is to pass Recorder status from PS-API to the application.	
3	PSAPI Control	OnRecStatusCB	The Recording control callback function is to pass application recording control result from PS-API to the application.	
4	PSAPI Control	OnSearchCB	The Search callback function is to send the notification from PS-API to the application when the search finishes.	
5	PSAPI Control	OnSearchExCB	The SearchEx / VMDSearchj callback function is to send the notification from PS-API to the application when the search finishes.	
<i>Video Group</i>				
1	PSAPI Control	OnPlayStatus	The OnPlayStatus notification function is to pass play status from PS-API to the application.	
2	PSAPI Control	OnRecoedStatus	The OnRecordStatus notification function is to pass the recording data status (beginning or the ending) from PS-API to a specified application.	
3	PSAPI Control	OnImageRefresh	The OnImageRefresh notification function is to pass image data with specified type from PS-API to the application.	
4	PSAPI Control	OnPlayStatusCB	The play status callback function is to pass video play status from PS-API to the application.	

No.	Object	Event	Overview	Reference
<i>Video Group</i>				
5	PSAPI Control	OnMP4DownloadStatus	The OnMP4DownloadStatus notification function is to pass file downloading status change from PS-API to a specified application.	

No.	Object	Event	Overview	Reference
<i>Operation Group</i>				
1	PSAPI Control	OnOpStatus	The OnOpStatus notification function is to pass camera operation status from PS-API to the application.	
2	PSAPI Control	OnOpStatusCB	The operation status callback function is to pass camera operation status from PS-API to the application request.	
<i>Alarm Group</i>				
1	PSAPI Control	OnAlmStatus	The alarm status change notification function is to pass alarm status from PS-API to the application.	
2	PSAPI Control	OnAlmStatusCB	The alarm status callback function is to pass alarm operation state from PS-API to the application request.	
<i>FTP Group</i>				
1	PSAPI Control	OnFtpStatusCB	The FTP status callback function is to pass FtpGet state from PS-API to a specified application request.	
<i>MouseEvent Group</i>				
1	PSAPI Control	MouseDown	This event occurs when the mouse pointer is onto OCX control and the mouse button is down.	
2	PSAPI Control	MouseUp	This event occurs when the mouse pointer is onto OCX control and the mouse button is up.	
3	PSAPI Control	DblClick	This event occurs when the mouse pointer is onto OCX control and the mouse button is double clicked.	
4	PSAPI Control	MouseMove	This event occurs when the mouse pointer is onto OCX control and the mouse pointer is moved.	
5	PSAPI Control	MouseWheel	This event occurs when the mouse pointer is onto OCX control and the mouse wheel is scrolled.	

1.8. Compatible chart by models

The following list shows the compatible chart by models.

Table 1-3 Compatible Chart by Models

No.	Method	Camera	NWDR	HD300	HD600/700	Encoder	NX Series	Remarks
<i>PS Builder Group</i>								
1	Open	Yes	Yes	Yes	Yes	Yes	Yes

6	GetFtpTransByte	-	Yes	Yes	Yes	-	Yes	

*1 : NV200 , NV250 and NV300 is not supported.

*2 : ND200 and ND300 are not supported.

*3 : In case of HD300, time zone information cannot be got and is set to "0".

*4 : NP1000 is not supported.

*5 : In case that the target device is ND200, time zone depends on the device's time zone.

And in case that the target device is ND300 or ND400, time zone depends on the connected camera's time zone

*6 : Time zone cannot be got and is set to "0".

*7 : In case of network playback, to specify playback speed directly is not supported for HD300.

*8 : In case of PlayLive, frame rate cannot be got and is set to "0".

*9 : In case of MPEG-4/H.264/H.265(not JPEG), frame rate cannot be got and is set to "0" or "300".

*10 : Depends on models whether PTZ, Preset, Auto back focus, Super Dynamic, AUX control, preset sequence, auto sort and patrol are supported or not.

*11 : Can specify No-operation and Reset control only.

*12 : When NVF20,NVF30 is available, the function of statistics download works.

*13 : Only ND400 , NV200 , NV250 and NV300 is supported.

*14 : Only 360-degree Network Camera (SF438 series, SW458 series, SF448 series, SFV481 series, S4550 series, X4571 series, S4551 series, X4573 series) is supported.

*15 : SUD638 is only supported.

2. System requirements

2.1. System Environment

The following table shows the PC specification that is needed for installing PS-API.

Table 2-1 OS

OS	Microsoft® Windows® 7 Professional SP1 32 bit Edition(*6)
	Microsoft® Windows® 7 Professional SP1 64 bit Edition(*6)
	Microsoft® Windows® 8.1 Pro 32 bit Edition(*3)
	Microsoft® Windows® 8.1 Pro 64 bit Edition(*3)
	Microsoft® Windows® 10 Pro 32 bit Edition
	Microsoft® Windows® 10 Pro 64 bit Edition
	Microsoft® Windows® 11 Pro
	Microsoft® Windows Server® 2008 R2 Standard SP1 (*1)(*2)(*6)
	Microsoft® Windows Server® 2008 R2 Enterprise SP1 (*1)(*2)(*6)
	Microsoft® Windows Server® 2012 Standard(*1) (*2)
	Microsoft® Windows Server® 2012 R2 Standard(*1) (*2)
	Microsoft® Windows Server® 2016 Standard(Desktop Experience) (*1)
	Microsoft® Windows Server® 2019 Standard(Desktop Experience) (*1)
	Microsoft® Windows Server® 2022 Standard(Desktop Experience) (*1)

Table 2-2 Minimum System requirements

Processor(*4)	Intel® Core™2 Quad 2.66GHz or more
Memory(*4)	2.0GB or more
Hard drive	10GB or more
LAN	100Mbps or more

Table 2-3 Recommended system requirements

Processor(*4)	Intel® Core™i7-4790
Memory(*4)	8.0GB or more(*5)
Hard drive	10GB or more
LAN	100Mbps or more

(*1) “GetJpegImage” method and “GetBitmapImage” method does not work.

(*2) When using PS-API, it is necessary to install “Desktop Experience” to use Direct Show Filter functions.

(*3) Modern UI is not supported.

(*4) Requirement spec depends on the screen number and the video setting.
When using for the multiple screen application and/or retrieving H.264/H.265 video image,
please use PS-API with the recommended system requirements.

In case of H.264/H.265 video streaming, you may be able to display mode video streams by the PS-API settings which DecResolutionMode is set to 3 and the value of H264Resolution is reduced.

(*5) Please use two same Memorys that dual-channel supported.

(*6) Windows® Internet Explorer® 11 or later is recommended.

2.2. Development Environment

The following table shows the development environment list that is supported by PS-API OCX.

Table 2-4 Development Environment

Target	Development Tool
PS-API OCX	Visual Basic 2005 SP1
	Visual C# 2005 SP1
	Visual Basic 2012
	Visual C# 2012

2.3. Supported i-PRO Products

Please refer to **[PS-API Supported Product List for English]** document.

3. Setup

3.1. Product

Please refer to [PS-API Installation Guide for OCX] document.

Table 3-1 The Overview of Files

[OCX folder]

Directory Name	Objective
PS-API redistributable	OCX files/DLL files Redistributable.
PS-API Setup	Installer for OCX control and DirectShow filters. For development. NOT REDISTRIBUTABLE.
PS-API Tool	Test tool. By using this tool, you can confirm connecting to a target device with PS-API. NOT REDISTRIBUTABLE.
PS-API Document	The users manual. (This document) NOT REDISTRIBUTABLE.

Directory Name	Objective
PS-ALARM redistributable	OCX files/DLL files Redistributable.
PS-ALARM Document	The users manual. NOT REDISTRIBUTABLE.

Directory Name	Objective
PS-LOOKUP redistributable	OCX files/DLL files Redistributable.
PS-LOOKUP Document	The users manual. NOT REDISTRIBUTABLE.

[OCX-Sample folder]

Directory Name	Objective
Sample Program	Sample Programs. NOT REDISTRIBUTABLE.

3.2. Install

Please refer to [**PS-API Installation Guide for OCX**] document.

3.3. UnInstall

Please refer to [**PS-API Installation Guide for OCX**] document.

3.4. Control name and Class ID

The following information are Control name and Class ID of PS-API.

Control name	:	ipropsapiCtrl
Class ID (CLSID)	:	69ADBDBE-2035-4144-B52E-14753EB07CE9

3.5. Restrictions

- (1) Do not use the Power Schemes or System Standby mode of Windows®.
- (2) PS-API instance is NOT thread safe.
- (3) PS-API controls the Digital Disk Recorder/Network Disk Recorder with a UID provided from the Digital Disk Recorder/Network Disk Recorder. The maximum number of provided UIDs is shown on the following table.

Recorder	Maximum UID number
HD300	8
ND200	4
ND300	8
ND400	16
NV200 (*1)	4
NV250 (*1)	4
NV300(*1)	8
NX100(*1)	16
NX200(*1)	16
NX300(*1)	16
NX400(*1)	16
NX310(*1)	16
NX410(*1)	16
NX510(*1)	16
NU101(*1)	16
NU201(*1)	16
NU300/301(*1)	16
HD600/700	8

*1 : In case of NV200, NV250, NV300, NX Series up to 16 instances can work PlayLive/Play with the sharing UID at the same time.

Refer to "4.2 Connect to the device (Advanced usage for connection with recorder)" for further information about UID.

- (4) In case of connection with Digital Disk Recorder/Network Disk Recorder, when 8 UIDs (in case of ND400 : 16 UIDs) are already used and a new user is going to get a UID, the priority of UID publication depends on the target device setting.
- (5) When "ON" is selected for "User Authentication" on the Digital Disk Recorder/Network Disk Recorder, a user with a higher user level will have a priority to have a valid UID and a UID given for the instance of a user with a lower user level will be invalidated. (Refer to the operating instructions of the Digital Disk Recorder/Network Disk Recorder for further information about "User Authentication").
- (6) The limitation of stream count that transmit live video from network camera or encoder is different between models or usage conditions. Regarding the details, please refer to CGI specification document of network camera.
- (7) The audio reception supports G.726 and AAC. The audio transmission supports only G.726.
- (8) In case of using multiple instances, please do not use AAC Format.

(9) The application that includes PS-API must be compiled by 32bit(x86) setting.

(10) Video delay may occur in the case of [resolution:2992*2992, frame rate:30ips] stream.
In that case, it may be improved with one of the following settings.

Proposal(1) Set the transmission priority of the camera to [VBR].

*When there is temporary large number of video changes, video delay occurs.
After that, when the video change decreases, the delay is gradually eliminated.

Proposal(2) Set the camera bit rate to 3.5Mbps or less.

*Please check the image delay and image quality and set appropriate values.

Proposal(3) please use the camera's frame rate "15ips(default)".

(11) [resolution: 2192x2192, frame rate:30ips] stream if it is displayed on 4K monitor, video delay may occur. In that case, it may be improved by adding a graphic board.

(*Operation confirmed graphic board: NVIDIA Quadro P600)

4. Overview of Library

4.1. Connect to the device

When the application connects to a network camera or a recorder by using PS-API, it is necessary that IP address, User name and Password are set first, and then Open() method is called.

(Refer to 5.2.1.1 Open.)

After execute Open() method, Application can use every method.

For HTTPS connection, set the SecureCommunicationMode, CertificateVerifyEnable and HttpPort properties, before executing the Open method..

(Refer to 5.2.2.17.SecureCommunicationMode, 5.2.2.18 CertificateVerifyEnable)

Notes on initial values of device

NW cameras and NX series have HTTP/HTTPS connection setting.

The initial value of many devices is "HTTP or HTTP&HTTPS", and HTTP connection is possible,

The initial value of NU recorder and NX310/NX410/NX510 is "HTTPS", so it will be HTTPS connection.

Set the SecureCommunicationMode property with PS-API according to the device settings.

Initial value of NU recorder

Security between this product and PC	
Connection	HTTPS ▼

When stop connecting to the device, Application disconnects by using Close() method.

(Refer to 5.2.1.3 Close.)

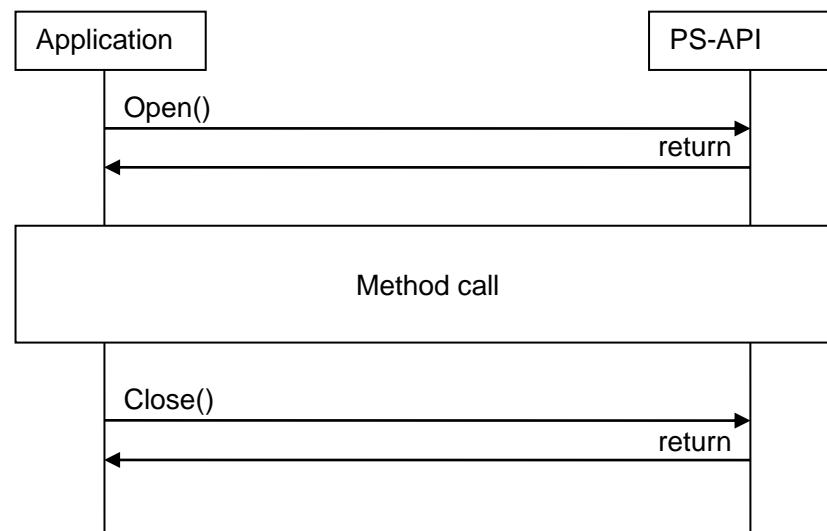

Figure 4-1 Connect to The Device

4.2. Connect to the device (Advanced usage for connection with recorder)

A recorder has the limitation of user connection count, and the connection count is managed by the count of UID that is delivered by a device.

When using Open() method, application gets one UID.

If you want to save the connection count (UID) when displaying multiple live images for plural channels, you can use Connect() method with one UID that one PS-API instance gets by using Open() method.

(Refer to 5.2.1.2 Connect.)

If stop the connection that is started by using Connect(), Application disconnects by using Disconnect() method.

(Refer to 5.2.1.4 Disconnect.)

NOTE

For NU101/NU201/NU300/NU301 and NX310/NX410/NX510, the return value of Open is an UID converted from UID inside PS-API. The converted UID can be used as an argument for the Connect() method.

To get the recorder's original UID, please use UIDEx() property.

NOTE

The following functions can work by using the shared UID. (*1) But when using the shared UID, there are some restrictions of the usage. Please refer to 4.3 Restrictions of the usage when using the shared UID .

- (1) Live.
- (2) FTP download
- (3) Network playback
- (4) MP4 or n3 file download via HTTP

*1 : In case of NV200, NV250, NV300, NX Series up to 16 instances can work PlayLive/Play with the sharing UID at the same time.

*2 : In case of sharing one UID, share within the same process.

If you want to start another process, get a new UID with the Open method

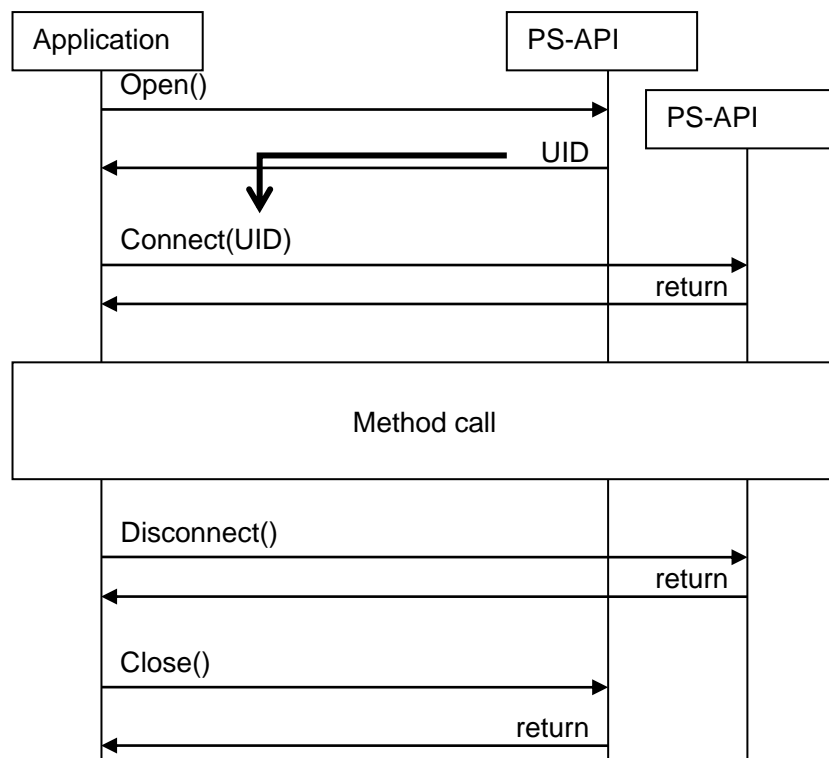

Figure 4-2 Connect to The Device (Advanced usage for connection with recorder)

4.3. Restrictions of the usage when using the shared UID

The instance that starts connection with Open() (hereafter referred as Instance-A) and the instance that starts connections with Connect() (hereafter referred as Instance-B) can be used for only Live, for only FTP download, for only MP4 or n3 file download via HTTP or for only network playback.

(1) Live

Case:

SIDMode property is 1, and Recorder that supports StreamID Mode

- On Instance-A and Instance-B, user can operate Live freely.

Case:

SIDMode property is 0, or Recorder that does not support StreamID Mode

- When using Instance-A for Live, Instance-B should be used for Live.
- When Instance-A and Instance-B share the same UID, they cannot show the same channel.

About StreamID Mode supported device or not is refer to [GetSIDInfo] method.

(2) FTP download

- When using Instance-A for FTP download, Instance-B should be used for FTP download.
- There is a limit to the number of the files which API can download at the same time.

(3) MP4 or n3 file download via HTTP

- When using Instance-A for file download, Instance-B cannot file download.

(4) Network playback

Case:

SIDMode property is 1, and Recorder that supports StreamID Mode

- On Instance-A and Instance-B, user can operate Network playback freely.

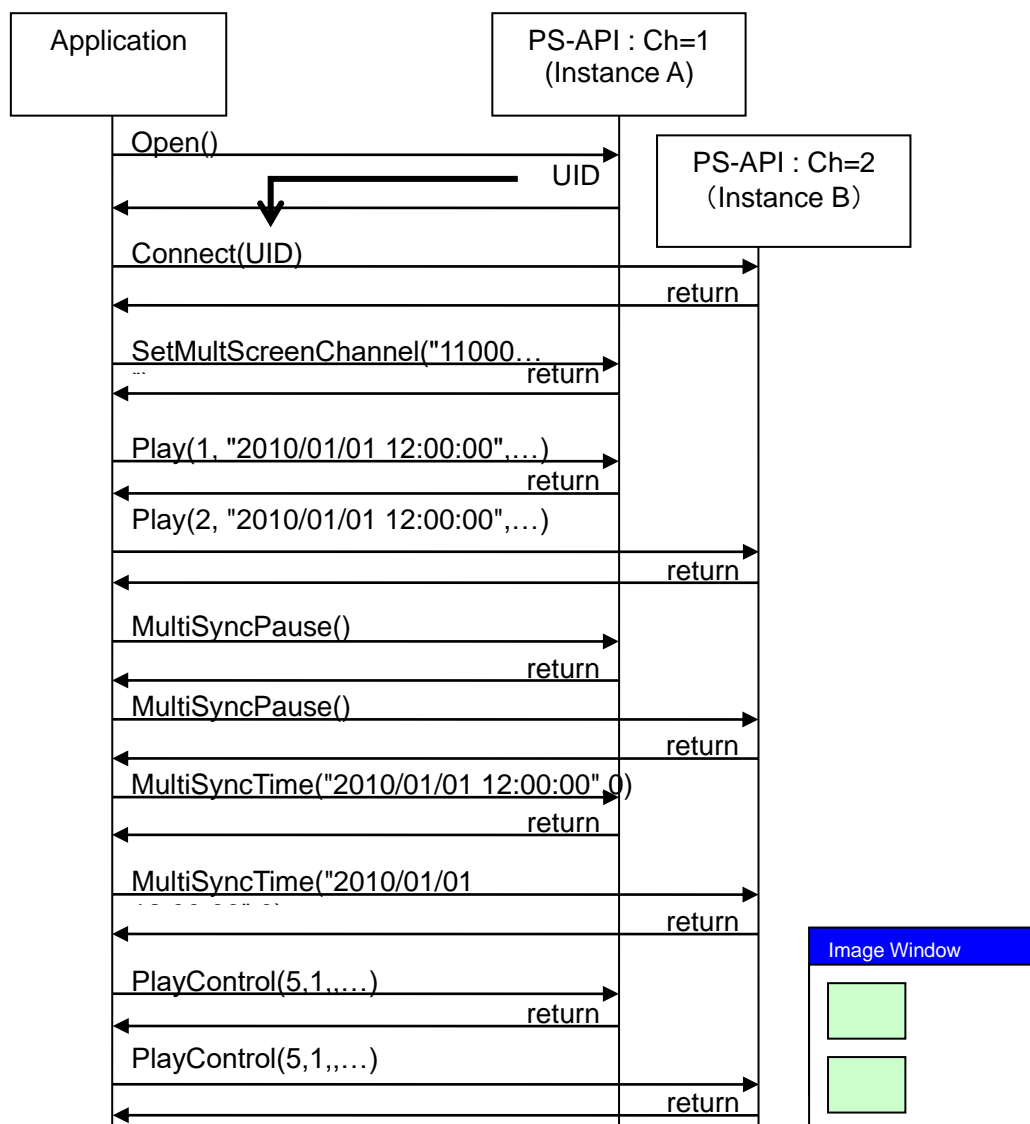

Case:

SIDMode property is 0, or Recorder that does not support StreamID Mode

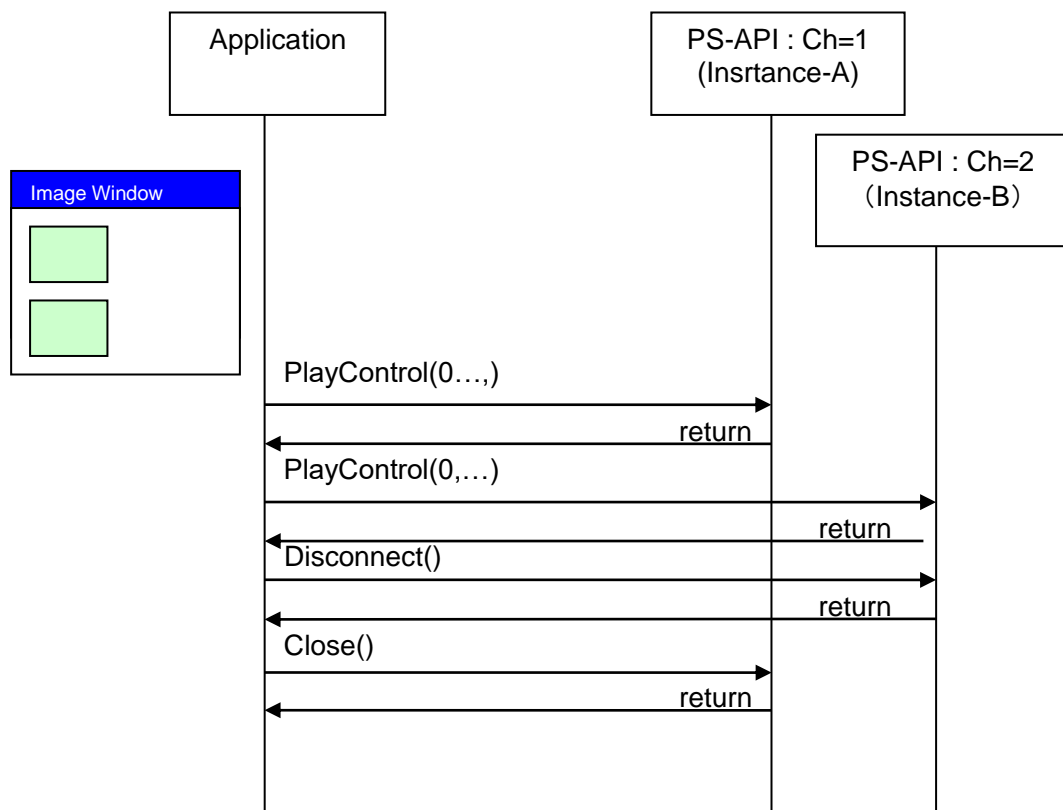

- When using Instance-A for network playback and playback control, Instance-B should be used for network playback and playback control.
- Before starts network playback, please specify the channels that you want to start playback by using SetMultiChannelScreen(). This method should be called at one instance.
If you call SetMultiChannelScreen() during network playback, unexpected result will be happen.
- When Instance-A and Instance-B share the same UID, they cannot show the same channel.
- When starts network playback with Play(), specify the same time and date to all instances that share UID.
- When starts playback control (Playback, Backward, Fast forward, Rewind) with PlayControl(), please calling MultiSyncPause method and MultiSyncTime method, and then specify the same operation to all instances that share UID. But PlayControl() cannot do Next frame, Previous frame, Next record, Previous record control.

About StreamID Mode supported device or not is refer to [GetSIDInfo] method.

[ND200 and ND300]

**Figure 4-3 Start a playback with Multiple-Channel
(Advanced usage for connection with recorder)**

**Figure 4-4 Stop a playback with Multiple-Channel
(Advanced usage for connection with recorder)**

4.4. Steps to control the device with PS-API

The following chart shows the flow that create instance, connect to device, register a window, start live, control PTZ and stop.

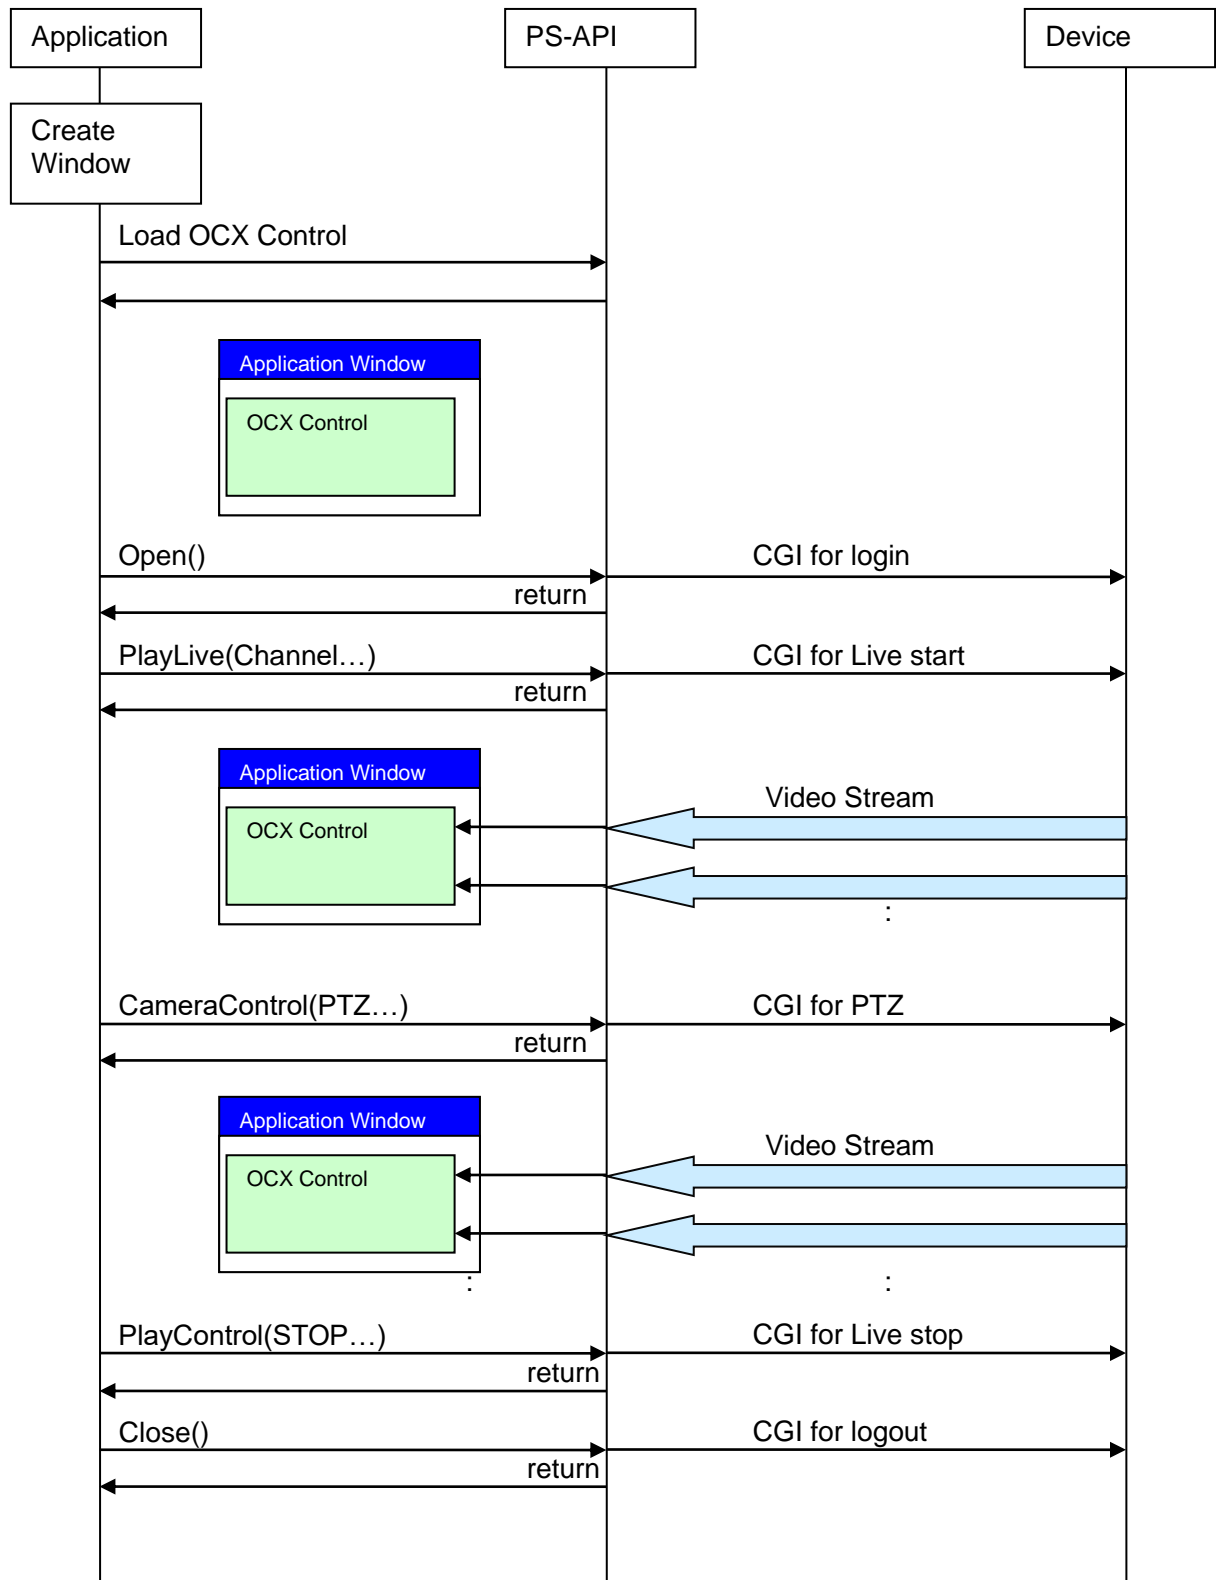

Figure 4-5 Steps to Control the Device with PS-API

4.5. Relationship between PS-API and Device

This chapter shows the relationship between PS-API and a device in case that an application connects to Network Camera or Recorder by using PS-API.

4.5.1. Display video images

One PS-API instance displays one video stream. The plural video streams cannot be displayed at the same time by using one PS-API instance.

- Connect to Network cameras

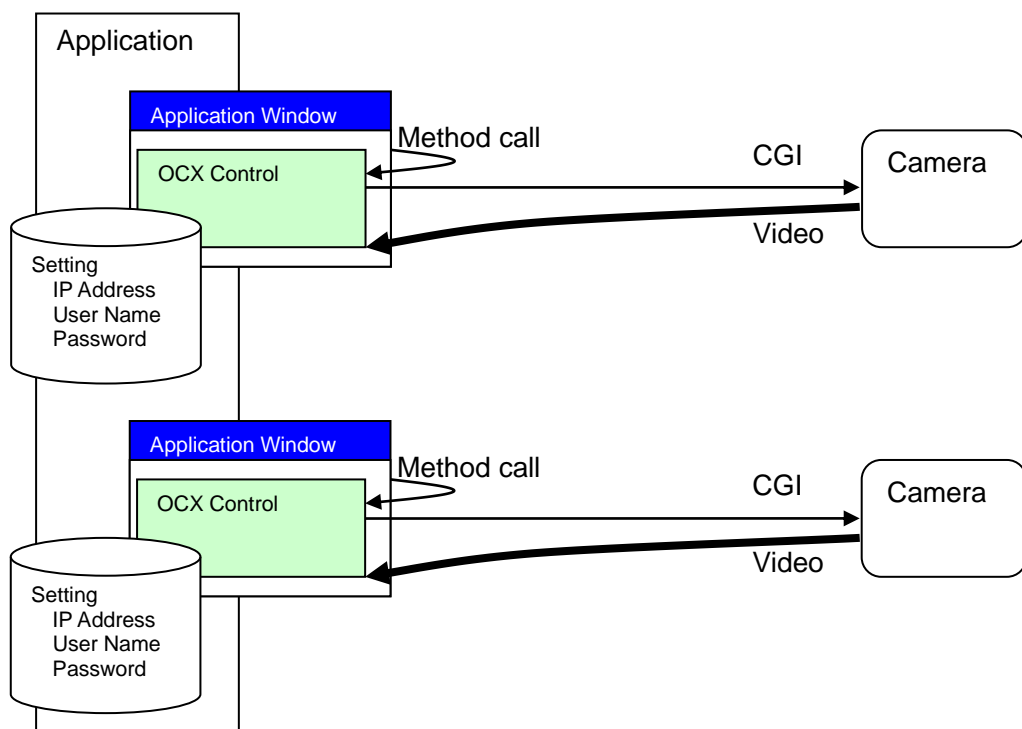

Figure 4-6 Connect to Network Cameras

- Connect to a recording device

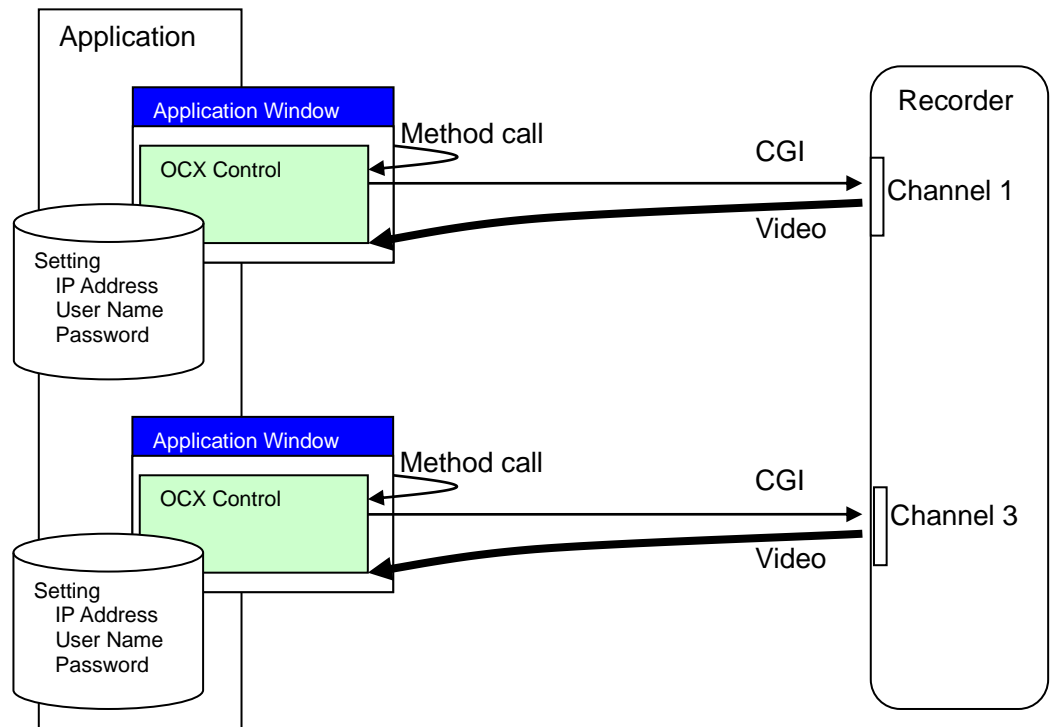

Figure 4-7 Connect to the Recording Device

It is possible to control plural devices from one instance.

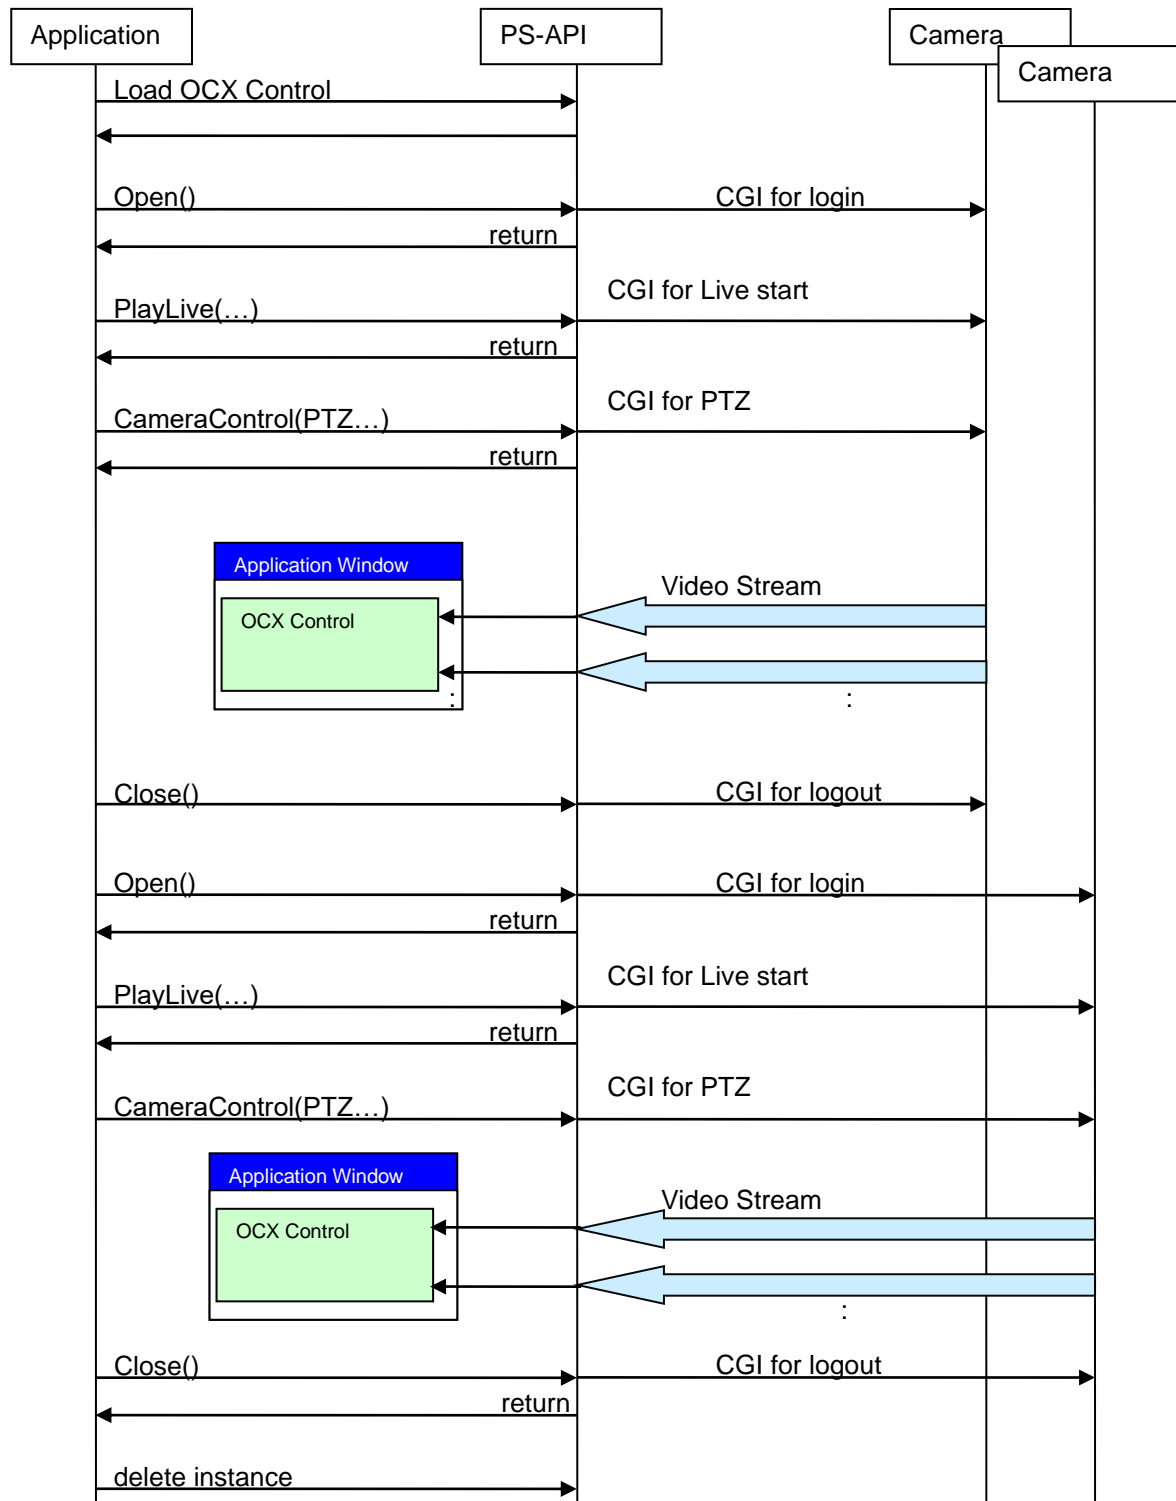

Figure 4-8 Control Plural Devices from One Instance

4.5.2. FTP download

Multiple files cannot be downloaded by using one PS-API instance at the same time. Please call the next download method after finish downloading. If using multiple instances, you can download several files at the same time.

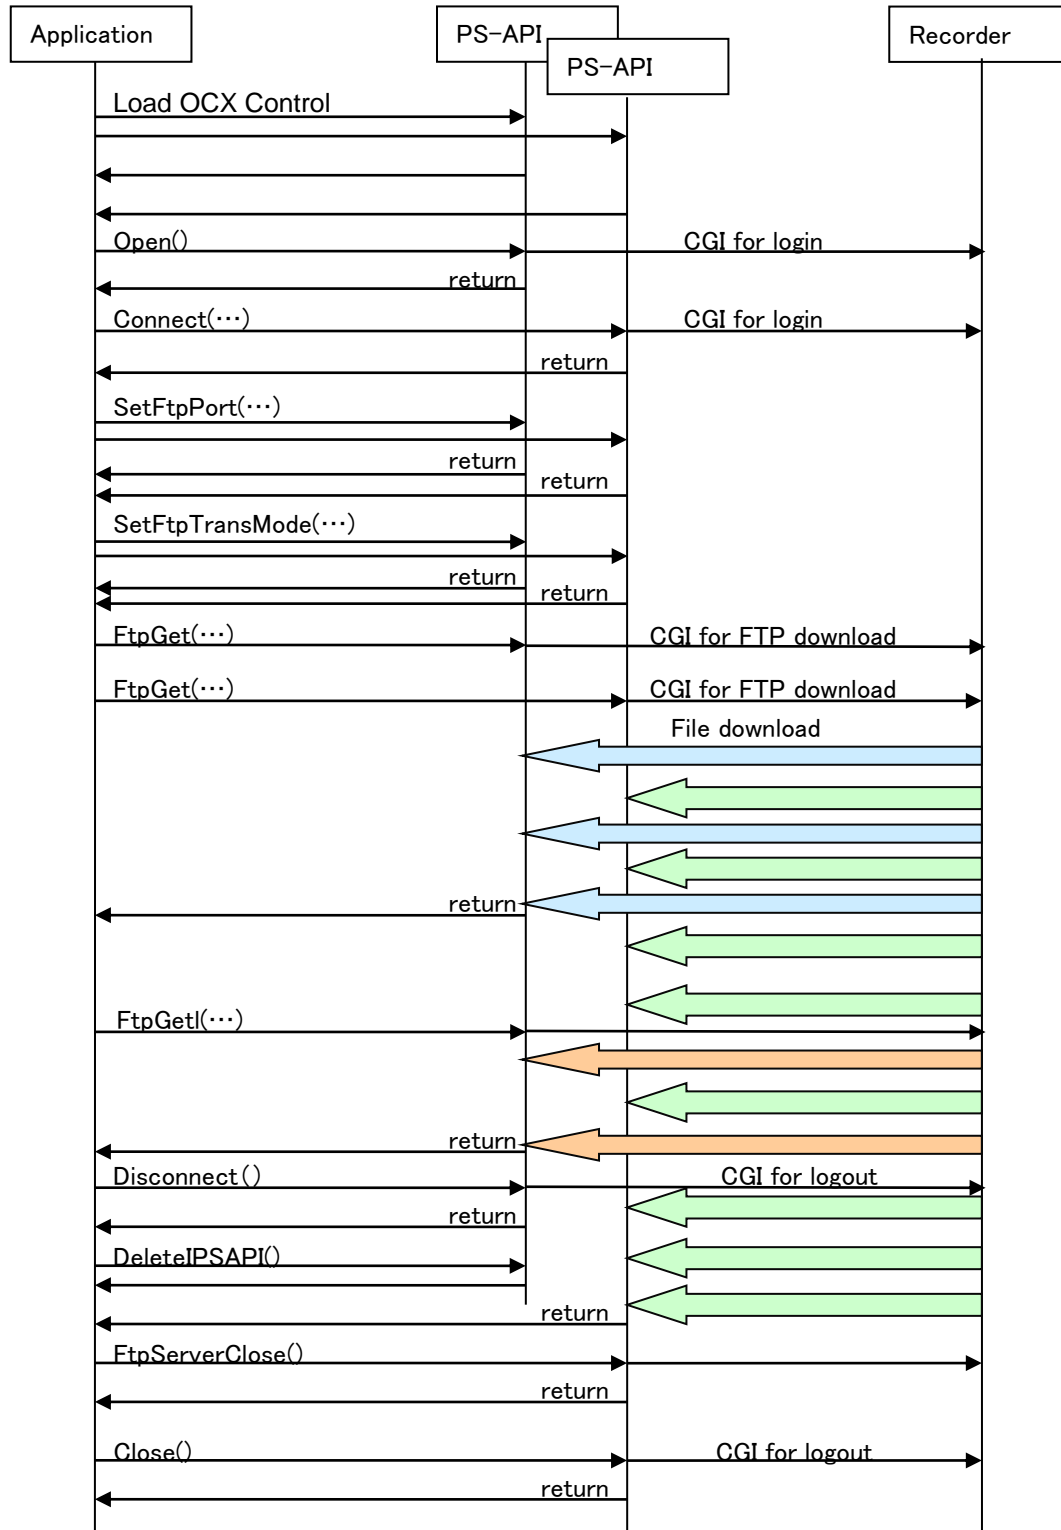

Figure 4-9 FTP Download from Multiple Instances

4.5.3. MP4 or n3 file download

Multiple files cannot be downloaded by using one PS-API instance at the same time. Please call the next download method after finish downloading. If using multiple instances, you can download several files at the same time.

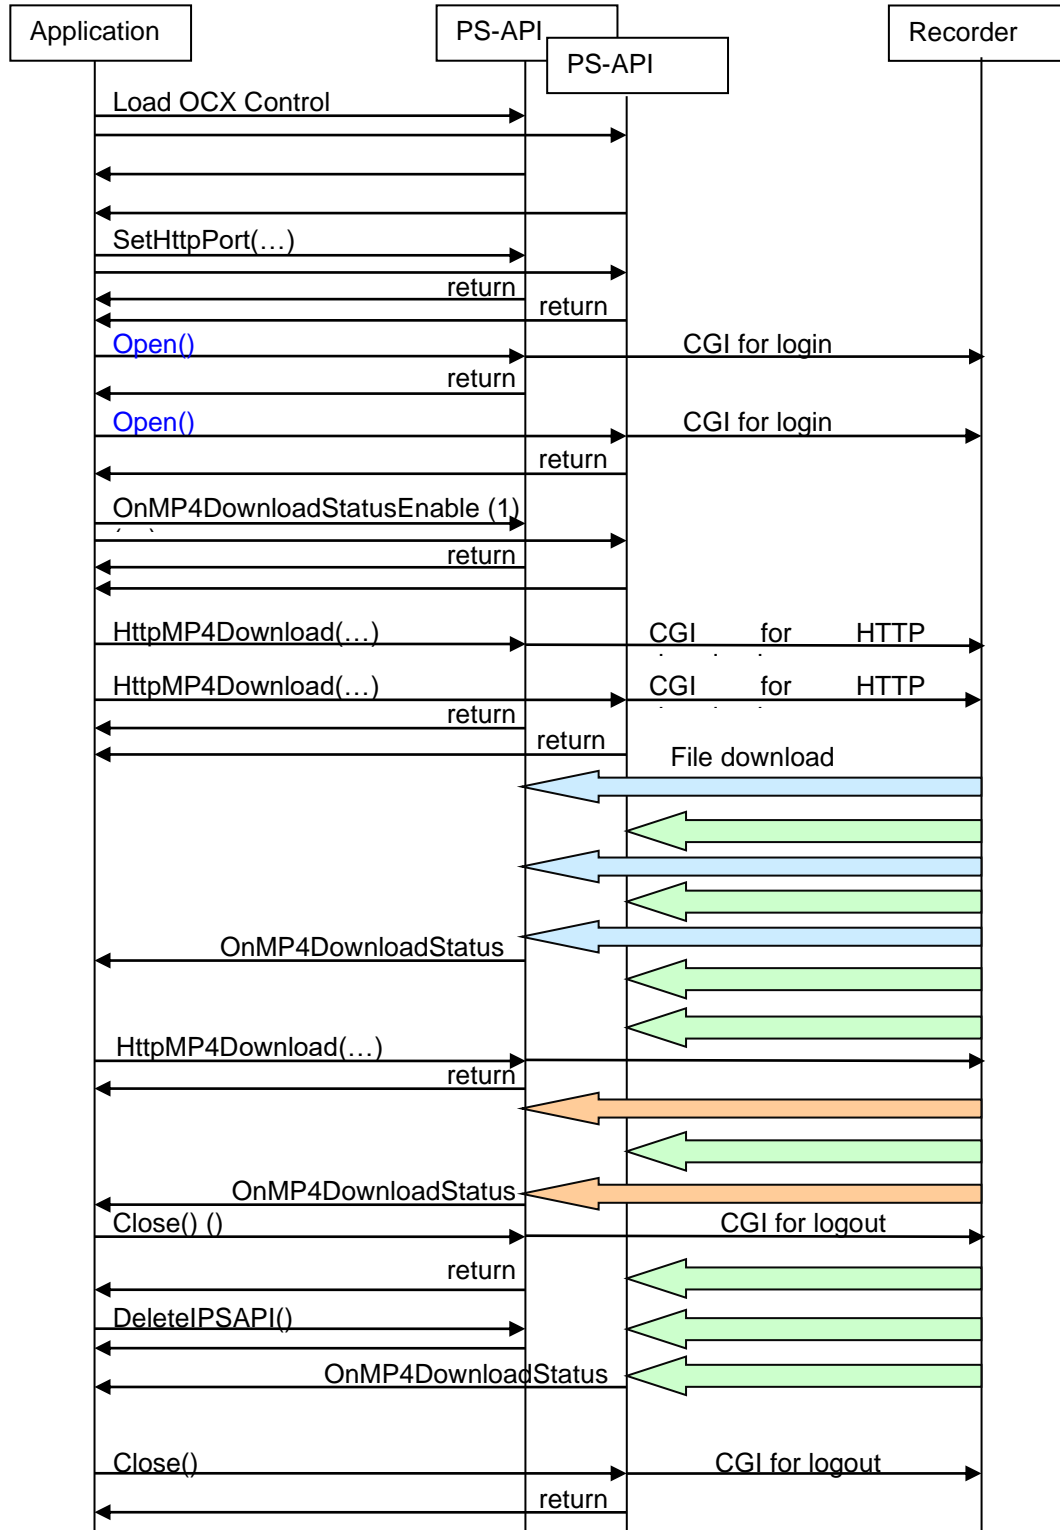

Figure 4-10 MP4 Download from Multiple Instances

4.6. Sync/Async Transaction Operation

In the case of using a PS-API instance, there are two ways of calling a method and a way of receiving a notification.

1. Synchronous method call
2. Asynchronous method call
3. Event notification

4.6.1. Synchronous method call

Synchronous method call is the general way. When a method of PS-API instance is called, the operation is blocked until the processing will be finished.

When calling the synchronous method during processing the asynchronous method, the synchronous method returns error because of “in processing”

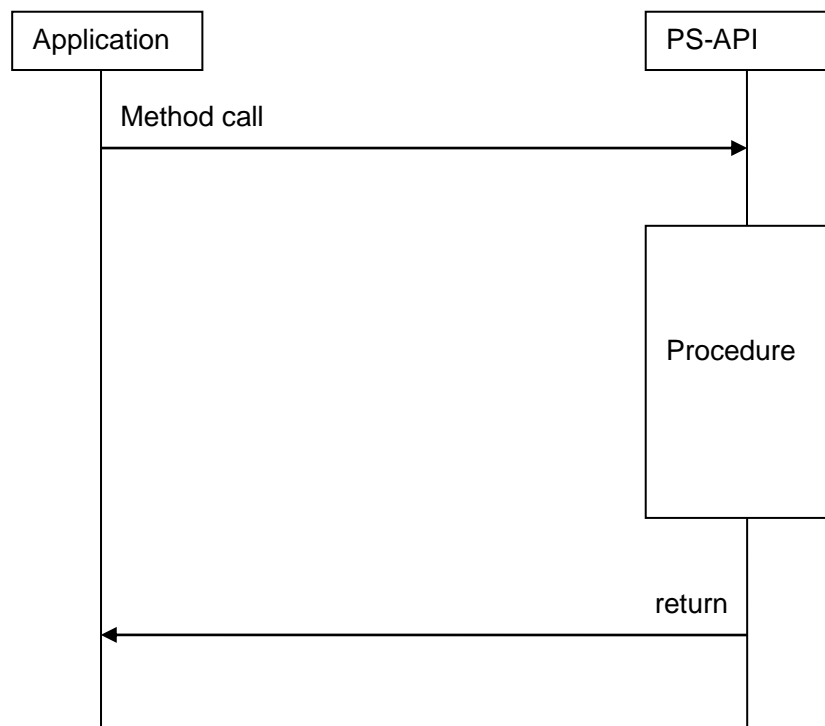

Figure 4-11 Synchronous Method Call

4.6.2. Asynchronous method call

Some methods can be used with the asynchronous mode. When the method of PS-API instance is called with asynchronous mode, PS-API starts processing, and then returns the return value before finishing processing.

When calling the asynchronous method during processing the asynchronous method, the method is in the queue and it will process on after another.

The asynchronous processing result of PS-API is notified via OnxxxxCB Event.

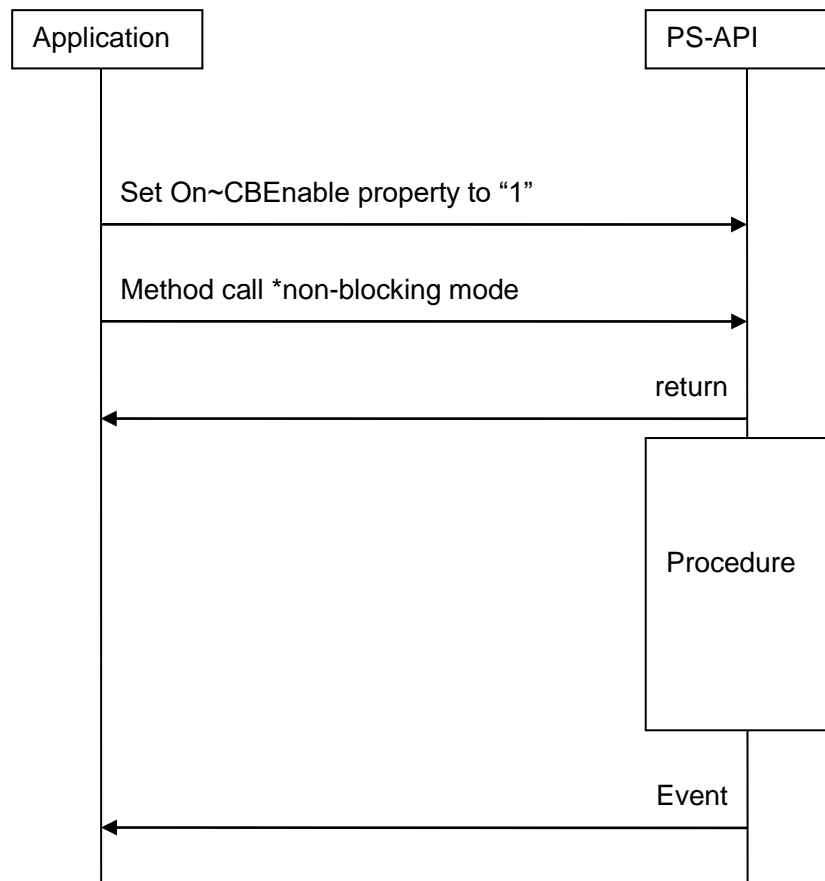

Figure 4-12 Asynchronous Method Call

4.6.3. Receiving a event notification

Application can receive the notification by Onxxxx event to PS-API.

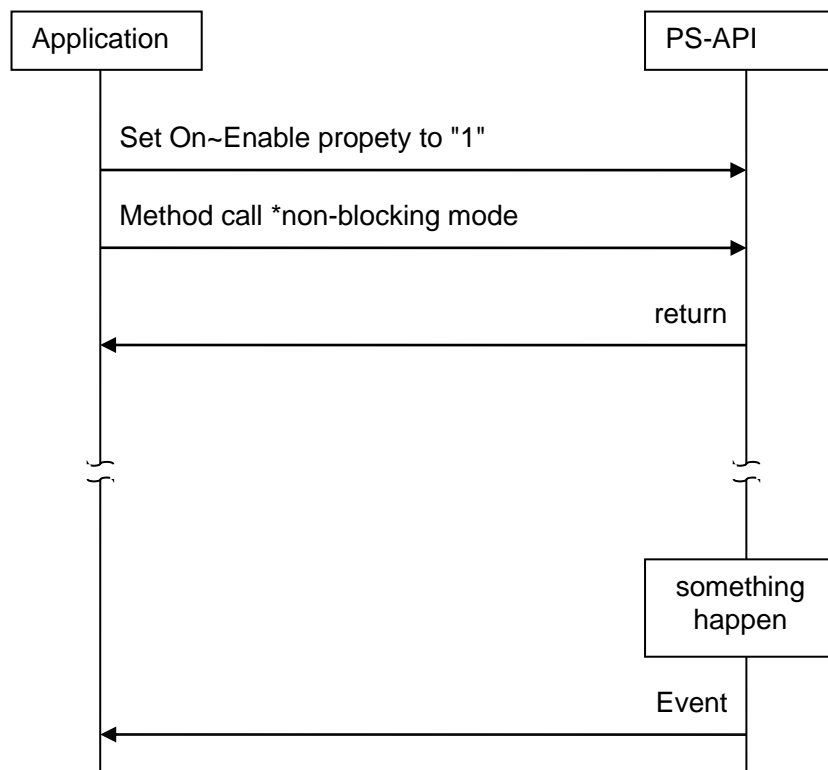

Figure 4-13 Receiving a Event Notification

4.7. About 360-degree Network Camera

When using 360-degree network camera, the behavior depends on the image capture mode of the Network Camera.

4.7.1. How to get the image capture mode of 360-degree network camera

The procedure of getting the image capture mode from 360-degree network camera is as follows.

(1) Execute "GetDevCurrentInfo()" method.

(2) Execute "GetInfoString()" method with "Fisheye_ImageMode"" as keyword.

[SF438 series, SW458 series, SF448 series]

Image capture mode	Value
3M Fisheye mode	3m_fisheye
1.3M Fisheye mode	1.3m_fisheye
1.3M Single PTZ mode	SinglePTZ
1.3M Quad PTZ mode	QuadPTZ
2M Panorama mode	panorama
1M Panorama mode	1m_panorama
2M Double panorama mode	wpanorama

4.7.2. The explanation if image capture mode of 360-degree network camera
The explanation of the image capture mode and the remarks are as follows.

[SF438 series, SW458 series, SF448 series]

Image capture mode	Remarks
3M Fisheye mode 1.3M Fisheye mode	- PlayLive function works as channel 1 regardless of the specified channel value.
1.3M Single PTZ mode	- PlayLive function works as channel 1 regardless of the specified channel value. - CameraControl/CameraCentering/CameraOperation works as channel 1 regardless of the specified channel value.
1.3M Quad PTZ mode	- PlayLive function works as channel 1 regardless of the specified channel value. - CameraCentering/CameraOperation works as channel 1 regardless of the specified channel value. - CameraControl works with channel parameter (1 to 4) to do Pan/Tilt/Zoom of each area. - When specify 1 or after number as the preset position, the screen of area 1 moves to the specified position. - When specify 0 (home position) as the preset position, the all screen move to the home position.
2M Panorama mode 1M Panorama mode	- PlayLive function works as channel 1 regardless of the specified channel value. - CameraControl/CameraCentering/CameraOperation is not supported with panorama mode. - If you call CamSnaoShot method with fisheye mode, a fisheye snapshot image cannot be gotten. (A panorama image will be displayed.)
2M Double panorama mode 1M Double panorama mode	- PlayLive function works as channel 1 regardless of the specified channel value. - CameraControl/CameraCentering/CameraOperation is not supported with Double panorama mode. - If you call CamSnaoShot method with fisheye mode, a fisheye snapshot image cannot be gotten. (A panorama image will be displayed.)

Image capture mode	Remarks
2 stream mode Panorama and Single PTZ Panorama and Quad PTZ	<ul style="list-style-type: none"> - PlayLive function works as channel 1 regardless of the specified channel value. - Stream 2 (Single PTZ or Quad PTZ) is not supported. - CameraControl/CameraCentering/CameraOperation is not supported with panorama mode.
2 stream mode Double panorama and Single PTZ Double panorama and Quad PTZ	<ul style="list-style-type: none"> - PlayLive function works as channel 1 regardless of the specified channel value. - Stream 2 (Single PTZ or Quad PTZ) is not supported. - CameraControl/CameraCentering/CameraOperation is not supported with Double panorama mode.
2 stream mode 2M Double panorama and Fisheye 1M Double panorama and Fisheye	<ul style="list-style-type: none"> - PlayLive function works as channel 1 regardless of the specified channel value. - Stream 2 (Fisheye) is not supported. - CameraControl/CameraCentering/CameraOperation is not supported with Double panorama mode
2 stream mode Fisheye and Quad PTZ	<ul style="list-style-type: none"> - PlayLive function works as channel 1 regardless of the specified channel value. - Stream 2 (Quad PTZ) is not supported.
2 stream mode 2M Panorama and Fisheye 1M Panorama and Fisheye	<ul style="list-style-type: none"> - PlayLive function works as channel 1 regardless of the specified channel value. - Stream 2 (Fisheye) is not supported. - CameraControl/CameraCentering/CameraOperation is not supported with panorama mode
VGA 4 stream mode	<ul style="list-style-type: none"> - Each channel (1 to 4) can be displayed with PlayLive function. - There is no 2nd stream. - CameraControl/CameraCentering/CameraOperation is not supported with panorama mode.

[SFV481 series]

Image capture mode	Remarks
9M Fisheye mode 4M Fisheye mode	- PlayLive function works as channel 1 regardless of the specified channel value.
Single PTZ mode	- PlayLive function works as channel 1 regardless of the specified channel value. - CameraControl/CameraCentering/CameraOperation works as channel 1 regardless of the specified channel value.
Quad PTZ mode	- PlayLive function works as channel 1 regardless of the specified channel value. - CameraOperation works as channel 1 regardless of the specified channel value. - CameraCentering works with channel parameter (1 to 4) to do centering of each area. - CameraControl works with channel parameter (1 to 4) to do Pan/Tilt/Zoom of each area. - When specify "0 to 4" as the preset position, the screen of area 1 moves to the position1, the screen of area 2 moves to the position2. the screen of area 3 moves to the position3, the screen of area 4 moves to the position4. When specify "5 to 8" as the preset position, the screen of area 1 moves to the position5, the screen of area 2 moves to the position6. the screen of area 3 moves to the position7, the screen of area 4 moves to the position8. the same is true as for "9-12","13-16"
Panorama mode	- PlayLive function works as channel 1 regardless of the specified channel value. - CameraControl/CameraCentering/CameraOperation is not supported with panorama mode. - If you call CamSnaoShot method with fisheye mode, a fisheye snapshot image cannot be gotten. (A panorama image will be displayed.)
Double panorama mode	- PlayLive function works as channel 1 regardless of the specified channel value. - CameraControl/CameraCentering/CameraOperation is not supported with Double panorama mode. - If you call CamSnaoShot method with fisheye mode, a fisheye snapshot image cannot be gotten. (A panorama image will be displayed.)

Image capture mode	Remarks
2 stream mode 8M Fisheye and Double panorama 4M Fisheye and Double panorama	<ul style="list-style-type: none"> - PlayLive function works as channel 1 regardless of the specified channel value. - Stream 2 (Double panorama) is not supported. - CameraControl/CameraCentering/CameraOperation is not supported with Fisheye mode

4.8. Restriction by device settings

4.8.1. Smart Cording

There are following restrictions when “Smart Coding mode” is set to “ON”, “ON(Low)” , “ON(Mid)” , “ON(High)” , “ON(Advanced)” in the “Transmission priority” setting of the camera.

(1) Live

[In the case of “ON” or “ON(Low)”]

- It may take 8 seconds at maximum for images to be displayed.

[In the case of “ON(Mid)” or “ON(High)”]

- It may take 16 seconds at maximum for images to be displayed.

(2) Network playback

[In the case of “ON” or “ON(Low)”]

- For playback, jump, and skip, it may take 8 seconds at maximum for images to be displayed.
- The speed rate for the fast playback may be increased compared to the standard setting.
(For example, images will be forwarded 32 seconds at maximum in Step 2.)
- The images may be seen stopped for 8 seconds at maximum in the frame playback or reverse frame playback.
- In playback with the alarm time and date, alarm images may not be displayed during playback.

[In the case of “ON(Mid)” or “ON(High)”]

- For playback, jump, and skip, it may take 16 seconds at maximum for images to be displayed.
- The speed rate for the fast playback may be increased compared to the standard setting.
(For example, images will be forwarded 64 seconds at maximum in Step 2.)
- The images may be seen stopped for 16 seconds at maximum in the frame playback or reverse frame playback.
- In playback with the alarm time and date, alarm images may not be displayed during playback.

[In the case of “ON(Frame rate control)”]

- It does not supported to the stream delivered with this setting.

5. Details of Functions

This chapter describes the detailed functions of OCX.

5.1. Object

5.1.1. Object Definition

Table 5-1 Object Definition

No.	Object Name	Overview
1	PSAPI Control	It is the OCX Control for using PS-API functions from an application. Display a video image and control a device by calling the method.

5.1.1.1. PSAPI Control

[method]

```
long    Open( );
long    Connect(long uid);

5.2. PS Builder Group

5.2.1. Method

5.2.1.1. Open

Object	PSAPI Control
Method	Open
long	Open();

Description

Log in to the device, and get UID.

Argument

None

Return value

Positive value	Success in connecting to the device. (HD300, NWDR, HD600/700, NX Series) The return value is UID.
0	Success in connecting to the device. (NW camera, encoder)
Negative value	Failure to connect to the device

Error

Get the error information by OnError event.

Note

Sequence

6.1 PlayLive

6.17 SSL

Reference

5.2.1.2. Connect

Object **PSAPI Control**

Method **Connect**

long Connect(
 long uid
);

Description

Connect to the device with the specified UID which other instance got by the login.

Argument

uid	Positive value	UID which other instance got.
-----	----------------	-------------------------------

Return value

0	Success in connecting to the device.
---	--------------------------------------

Except 0	Error code
----------	------------

Error

Error is defined by the return value.
Get the error information by OnError event.

5.2.1.7. GetLoginStatus

Object **PSAPI Control**

Method **GetLoginStatus**

long GetLoginStatus();

Description

Get login result. If login failure, the reason of failure returns.

Argument

None

Return value

-1	Open/Connect not executed.
0	Open/Connect success
1	(Recorder response) User excess
2	(Recorder response) Authentication error
3	(Recorder response) Network impossible
4	(Recorder response) Host attestation
5	(Recorder response) Config state
6	(Recorder response) In measurement
7	(Recorder response) Config user attestation
8	(Recorder response) Restarting state
9	(Recorder response) Sleep state
10	(Recorder response) Play only state
11	(Recorder response) No disk
12	(Recorder response) IP easy setup connected state
13	(Recorder response) Being configuration state
14	(Recorder response) Blackout
15	Other errors

Error

Get the error information by OnError event.

Note

For NX series models other than NX100, NX200, NX300, and NX400, when authentication error, "15" is notified instead of "2".

Reference

5.2.2.2. IPAddr

Object	PSAPI Control
---------------	----------------------

Property	IPAddr
-----------------	---------------

BSTR	IPAddr
------	--------

Description

Set IP Address or host name of a target device into PS-API.

Get IP Address or host name of a target device from PS-API.

Value

Character strings
(255bytes or less)

IP Address or host name
e.g. 192.168.0.10

Default value is "192.168.0.10".

Return value

None

Error

Note

When 0 is added at the top of segment like as 192.168.000.010, it is treated with octal number.
When port number is written after : (colon) like as 192.168.0.10:8080, error occurs.

PS-API does not support DDNS name resolver.

When both IPv6 address and IPv4 address are set as host name, connect with IPv6 address.

In the case of IPv6 address, you can set interface number by using "%", like as "2001::1%1"

In the case of IPv6 address and stream format are H265 / H264, the video may not be displayed.

Reference

5.2.2.4. HttpTimeout

Object	PSAPI Control
---------------	----------------------

Property	HttpTimeout
-----------------	--------------------

long	HttpTimeout
------	-------------

Description

Set HTTP communication timeout value for the HTTP server into PS-API.
Get HTTP communication timeout value for the HTTP server from PS-API.

Value

1 to 60
Second scale.

Http server timeout value.

Default value is 10 seconds.

Return value

None

Error

Note

When PS-API fails communication because of time-out or other reason, PS-API try to communicate again. Therefore the time-out error occurs after about 2 times interval of the time-out value set in HttpTimeout.

Depends on the version of installed Internet Explorer, the timeout error occurs before 2 times interval of the time-out value set in HttpTimeout.

In case of a NX Series, when operate the Search method, SearchEx method, VMDSearchEx method, and FtpGet method, the timeout value is fixed at 60 seconds.

Sequence

Sample program code

Reference

5.2.2.5. ProxyName

Object	PSAPI Control
---------------	----------------------

Property	ProxyName
-----------------	------------------

BSTR	ProxyName
------	-----------

Description

Set Proxy name or network address into PS-API.

Get Proxy name or network address from PS-API.

Value

Character strings
(255bytes or less)

Proxy name or Network address

Default value is "" (empty string).

Return value

None

Error

Note

When 0 is added at the top of segment like as 192.168.000.010, it is treated with octal number.
When port number is written after : (colon) like as 192.168.0.10:8080, error occurs.

PS-API does not support DDNS name resolver.

When both IPv6 address and IPv4 address are set as host name, connect with IPv6 address.

Interface number cannot be specified to ProxyName.

Sequence

Sample program code

Reference

5.2.2.6. ProxyPort

Object	PSAPI Control
---------------	----------------------

Property	ProxyPort
-----------------	------------------

long	ProxyPort
------	-----------

Description

Set Proxy port number into PS-API.
Get Proxy port number from PS-API.

Value

1 to 65535

Proxy port number

Default value is 80.

Return value

None

Error

Note

When the Proxy name isn't specified, an application should ignore the proxy port number setting.

Sequence

Sample program code

Reference

5.2.2.7. AccessType

Object	PSAPI Control
---------------	----------------------

Property	AccessType
-----------------	-------------------

long	AccessType
------	------------

Description

Set the type of an access method into PS-API to communicate with its server.

Get the type of an access method from PS-API to communicate with its server.

Value

0 : Depends on IE setting

1 : Direct access

2 : Proxy server access

It retrieves setting from Internet Explorer.

The web server must be configured to listen to the desired ports .

Via proxy server access.

Default value is 0.

Return value

None

Error

Note

When ProxyName isn't specified though AccessType is set to "2", it retrieves setting from Internet Explorer.

Sequence

Sample program code

Reference

5.2.2.8. UID

Object	PSAPI Control
Property	UID
long	UID

Description

Get UID that is retrieved from a target device.

For NX Series other than NX100, NX200, NX300, NX400 get the UID converted inside PS-API. Then please use GetUID or GetUIDEx according to the following cases.

- 5.2.2.8 UID : Get the UID used when executing a method defined in PS-API (for example, Connect() method).
- 5.2.2.9 UIDEx : Get the UID used when executing recorder CGI command directly from the application.

Value

	Get UID.
-1 : Not login	
0 : Logged	Login to Network Camera or Encoder
1 to 2,147,483,647 : Logged UID	Login to NWDR, HD300, HD600/700, NX Series.

Return value

None

Error

Note

When connecting to NX recorder using PS-API V13.10 or later,

If the return value is "-1" and you execute UIDEx and get a value of 1 or more, there is an inconsistency between UID property and UIDEx property, so execute the following.

- For instances connected to the recorder using Open(), execute Close().
- For the instance connected to the recorder using Connect(), execute Disconnect().

Please refer to the following URL for recorder CGI command.

5.2.2.16. SIDInfoUse

Object	PSAPI Control
---------------	----------------------

Property	SIDInfoUse
-----------------	-------------------

long	SIDInfoUse
------	------------

Description

Store the number of StreamID which is in use, which is gotten by calling GetSIDInfo method.

Value

0 : Not supported the getting StreamID information. Or StreamID isn't used. 1 to 64 : Number of StreamID which is in use.	This property is only for the value acquisition.
---------------------------------------------------------------------------------------------------------------------------------	--------------------------------------------------

Return value

None

Error

Note

Sample program code

Reference

5.2.2.17. SecureCommunicationMode

Object	PSAPI Control
---------------	----------------------

Property	SecureCommunicationMode
-----------------	--------------------------------

long	SecureCommunicationMode
------	-------------------------

Description

Set the HTTP Communication protocol(HTTP or HTTPS)to PS-API.

Get the HTTP Communication protocol(HTTP or HTTPS)to PS-API

Value

0 : HTTP	Set the HTTP protocol. Default value is 0.
1 : HTTPS	

Return value

None

Error

Note

- Set target device to HTTPS settings. (*Refer to each device manuals)
- A Self-signed Certificate or CA certificate is installed on the target device, only HTTP communication will be encrypted.
- Confirm the following settings in Control Panel - All Control Panel Items - Internet Options
 - Advanced "Use SSL2.0", "Use SSL3.0", "Use TLS1.0", "Use TLS1.1" is unchecked.
 - "TLS1.3" is only compatible with Windows 11.
- HTTPS is supported for the following communications.
 - (1) CGI Send and receive
 - (2) JPEG stream reception (including audio reception / transmission)
 - (3) H264/H265/MPEG4 stream reception in InternetMode (including audio reception / transmission)
- FTPS protocol is not supported.
- Use HTTPPort property for Port number of HTTPS.
Set HTTPPort property according to the HTTPS port number of the connecting device.
- Set this property before Open method.
- HTTPS communication availability for each device type is below.

DeviceType	HTTPS communication	Remarks
0 : HD300	×	
1 : NWDR	×	
2 : Camera	○	Below models are not deprecated NP502/SP300/SF330/SP100/SW350/SC384/SC385/SF340 /SF135/SW155/SW396/SW316/SC386/SP509/SW559 /SF539/SF549/SF438/SW458/SF448/SW598/SP307 /SF337/SW115/SW374/SW397/SF105A/SC384B
3 : Encoder	○	Below models are not deprecated GXE100
4 : HD600/700	×	
6 : NX Serise	○	

- When setting HTTPS, if there is something abnormal such as slow method response (over 10 seconds), please update the driver of Network adapter with Windows update.

Object	PSAPI Control
---------------	----------------------

Property	CertificateVerifyEnable
-----------------	--------------------------------

long	CertificateVerifyEnable
------	-------------------------

Description

Set whether to check the certificate of the connecting device during HTTPS communication to PS-API.

Get whether to check the certificate of the connecting device during HTTPS communication from PS-API.

Value

0 : don't check the certificate
1 : check the certificate

Set whether to check certificate of the connecting device.

Default value is 0.

Return value

None

Error

Note

For the settings the certificate of the connecting device and installation of the certificate to client PC, please refer to the manual of the target device(camera/recoder).

- Set this property before Open method.
- If this property is "1", check the following items
 - 1) Is the certificate registered in the "Trusted Root Certification Authorities" of client PC ?.
 - 2) Has the validity period of the certificate expired ?.
- HTTPS communication is possible even if this property has an value of "0".

Reference

5.3. Device Group

5.3.1. Method

5.3.1.1. GetDeviceStatus

Object	PSAPI Control
Method	GetDeviceStatus
long	GetDeviceStatus(long channel);

Description

Get the connection status of the device which is connected with the recording device.

In case of a NWDR, get the status of the device that connect to the specified channel.

In case of HD300, NV200, NV250, NV300, NX Series, a network camera, an encoder or HD600/700, get the status of device itself.

Argument

channel	1 : Network Camera 1 to 4 : Encoder NX100, NU101 1 to 8 : NU201 1 to 16 : ND200, HD300, HD600/700, NU300/301 1 to 24 : NV200, NV250 1 to 32 : ND300, NV300, NX200, NX300, NX310 1 to 64 : ND400, NX410 1 to 128 : NX400, NX510	Specify the video channel.
---------	--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------	----------------------------

Return value

0	There is no device on the specified channel
1	Does properly connect to the device.
2	Does not properly connect to the device.

Error

Get the error information by OnError event.

Note

In case of ND400, NV200, NV250, NV300, NX Series and HD600/700, there is another way to get the connection status. For details, refer to 5.3.1.11 GetInfoString()

Sequence

Sample program code

Reference

5.3.1.2. RecCtrl

Object	PSAPI Control
Method	RecCtrl
long	RecCtrl(long channel, long command, long mode,);

Description

Turn on and off the manual recording for the recorder with manual recording function.

Argument

channel	0 : All channels 1 to 16 : ND200, HD300 HD600/700 1 to 32 : ND300 1 to 64 : ND400	Specify the video channel. When it set to zero, it refers to all channels. If specifying the channel for HD300, ND200, ND300 or HD600/700, all channels recording will be started.
command	0 : Turn off recording 1 : Turn on recording	
mode	0 : Blocking Except 0 : Non-blocking	Blocking mode. When calling this method with non-blocking mode, OnRecStatusCB needs to have implementation, and OnRecStatusCBEable needs to be set to "1" to get a result.

Return value

0	Success
Except 0	Error code

Error

Error is defined by the return value.
Get the error information by OnError event.

Note

NV200, NV250, NV300 and ,NX Series doesn't support manual recording.

Sequence

[HTML] ..¥Sample Program¥PS-API¥HTML¥008_RecCtrl

Reference

5.3.1.3. GetRecCtrlStatus

Object PSAPI Control

Method GetRecCtrlStatus

```
long GetRecCtrlStatus(
    long channel
);
```

Description

Get recording status.

Argument

channel	0 : All channels 1 to 4 : NX100, NU101 1 to 8 : NU201 1 to 16 : ND200, HD300, HD600/700, NU300/301 1 to 24 : NV200, NV250 1 to 32 : ND300, NV300, NX200, NX300, NX310 1 to 64 : ND400, NX410 1 to 128 : NX400, NX510	Specify the video hannel. When it set to zero, it refers to all channels. When specifying "0 (All channels)", if only one channel is in recording status, the return value is "In recording".
---------	-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------	-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------

Return value

	[Specified a channel]
-1	Fail to get status.
0	OFF
1	Manual Recording
2	Event Recording
3	Schedule Recording
4	Emergency Recording
	[Specified All channels]
-1	Fail to get status.
0	OFF
1	In recording

Error

Get the error information by OnError event.

Note

In case of NWDR, NX Series, if a camera is not registered on the specified channel, GetRecCtrlStatus returns 0.

NV200, NV250, NV300 and NX Series doesn't support manual recording.

Sequence

Sample program code

Reference

5.3.1.4. Search

Object	PSAPI Control
Method	Search
long	Search(long channel, BSTR startDate, BSTR endDate, long type, long mode);

Description

Search the recording data on a target recording device.

The search results are set to the SearchResult property.

Time zone information is NOT included in search results.

Argument

channel	0 : All channels 1 to 4 : NX100, NU101 1 to 8 : NU201 1 to 16 : ND200, HD300, HD600/700, NU300/301 1 to 24 : NV200, NV250 1 to 32 : ND300, NV300, NX200, NX300, NX310 1 to 64 : ND400, NX410 1 to 128 : NX400, NX510	Specify the video channel. When it set to zero, it refers to all channels. When it set to zero and SearchMultiChMask property is set the value, Search method works with the channels that is specified by SearchMultiChMask property.
startDate	yyyy/mm/dd hh:mm:ss	Search the recording data that started recording after the specified time.
endDate	yyyy/mm/dd hh:mm:ss	Search the recording data that started recording before the specified time.

Argument

eventType

Bit 0 to Bit 14 :

Specify the recording event kind by 32 digit binary.

Bit 0 : Emergency (EMR)

Bit 1 : Manual (MAN)

Bit 2 : Schedule (SCH)

Bit 3 : Terminal (TRM)

Bit 4 : Command alarm (COM)

Bit 5 : Camera site alarm (CAM/SITE)

* In case of HD300, Bit5 is VMD.

Bit 6 : SD Backup (SD)

Bit 7 : Video Loss (LOSS)

Bit 8 : VMD alarm (VMD)

Bit 9 : Motion alarm (CMTN)

Bit 10 : Loitering alarm (CSTY)

Bit 11 : Removal alarm (CRMV)

Bit 12 : Scene change alarm (CSCD)

Bit 13 : Terminal alarm (CTRM)

Bit 14 : Direction alarm (CDRT)

Bit 15 to Bit 32 : Reserved

Bit	HD300	ND200 ND300 ND400	NV200 NV250 NV300	HD600 HD700	NX series
0	EMR	EMR	-	EMR	EMR
1	MAN	MAN	-	MAN	-
2	SCH	SCH	SCH	SCH	SCH
3	TRM	TRM	TRM	TRM	TRM
4	COM	COM	COM	COM	COM
5	(VMD)	CAM	CAM	SITE	CAM
6	-	SD	-	-	SD

8	VMD	-	-	VMD	-
9	-	-	-	CMTN	-
10	-	-	-	CSTY	-
11	-	-	-	CRMV	-
12	-	-	-	CSCD	-
13	-	-	-	CTRM	-
14	-	-	-	CDRT	-

Bit map format

MSB	-	-	-	-	-	-	LSB
0	0	0	...	0	0	0	0
Bit	Bit	Bit	...	Bit	Bit	Bit	Bit
31	30	29		3	2	1	0

e.g. Emergency + Terminal

[Binary] 0001001 ---> type = 9

Except for NX Series, SD backup search and the other type search cannot be used together at the same time.

If specifying "1" to the other bits, SD backup are ignored.

In case of NWDR and NX Series, Bit7 is ignored if it is set to "1".

In case of HD300, Bit6 is ignored if it is set to "1".

In case of HD300, Bit5 or Bit8 is VMD alarm event search.

Argument

mode	0 : Blocking Except 0 : Non-blocking	Blocking mode When calling this method with non-blocking mode, OnSearchCB needs to have implementation, and OnSearchCBEnable needs to be set to "1" to get a result.
------	-----------------------------------------	-------------------------------------------------------------------------------------------------------------------------------------------------------------------------

Return value

0	Success
Except 0	Error code

Error

Error is defined by the return value.
Get the error information by OnError event.

Note

In case that Search method is called during the network playback or the local file playback, please stop the network playback and the local file playback before calling Search method.

The maximum number of search result count is 3000.

When TRM/CMD/CAM/SITE/VMD/LOSS/CMTN/CSTY/CRMV/CSCD/CTRM/CDRT are specified in search condition, all event pre recording data that exist between the specified time are included in the search result list.

For NX100, NX200, NX300 and NX400, when NXStreamNumber property is set to '2', the sub-stream recording is searched.

The sub-stream recording supports H.265, H.264.

When the "HDD Standby Control" setting is "ON" in the NX Series, please specify the duration between startTimeDate and endTimeDate within 120 minutes.

Sequence

Sample program code

Reference

5.3.1.5. SearchEx

Object	PSAPI Control
Method	SearchEx
long	SearchEx(long channel, BSTR startTimeDate, BSTR endTimeDate, long type, long mode);

Description

Search the recording data on a target recording device.
The search results are set to the SearchResult property.
Time zone information is included in search results.

Argument

channel	0 : All channels 1 to 4 : NX100, NU101 1 to 8 : NU201 1 to 16 : ND200, HD300, HD600/700, NU300/301 1 to 24 : NV200, NV250 1 to 32 : ND300, NV300, NX200, NX300, NX310 1 to 64 : ND400, NX410 1 to 128 : NX400, NX510	Specify the video channel. When it set to zero, it refers to all channels. When it set to zero and SearchMultiChMask property is set the value, Search method works with the channels that is specified by SearchMultiChMask property.
startTimeDate	yyyy/mm/dd hh:mm:ss	Search the recording data that started recording after the specified time.
endTimeDate	yyyy/mm/dd hh:mm:ss	Search the recording data that started recording before the specified time.

Argument

eventType

Bit 0 to Bit 14 :

Specify the recording event kind by 32 digit binary.

Bit 0 : Emergency (EMR)

Return value

timezone Return the time zone and summer time information..

timeZone,isDst(CRLF)
inTime1,outTime1(CRLF)
inTime2,outTime2(CRLF)
:
inTime9,outTime9(CRLF)

timeZone	Time zone (plus or minus, minutes scale) e.g. In case of GMT+9:00, m_Itimezone=540
isDst	Current DST mode 0 : Normal, 1 : Summer time(DST) 2 : Auto setting
inTime*	*th DST in time (yyyy/mm/dd hh:mm:ss)
outTime*	*th DST out time (yyyy/mm/dd hh:mm:ss)

Error

Get the error information by OnError event.

Note

Sequence

In case of HD300, the time zone information (timeZone) cannot be gotten. timeZone is set to 0.
In case of camera or encoder, the DST range list (stDstList) cannot be gotten.

Sample program code

Reference

5.3.1.10. GetDevCurrentInfo

Object	PSAPI Control
---------------	----------------------

Method	GetDevCurrentInfo
---------------	--------------------------

long	GetDevCurrentInfo();
------	----------------------

Description

Get the device information and hold it.

When refer the gotten information, please use GetInfoString method.

Argument

None

Return value

0	Success
---	---------

Except 0	Error code
----------	------------

Error

Error is defined by the return value.

Get the error information by OnError event.

Note

Depends on network load or environment, it takes about 10 seconds to finish this method.

Sample program code

Reference

5.3.1.11. GetInfoString

Object	PSAPI Control
---------------	----------------------

Method	GetInfoString
---------------	----------------------

BSTR	GetInfoString(BSTR key);
------	----------------------------------

Description

Get a value from the kept information that was gotten by GetDevCurrentInfo method.

Argument

key	Character strings	Specify the key name.
-----	-------------------	-----------------------

Return value

Character strings	The information of device.
-------------------	----------------------------

Error

Get the error information by OnError event.

Note

If there is no pair to specified key, this method returns an error and the value is set to "" (empty string).

In case of ND400, NV200, NV250, NV300, NX Series and HD600/700, it is possible to get the connection status of the device , using the key "API_CAM_CONNECT_XXCH" .

Key

"API_CAM_CONNECT_XXCH" XX is channel number

value

[ND400, NV200, NV250, NV300, NX Series]

0: camera is not registration

1: camera is connected

2: camera is not connected

[HD600/700]

1: camera is connected

2: camera is not connected

Sequence

Sample program code

Reference

5.3.1.12. SetCameraTime

Object PSAPI Control

Method SetCameraTime

long SetCameraTime (
BSTR timeDate,
long isDst
);

Description

Set specified time to a target device.

Argument

timeDate	yyyy/mm/dd hh:mm:ss	Specify a time and date character string to change the setting of a target device.
isDst	0:Normal 1:Summer time	Summer time information of the time that is specified to timeDate.

Return value

0	Success
Except 0	Error code

Error

Error is defined by the return value.
Get the error information by OnError event.

Note

Time display format is set to "24h" except for the following models
NP240 , NW484 , NS202 , NS950 , NP304 , NP502 , SP300 , SP100 , SC385 , SF340 , SW350 ,
SW559 , SW155 , SW316 , SC386 , SF539 , SF438 , SW458 , SP307 , SF337 , SW598 , SW158

5.3.2.2. SearchMultiChMask

Object **PSAPI Control**

Property **SearchMultiChMask**

BSTR SearchMultiChMask

Description

Set the channel information into PS-API when searching (Search/SearchEx) at multiple channel at the same time..

Get the channel information from PS-API.

Value

Character strings
(128 bytes or less)

Specify "1 : ON", "0 : OFF" for each channels.
Default value is "" (empty string).

When the channel argument of Search/SearchEx method is set to "0: all channels", this property is valid.
the channel argument of Search/SearchEx method is set to "0: all channels" and this property is set to NULL, all channels are the target of search.

When specified 128 bytes character strings, the top (left side) of character is pair to channel 1, and the end (right side) of character is pair to channel 128.

e.g. In case of searching channel 1, 3 and 6.
"10100100....."

Return value

None

Error

Note

The specified value is shorter than the channel number that target device has, the lack value changes as "0 : OFF".

The specified value is over the channel number that target device has, the over value is ignored.

All specified values that are pair to the target device's channel numbers are set to "0 : OFF", Search/SearchEx method returns error.

Object	PSAPI Control
Method	GetFrameTime
BSTR	GetFrameTime()

Description

Get the frame time and date of the current displaying image, when getting the live image of camera/recorder or the recording image of recorder.

Argument

None

Return value

FrameTime	Return the time information (time and date, time zone, summer time). e.g. Dec. 6 th , 2008 00:30:00 pm in Japan 2008/12/06 12:30:00:000 +09:00 e.g. Aug. 6 th , 2008 00:30:00 pm in US Eastern and summer time 2008/08/06 12:30:00:000 -05:00 DST
-----------	---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------

Error

Get the error information by OnError event.

Note

According to the target device, "time and date", "time zone" and "summer time" cannot be got. Refer to the following table.

-PlayLive

	time and date	time zone	summer time
HD300	local time *4	00:00(Fixed)	summer time
NWDR	local time *4	time zone *2	summer time
Camera *1	local time	time zone *3	summer time
Encoder	local time	time zone *3	summer time
HD600/700	local time *4	time zone of HD600/700	summer time
NX Series	local time *4	time zone *2	summer time

*1 NP1000 doesn't support the frame time and date of the current displaying image. Frame time is set to "".

*2 ND200, NV200, NV250, NV300, NX Seies : time zone of recorder
ND300, ND400 : time zone of camera

*3 In case of NTP setting of camera is manual, time zone is set to "00:00".
In case of NTP setting of camera is the sync mode with NTP server, time zone is the network camera's time zone.

*4 In case of PlayLive with HD300, NWDR, HD600/700 or , NX Series, milli-second is set to "000 (Fixed)".

-Play

	time and date	time zone	summer time
HD300	local time *5	00:00(Fixed)	summer time
NWDR	local time	time zone *3	summer time
HD600/700	local time	time zone of HD600/700	summer time
NX Series	local time	time zone *3	summer time

*3 ND200, NV200, NV250, NV300, NX Series : time zone of recorder
ND300, ND400 : time zone of camera

*5 In case of Play with HD300, milli-second is set to "000 (Fixed)".

-PlayFile

	time and date	time zone	summer time
HD300	local time *5	00:00(Fixed)	summer time
NWDR	local time *5	time zone *3	summer time
HD600/700	local time	time zone of HD600/700	summer time
NX Series	local time *5	time zone *3	summer time

*3 ND200, NV200, NV250, NV300, NX Series : time zone of recorder
ND300, ND400 : time zone of camera

*5 In case of PlayFile with n3r(JPEG) or h3r file, milli-second is set to "000 (Fixed)".

5.4.1.2. PlayLive

Object	PSAPI Control		
Method	PlayLive		
long	PlayLive(long channel, long mode,);		
Description			
Start live video play.			
Argument			
channel	1 : Network Camera, GXE100 1 to 3 : S8573, X86530-Z2 1 to 4 : Encoder, X8570, X8571 S8574, X86531-Z2 NX100, NU101 1 to 8 : NU201 1 to 16 : ND200, HD300, HD600/700, NU300/301 1 to 24 : NV200, NV250 1 to 32 : ND300, NV300, NX200, NX300, NX310 1 to 64 : ND400, NX410 1 to 128 : NX400, NX510	Specify the video channel.	
mode	0 : blocking Except 0 : Non-blocking	Blocking mode. When calling this method with non-blocking mode, OnPlayStatusCB needs to have implementation, and OnPlayStatusCBEnable needs to be set to “1” to get a result.	
Return value			
0	Success		
Except 0	Error code		
Error			
Error is defined by the return value. Get the error information by OnError event.			

Note

When connecting to NWDR, NX Series and displaying MPEG-4/H.264/H.265 Live, please specify the different port number for receiving the MPEG-4/H.264/H.265 video stream to each channel. About the setting of MPEG-4/H.264/H.265 port number, please refer to “5.4.2.1 MPEG4Port” or “5.4.2.2 H264Port”.

When connecting to NWDR, NX Series and displaying MPEG-4/H.264/H.265 Live, the response of starting Live may be late if the refresh rate is long.

In case of HD600/700, when playing Live with H264Resolution set to 320, OSD is not displayed.

When using 360-degree Network Camera, please refer to “4.7 About 360-degree Network Camera”.

In case H.264/H.265 video is not display, please try setting as bellow.

(1)Set DecResolutionMode property to 3.

(2)Set H264Resolution property smaller than video stream resolution it has being receiving. (*However, the resolution will be low.)

If a network fault occurs during Internet mode live, even if the network fault recovery, you may not hear audio. In case make audio hear, please execute PlayLive again.

Reference

5.4.1.3. Play

Object	PSAPI Control		
Method	Play		
long	Play(long channel, BSTR timeDate, long mode);		
Description			
Start recorded video play.			
Argument			
channel	1 to 4 : NX100, NU101 1 to 8 : NU201 1 to 16 : ND200, HD300, HD600/700, NU300/301 1 to 24 : NV200, NV250 1 to 32 : ND300, NV300, NX200, NX300, NX310 1 to 64 : ND400, NX410 1 to 128 : NX400, NX510	Specify the video channel.	
timeDate	yyyy mm dd hh mm ss Empty string	Specify a time and date character string for the recorded video playback. If “NULL” or “” (empty string). is specified, PS-API skip to the latest recording time and start playing.	
mode	0 : blocking Except 0 : Non-blocking	Blocking mode. When calling this method with non-blocking mode, OnPlayStatusCB needs to have implementation, and OnPlayStatusCBEnable needs to be set to “1” to get a result.	
Return value			
0	Success		
Except 0	Error code		
Error			
Error is defined by the return value. Get the error information by OnError event.			

Note

In case of HD300, it is necessary that the total recording frame rate of all playback stream is 15 ips or less.

If the total is over 15 ips, the playback isn't smooth.

If specify the empty string to timeDate, playback starts from the following point.

Time between the starting point and the record terminal depends on the device setup. The default value is 30 second(except for NX Series), 15 second(in case of NX Series).

However if you repeatedly execute Play method on this setting in the NX Series, audio might not be heard.

In the case a NX Series by designating date & time, playback may start from a point several seconds before or after the designated date & time.

In case H.264/H.265 video is not display, please try setting as bellow.

(1)Set DecResolutionMode property to 3.

(2)Set H264Resolution property smaller than video stream resolution it has being receiving.(However, the resolution will be low.)

For NX100, NX200, NX300 and NX400, when SIDMode property is set to '0' and NXStreamNumber property is set to '2', the sub-stream recording is played.

The sub-stream recording supports H.265, H.264.

To execute Play mehod right after HttpMP4Download or HttpDownload method, execute PlayLive method once and then execute Play method again.

If there is a difference between "RcvAudioDec property value" and "Recorder's audio format setting or recording data format", multiple OnError may be notified when SetErrListener is enabled.

[NX Series]

	Step1	Step2	Step3	Step4	Step5	Step6	Step7
NX Series	x 1	x 2	x 4	x 8	x 16	x 32	x48

In case of multi screen playback, please refer to the following notes.

When using “Next frame/Previous frame” with the records that are recorded with different rate, the playback cannot synchronize. Because the duration between frames of each channel is different.

When using “Next record/Previous record” with the records that are separated at different time, the playback cannot synchronize. Because the starting point of playback are different.

When the duration of the record which is recorded with MPEG-4/H.264/H.265 is shorter than the refresh interval (I-frame interval), next record and previous record in keeping direction and speed doesn't work.

In this case, please do pause before next record and previous record.

In the case a NX Series by designating frame, playback may start from a point several seconds before or after the designated frame.

Reference

5.4.1.6. PlayControlByTime

Object **PSAPI Control**

Method **PlayControlByTime**

```
long      PlayControlByTime(  
                                BSTR    timeDate,  
                                long    isDst,  
                                long    mode  
                            );
```

Description

Jump to the specified date and time,
Playback direction and speed is hold..

Argument

timeDate	yyyy/mm/dd hh:mm:ss	Specify a time and date character string for the recorded video playback. If "NULL" or "" (empty string). is specified, error occurs.
isDst	0:Normal 1:Summer time	Summer time information of the time that is specified to timeDate.
mode	0 : blocking Except 0 : Non-blocking	Blocking mode.

Return value

0	Success
Except 0	Error code

Error

Error is defined by the return value.
Get the error information by OnError event.

Note

HD300 doesn't support PlayControlByTime method.

In case of network playback, jump function is valid during displaying black image. When the network playback video is displayed, this method returns error.

In case of network playback, the specifiable time and date is the time between the current playback point and the beginning point of the next record.

In case of file playback, it can jump to any optional time by using this method.

Method	GetPicturePosition
---------------	---------------------------

long	GetPicturePosition();
------	------------------------

Description

Get the position of the displayed picture except black panels.

The gotten position values are set to PicturePosTopX/ PicturePosTopY/ PicturePosBottomX/ PicturePosBottomY properties.

Argument

None

Return value

0	Success
---	---------

Except 0	Error code
----------	------------

Error

Error is defined by the return value.
Get the error information by OnError event.

Note

The following points can be gotten as PicturePosTopX/ PicturePosTopY/ PicturePosBottomX/ PicturePosBottomY properties

Figure 5-1 Black Panel on the Left and Right

Figure 5-2 Black Panel on the Top and Bottom

Sequence**Sample program code****Reference**

5.4.1.11. GetImageResolution

Object	PSAPI Control
---------------	----------------------

Method	GetImageResolution
---------------	---------------------------

long	GetImageResolution();
------	------------------------

Description

Get the displayed image resolution of live video and recorded video image.
The gotten resolution values are set to ImageResolutionWidth/ImageResolutionHeight properties.

Argument

None

Return value

0	Success
---	---------

Except 0	Error code
----------	------------

Error

Error is defined by the return value.
Get the error information by OnError event.

Note

The gotten resolution depends on a target device and stream format.
Please refer to the following table.

	PlayLive	Play	PlayFile	DecodeImage
HD300	imageWidth: 640 imageHeight: 480	imageWidth: 640 imageHeight: 480	imageWidth: 640 imageHeight: 480	
NWDR	JPEG : Resolution of video stream MPEG-4 : Resolution of video stream H.264 : *1	JPEG : Resolution of video stream MPEG-4 : Resolution of video stream H.264 : *1	JPEG : Resolution of video stream MPEG-4 : Resolution of video stream H.264 : *1	Not support
Network camera	JPEG : Resolution of video stream MPEG-4 : Resolution of video stream H.264 : *1 H.265 : *1			Not support
Encoder	JPEG : Resolution of video stream MPEG-4 : Resolution of video stream H.264 : *1			Not support
HD600/700	H.264 : *1	H.264 : *1	H.264 : *1	Not support
NX Series	JPEG : Resolution of video stream H.264 : *1 H.265 : *1	JPEG : Resolution of video stream H.264 : *1 H.265 : *1	JPEG : Resolution of video stream H.264 : *1 H.265 : *1	Not support

*1 : Get the resolution of a displayed image.

However, when the upper limit of resolution (DecResolutionMode=3) is set,
get the value set in the H264Resolution property.

When a black image is displayed, a resolution value is gotten depends on stream format.

	imageWidth	imageHeight
JPEG	10	10
MPEG-4	352	288
H.264	32	32
H.265	64	64

           long   maskColor,
           long   transmissivity
           );
```

Description

Display text strings with transmissivity on the video image.

Argument

id	1 to 4	ID for management
command	0 : Non display 1 : Display	
filename	Character strings (Half size character : 256 bytes or less)	Specify a file name and its full path for displaying on video image.
xPosition	0 and over	X position of displayed bitmap (top right corner).
yPosition	0 and over	Y position of displayed bitmap (top right corner)..
maskColor	-1 : No mask 0 to 16777215 : Mask	Mask color (undisplayed color) The sum of R (Red), G (Green) ad B (Blue) R, G and B are specified with the following value. <div style="margin-left: 40px;"> R : 0 - 255 (0x000000 – 0x0000FF) G : 256 - 65280 (0x000100 – 0x00FF00) B : 65536 - 16711680 (0x010000 – 0xFF0000) </div>
transmissivity	0 to 255	No mask is specified with “-1 (0xFFFFFFFF)”. Transmissivity of overlay bitmap image. 0 (0x00) : transparent 127 (0x7F) : translucent 255 (0xFF) : opaque

Return value

0	Success
Except 0	Error code

Error

Error is defined by the return value.
Get the error information by OnError event.

Note

Please specify xPosition and yPosition based on the PS-API control size. Cannot display the text out of PS-API control.
The text is not displayed on the image gotten by OnImage.

Sequence

Sample program code

Reference

5.4.1.23. DigitalZoomMove

Object **PSAPI Control**

Method **DigitalZoomMove**

long DigitalZoomMove(
 long xPosition,
 long yPosition,
);

Description

Move the displayed area during working a digital zoom.

Argument

xPosition	Integer	Specify distance of x direction.
yPosition	Integer	Specify distance of y direction.

Return value

0	Success
Except 0	Error code

Error

Error is defined by the return value.
Get the error information by OnError event.

Note

Please specify the direction of x direction and y direction by using pixel scale value of displayed image with digital zoom.

If specified position is out of original image, the displayed area moves to an edge. When reaches to the edge, error occurs.

When displaying the video image with black panel and executing this method, the position and width of black panel is kept.

Sequence

Sample program code

Reference

5.4.1.24. GetDigitalZoomPosition

Object **PSAPI Control**

Method **GetDigitalZoomPosition**

long GetDigitalZoomPosition();

Description

Get the current position of the displayed area in the original image with digital zoom.
Coordinate origin is the top-left corner position of original image, and the gotten value by this method is the top-left corner position of the displayed area.
The gotten position values are set to DigitalZoomPositionX/DigitalZoomPositionY properties.

Argument

None

Return value

0 Success

Except 0 Error code

Error

Error is defined by the return value.
Get the error information by OnError event.

5.4.1.33. MultiSyncPause

Object	PSAPI Control
---------------	----------------------

Method	MultiSyncPause
---------------	-----------------------

long	MultiSyncPause();
------	-------------------

Description

When using PlayControl with multi screen, pause to synchronize with other screen.
When using the device which supports StreamID mode and setting On to SID mode, this method doesn't need to be executed.

Argument

None

Return value

0	Success
---	---------

Except 0	Error code
----------	------------

Error

Error is defined by the return value.
Get the error information by OnError event.

Note

When using the device which supports StreamID mode and setting On to SID mode, this method doesn't need to be executed.

It is necessary to call MultiSyncTime method after executing this method.

If using multiple screen playback with shared UID without executing this method, PS-API works with unexpected behavior.

Sequence

Sample program code

Reference

5.4.1.34. MultiSyncTime

Object **PSAPI Control**

Method **MultiSyncTime**

```
long      MultiSyncTime(  
                                BSTR    syncTime,  
                                long    isDst  
                                );
```

Description

When using PlayControl with multi screen, set the sync time to synchronize with other screen. When using the device which supports StreamID mode and setting On to SID mode, this method doesn't need to be executed.

Argument

syncTime	yyyy/mm/dd hh:mm:ss	Specify a time and date character string for the base to synchronize. The strings must be terminated with null character. If "NULL" or "" (empty string). is specified, error occurs.
isDst	0:Normal 1:Summer time	Summer time information of the time that is specified to syncTime.

Return value

0	Success
Except 0	Error code

Error

Error is defined by the return value.
Get the error information by OnError event.

Note

When using the device which supports StreamID mode and setting On to SID mode, this method doesn't need to be executed.

It is necessary to call MultiSyncPause method before executing this method.

If using multiple screen playback with shared UID without executing this method, PS-API works with unexpected behavior.

Reference

5.4.1.35. CamSnapShot

Object	PSAPI Control
--------	---------------

Method	CamSnapShot
--------	-------------

long	CamSnapShot (long channel, long imageMode);
------	--------------------------------------------------------

Description

Get the snapshot image from NW camera or Encoder, and display it.

Argument

channel	1 : NW camera, GXE100 1 to 3 : S8573, X86530-Z2 1 to 4 : Encoder X8570, X8571 S8574, X86531-Z2	Specify the video channel It doesn't support network disk recorder and digital disk recorder
imageMode	0 : Fisheye image 1 : 320x240 or 320x180 2 : 640x480 or 640x360	Specify the mode of snapshot. The aspect ratio of the gotten image depends on the NW camera and encoder configuration.

Return value

0	Success
Except 0	Error code

Error

Error is defined by the return value.
Get the error information by OnError event.

Note

The NW camera that can get fisheye images with “imageMode=0” is as follows.

*SW458, SF448, SF438

When using mode “0” with NW camera or encoder other than above, the aspect ratio of the gotten image is the aspect ratio that is set for the live video transmission.

Sample program code

Reference

5.4.1.36. SetCroppingRect

Object **PSAPI Control**

Method **SetCroppingRect**

```
long     SetCroppingRect (
                long   id,
                long   ltX,
                long   ltY,
                long   rbX,
                long   rbY
                );
```

Description

Set the Cropping area from the panorama area.

If enable the "5.4.2.43 CroppingEnabled", this setting will be reflected in the video.

Argument

id	1-5:Cropping frame	Cropping area id
ltX	integer	Specify the top-left X position of Cropping area.
ltY	integer	Specify the top-left Y position of Cropping area.
rbX	integer	Specify the bottom-right X position of Cropping area.
rbY	integer	Specify the bottom-right Y position of Cropping area.
* Negative value can be set on XY position, but there is no images in the negative value area, so the area will be back ground color.		

Return value

0	Success
Except 0	Error code

Error

Error is defined by the return value.
Get the error information by OnError event.

Note

The coordinates of the Cropping area should be specified the position in the panorama area which is set by "5.4.1.38 SetCroppingDrawRect" method, and the coordinate is based on the display area which is OCX control size.

When the coordinates is specified out of "id=0 area(panorama)" range, it will be displayed the back ground color on the screen.

The bottom-right position value should be bigger than top-left position value.

If need to display the frame line, please set the frame position by "5.4.1.43 SetCroppingMarker".

        long    channel,
        long    command,
        char*   startTimeDate,
        char*   endTimeDate,
        long    audiomode,
        char*   fileName
    );
```

Description

Download MP4 file from NX Series via HTTP.

Argument

channel	1 to 4 : NX100,NU101 1 to 8 : NU201 1 to 16 : NU300/301 1 to 32 : NX200, NX300, NX310 1 to 64 : NX410 1 to 128 : NX400, NX510	Specify the video channel.
command	0 : Stop MP4 file download 1 : Start MP4 file download	Specify Stop MP4 file download / Start MP4 file download.
startTimeDate	yyyy/mm/dd hh:mm:ss	Download the recording data that started recording after the specified NX Series local time. The strings must be terminated with null character.
endTimeDate	yyyy/mm/dd hh:mm:ss	Download the recording data that start recording before the specified NX Series local time. Please specify the duration between startTimeDate and endTimeDate within 60 minutes. The strings must be terminated with null character.
audioMode	0 : video data only 1: video data and audio data	

Argument

fileName	Character strings (221 byte or less)	Specify a complete file path, and file name without extension for storing the downloaded video. The start date and time of the recorded data acquired from the NX Series is also added to the file name. An extension(mp4) is added automatically. The strings must be terminated with null character.
----------	-----------------------------------------	-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------

Return value

0	Success
Except 0	Error code

Error

Error is defined by the return value.
Get the error information by OnError event.

Note

NWDR other than NX Series does not have MP4 download function.
Depending on the NX Series specification, it may be divided into multiple MP4 files.
(Example :If the video format, resolution or recording type is different, the file will be split)
Depending on the NX Series specification, JPEG will be excluded from download.
While downloading, a ".tmp" file is created in the specified folder, but until downloading is completed do not manually delete ".tmp" file.

5.4.2.17. FastPlayMode

Object **PSAPI Control**

Property **FastPlayMode**

long FastPlayMode

Description

Set the viewing mode of fast forward/rewind rate in network playback into PS-API.

Get the viewing mode of fast forward/rewind rate in network playback from PS-API.

Value

0 : Normal mode
1 : High rate mode

Mode of fast forward/rewind rate in
network playback

Default value is 0.

Return value

None

Error

Note

ND200 and ND300 are not supported this property.

When using this property with ND400, NV200, NV250, NV300, NX Series and HD600/700, please confirm the device's firmware version and it is necessary to use the firmware which support this function.

If the device's firmware doesn't support this function. PS-API works as normal mode.

This property is valid with network playback.

In rewind, regardless of playback speed, only 1 pictures are displayed.

The description of the playback speed is as follows.

In the case of FastPlayMode = 0 (Normal mode)

[NWDR]

	Step1	Step2	Step3	Step4	Step5	Step6	Step7
ND400	x 1	x 4	x 8	x 16	x 32	x 48	x96
NV200							
NV250							
NV300							

Note

[HD600/700]

	Step1	Step2	Step3	Step4	Step5	Step6	Step7
HD600/700	x 1	x 2	x 5	x 10	x 20	x 50	x100

[NX Series]

	Step1	Step2	Step3	Step4	Step5	Step6	Step7
NX Series	x 1	x 4	x 8	x 16	x 32	x 48	x96

In the case of FastPlayMode = 1 (High rate mode)

[NWDR]

	Step1	Step2	Step3	Step4	Step5	Step6	Step7
ND400	x 1	x 2	x 4	x 8	x 16	x 32	x48
NV200							
NV250							
NV300							

[HD600/700]

	Step1	Step2	Step3	Step4	Step5	Step6	Step7
HD600/700	x 1	x 2	x 4	x 8	x 16	x 32	x48

[NX Series]

	Step1	Step2	Step3	Step4	Step5	Step6	Step7
NX Series	x 1	x 2	x 4	x 8	x 16	x 32	x48

When using high rate mode, the frames of all I-picture/P-picture/B-picture are displayed in the case of up to Step3. Therefore a delay may occur for drawing when doing fast forward/rewind a video image which is recorded with high resolution and high frame rate.

e.g.) When doing "Step3" fast forward the video image which is recorded with 4VGA resolution and 30 ips frame rate

Sequence

Sample program code

Reference

5.4.2.18. TransFrameRate

Object	PSAPI Control
---------------	----------------------

Property	TransFrameRate
-----------------	-----------------------

long	TransFrameRate
------	----------------

Description

Set frame rate for video stream into PS-API.

Get frame rate for video stream from PS-API.

TransFrameRate is valid when using JPEG PlayLive with camera and encoder, or using PlayLive/Play with HD300.

Value

0 : Use device setting
1 to 300 : Frame rate

Specify the optional frame rate for video stream.

e.g.) 1 : 0.1 [ips]

100 : 10 [ips]

300 : 30 [ips]

Default value is 0.

In case of camera or encoder, the following frame rate are supported.

1, 2, 3, 5, 10, 20, 30, 50, 60, 100, 150, 300

* If specifying "3", PS-API works as 0.33[ips].

Return value

None

Error

Note

In case of camera or encoder, if the specified frame rate is not supported on a target device, an error occurs from PS-API when calling PlayLive.

In case of HD300, the frame rate of received video stream may be less than the specified frame rate.

In case of Play with HD300, if specifying frame rate is less than the recording frame rate, playback speed becomes slow.

------	-------------------

Description

Set into PS-API whether to limit the decode size of H.264, H.265 or not.

Value

0 : Decode without the upper limit of resolution

3 : Decode by the upper limit of resolution

Default value is 0.

Return value

None

Error

Note

ND200 and ND300 don't support "3:Enable the setting of maximum decode resolution".

This function is only available for H.264/H.265. If set "3:Enable the setting of maximum decode resolution", video image is decoded by the resolution which is set to H264Resolution as maximum.
e.g.) When DecResoluitonMode is 3 and H264Resolution is 640(VGA), the resolution of the decoded video image is up to VGA, even if the original video image resolution which is transmitted by camera is 1280(4VGA).

When you enable this function, the snapshot image size is upto the size which is set to H264Resolution.

e.g.)

Decoded video image size		Original H.264/H.265 resolution (Camera transmission setting)		
		320	640	1280
Maximum decode size setting (H264Resolution with DecResolutionMode = 3)	320	320	320	320
	640	320	640	640
	1280	320	640	1280

5.4.2.53. TransIntervalMode

Object **PSAPI Control**

Property **TransIntervalMode**

long TransIntervalMode

Description

Set the mode to correct the transmission interval of decoded pictures.

Value

0: OFF

Default value is 0.

1: ON

Return value

None

Error

Note

- JPEG/HD300 are not supported
- Not supported when the frame rate is less than 1fps
Even if the rate temporarily drops less 1fps due to a network error or other error,
the function stops.
Execute the PlayLive/Play/PlayFile method to resume the function.

When TransIntervalMode = 1, it has the effect of suppressing the video unsmooth movement.
The effect can be adjusted by the setting value of DecBufferNum property.
Set DecBufferNum property according to the operating environment.

supplementary note:

- (1) This function may not be effective.
e.g.) video unsmooth movement due to network delay
- (2) It takes a little more time from operation until the first image appears.
But does not mean that the video delay spread.
- (3) It would be increased memory usage, because it suppress the video unsmooth movement
by accumulateing image.

Description

Send Pan, Tilt, Zoom, Focus, Iris command to the specified camera.

In case of sending CameraControl method repeatedly, the interval between commands needs to be set to 80 or more [milliseconds].

*** About more detailed information, refer to Note.**

Argument

channel	1 : Network Camera, GXE100 1 to 3 : S8573, X86530-Z2 1 to 4 : Encoder X8570, X8571, S8574, X86531-Z2 NX100, NU101 1 to 8 : NU201 1 to 16 : ND200, HD300, HD600/700, NU300/301 1 to 24 : NV200, NV250 1 to 32 : ND300, NV300, NX200, NX300, NX310 1 to 64 : ND400, NX410 1 to 128 : NX400, NX510	Specify the video channel. X8570, X8571, S8573 S8574, X86530-Z2, X86531-Z2 can use Iris function for specified channel. However, when Image capture mode on S8573 S8574, X86530-Z2, X86531-Z2 is “Quad” or “Panorama”, Iris function works as channel 1 regardless of the specified channel value.
pan	0 : Stop -256(Left) to 256(Right) : Pan speed	* The direction of Pan/Tilt is for ceiling setting mode. (The camera is to be installed with the dome side down.)
tilt	0 : Stop -256(Upper) to 256(Lower) : Tilt speed	
zoom	0 : Stop -4 (Wide) to 4 (Tele) : Zoom speed	

Argument

focus	0 : Stop -4 (Near) to 4 (Far) : Focus speed
iris	0 : Iris Stop 1 : Iris Open 2 : Iris Close 3 : Iris return to the default position

Return value

0	Success
Except 0	Error code

Error

Error is defined by the return value.
Get the error information by OnError event.

Note

Depending on the camera model, a PoE + (compliant with IEEE802.3at)/ PoE ++ (compliant with IEEE802.3bt) compatible hub or power supply device may be required. Please refer to the device manual.

In case of the NWDR, HD600/700 and NX Series, the network camera or the encoder, Focus cannot be used with Pan/Tilt/Zoom at the same time. If Pan/Tilt/Zoom and Focus is specified, Pan/Tilt/Zoom has priority, Focus is invalid.

When controlling the analog camera via a HD300, 2 or more operations (Pan and Tilt/ Zoom/ Focus/ Iris) cannot be used at the same time.

In case of the HD300, if the interval between the commands is short, the analog camera doesn't work.

When controlling the analog camera via a HD300, HD600/700 or Encoder, error will not occur though the target analog camera doesn't support the operations (Pan and Tilt/ Zoom/ Focus/ Iris).

When using the camera with electronic zoom and setting the electronic zoom function to "ON", Zoom control doesn't work after reaching the edge of tele or the edge of wide. In this case, please send zoom stop command.

When Network Camera is set to "desktop setting mode" (the camera is to be installed with the dome side up), the direction of Pan/Tilt is same as "ceiling setting mode".

When using 360-degree Network Camera, please refer to "4.7 About 360-degree Network Camera".

Sequence**6.4 CameraControl**

Sample program code

[HTML] ..¥Sample Program¥PS-API¥HTML¥004_CameraControl

Reference

5.6.1.2. SetCameraPosition

Object	PSAPI Control
Method	SetCameraPosition
long	SetCameraPosition(long channel long pan, long tilt, long zoom, long focus);

Description

Set Pan, Tilt, Zoom and Focus values in absolute angle.
SetCameraPosition is valid to a Network Camera.

Argument

channel	1 (Fixed)	Specify the video channel.
pan	-475 to 3599	Specified Pan value -475 : -47.5 [degree] (Left) 3599 : 359.9 [degree] (Right)
tilt	-900 to 900	Specified Tilt value -900 : -90 [degree] (Upper) 900 : 90 [degree] (Lower) * The direction of Pan/Tilt is for ceiling setting mode. (The camera is to be installed with the dome side down.)
zoom	10 to 9999	Specified Zoom value 10 : x1 9999 : x999.9
focus	1 to 9999	Specified Focus value 1 : 0.1 [m] 9999 : 999.9 [m]

Return value

0	Success
Except 0	Error code

Error

Error is defined by the return value.
Get the error information by OnError event.

Note

Depending on the camera model, the valid range (angle, zoom) is different.

Depending on the camera model, a PoE + (compliant with IEEE802.3at) / PoE ++ (compliant with IEEE802.3bt) compatible hub or power supply device may be required. Please refer to the device manual.

Tilt cannot be specified over 900. If the tilt exceeds 90°, flip the Pan position 180° and adjust the tilt position.

The got value by using GetCameraPosition is different from the set value by using SetCameraPosition.

When Network Camera is set to “desktop setting mode” (the camera is to be installed with the dome side up), the plus value of Tilt works as Lower and the minus value of Tilt works as Upper. The direction of Pan is same as “ceiling setting mode”.

Reference

5.6.1.3. GetCameraPosition

Object	PSAPI Control
---------------	----------------------

Method	GetCameraPosition
---------------	--------------------------

long	GetCameraPosition(long channel);
------	------------------------------------------

Description

Get Pan, Tilt, Zoom and Focus values in absolute angle.

GetCameraPosition is valid to a Network Camera.

The got absolute angle values for Pan/ Tilt/ Zoom/ Focus are set to CameraPosPan/ CameraPosTilt/ CameraPosZoom/ CameraPosFocus properties.

Argument

channel	1 (Fixed)	Specify the video channel.
---------	-----------	----------------------------

Return value

0	Success
---	---------

Except 0	Error code
----------	------------

Error

Error is defined by the return value.
Get the error information by OnError event.

Note

Depending on the camera models, the valid range (angle, zoom) is different.
The got value by using GetCameraPosition is different from the set value by using SetCameraPosition.

When Network Camera is set to “desktop setting mode” (the camera is to be installed with the dome side up), Lower is the plus value of Tilt and Upper is the minus value of Tilt. The direction of Pan is same as “ceiling setting mode”.

[HTML] ..¥Sample Program¥PS-API¥HTML¥005_CameraOperation

Reference

5.6.1.4. CameraOperation

Object	PSAPI Control		
Method	CameraOperation		
long	CameraOperation(long channel long command, long data, long mode);		
Description			
Operate camera such as auto track, auto pan, auto focus.			
Argument			
channel	1 : Network Camera, GXE100 1 to 3 : S8573, X86530-Z2 1 to 4 : Encoder, X8570, X8571, S8574, X86531-Z2 NX100, NU101 1 to 8 : NU201 1 to 16 : ND200, HD300, HD600/700, NU300/301 1 to 24 : NV200, NV250 1 to 32 : ND300, NV300, NX200, NX300, NX310 1 to 64 : ND400, NX410 1 to 128 : NX400, NX510	Specify the video channel. X8570, X8571, S8573, S8574, X86530-Z2, X86531-Z2 can use "Super Dynamic" function for specified channel. However, when Image capture mode on S8573, S8574, X86530-Z2, X86531-Z2 is "Quad" or "Panorama", "Super Dynamic" function works for all channels regardless of the specified channel value.	
command	0 : No operation 1 : Auto Track 2 : Auto Pan 3 : Auto Focus 4 : Set Preset 5 : Call Preset 6 : Delete Preset 7 : Auto Back Focus 8 : Super Dynamic 9 : Preset sequence 10 : Auto sort 11 : Patrol	Encoder, HD300, NWDR and HD600/700 don't support "6 : Delete Preset", "7 : Auto Back Focus" and "8 : Super Dynamic". NW camera, GXE500, GXE100, NWDR and NX Series don't support "10 : Auto sort".	

Argument

data	[Set / Call / Delete Preset position] 0 : Home position 1 to 256 : NWDR NX Series Encoder, HD300, Network Camera	Preset position number When command is specified to "0, 1, 2, 3, 7, 10", data is ignored even if having a value. When command is specified to "4, 6", "0 : Home position" cannot be set.
	[Super Dynamic] 0 : OFF 1 : ON(Normal) 2 : ON(High) 3 : ON(Super Dynamic)	
	[Preset sequence] 1 : HD300, NWDR, NX Series Encoder HD600/700 1 to 3 :Network Camera	For preset sequences, if data is specified as an out-of-range value, it works as data = 1.
	[Patrol] 1 : HD300, NWDR, NX Series NT304, NT314, HD600/700 1 to 4 :GXE500, GXE100, Network Camera	
mode	0 : blocking Except 0 : Non-blocking	Blocking mode. When calling this method with non-blocking mode, OnOpStatusCB needs to have implementation, and OnOpStatusCBEnable needs to be set to "1" to get a result.

Return value

0	Success
Except 0	Error code

Error

Error is defined by the return value.
Get the error information by OnError event.

Note

The target device doesn't support the specified control, PS-API returns error.

Depending on the camera model, a PoE + (compliant with IEEE802.3at) / PoE ++ (compliant with IEEE802.3bt) compatible hub or power supply device may be required. Please refer to the device manual.

When controlling HD300, HD600/700 or encoder, any control return success but the behavior depends on the analog camera models.

When controlling HD300, HD600/700 or encoder, Auto pan and Auto track return success but the behavior depends on the analog camera setting.

In case that the target device is HD300, HD600/700 or encoder, the got status information isn't same as the device behavior because the behavior depends on the analog camera setting.

In case of Call preset, if "data" (the preset position number) that doesn't have a position is specified, Camera will not work.

In case that the target device is HD300, HD600/700 or encoder, even if the related analog camera doesn't support 65 or higher preset position number, PS-API doesn't return error.

In case that the target device is X4571 even if the Super Dynamic doesn't support "2 : ON(High)" PS-API doesn't return error.

When using Set preset during Auto pan, PS-API returns error.

When using Set Preset during Auto track, Auto track stops.

When using 360-degree Network Camera, please refer to "4.7 About 360-degree Network Camera".

5.6.1.5. GetCameraOperationStatus

Object **PSAPI Control**

Method **GetCameraOperationStatus**

```
long      GetCameraOperationStatus(  
                                         long    channel  
                                         );
```

Description

Get the camera operation status such as auto track, auto pan.

Argument

channel		
	1 : Network Camera, GXE100	Specify the video channel
	1 to 4 : Encoder NX100, NU101	
	1 to 8 : NU201	
	1 to 16 : ND200, HD300, HD600/700, NU300/301	
	1 to 24 : NV200, NV250	
	1 to 32 : ND300, NV300, NX200, NX300, NX310	
	1 to 64 : ND400, NX410	
	1 to 128 : NX400, NX510	

Return value

-1	Fail to get status.
0	No operation
1	Auto track
2	Auto pan
9	Preset sequence
10	Auto sort
11	Patrol

Error

Get the error information by OnError event.

Note

In case that the target device is HD300, HD600/700 or encoder, the got status information isn't same as the device behavior because the behavior depends on the camera setting.

This method returns the status of camera control that is controlled from own instance. When the target camera is controlled by Web browser or other instances, the gotten status may be different from the device status.

Sequence

Sample program code

Reference

5.6.1.6. CameraCentering

Object	PSAPI Control		
Method	CameraCentering		
long	CameraCentering (long channel, long xPosition, long yPosition, long imageWidth, long imageHeight);		
Description			
Control the camera to the specified position becomes the center.			
Argument			
channel	1 : Network Camera, GXE100 1 to 4 : Encoder NX100, NU101 1 to 8 : NU201 1 to 16 : ND200, HD300, HD600/700, NU300/301 1 to 24 : NV200, NV250 1 to 32 : ND300, NV300, NX200, NX300, NX310 1 to 64 : ND400, NX410 1 to 128 : NX400, NX510	Specify the video channel.	
xPosition	0 and over	Specified the x position that becomes center, when the top left corner of the displayed screen is as original position. xPosition value should be less than imageWidth value. (Pixel scale)	
yPosition	0 and over	Specified the y position that becomes center, when the top left corner of the displayed screen is as original position. yPosition value should be less than imageHeight value. (Pixel scale)	
imageWidth	0 and over	Specify the displayed screen width. (Pixel scale)	
imageHeight	0 and over	Specify the displayed screen height. (Pixel scale)	
Return value			
0	Success		
Except 0	Error code		

Error

Error is defined by the return value.
Get the error information by OnError event.

Note

The precision of centering depends on a target device.

Depending on the camera model, a PoE + (compliant with IEEE802.3at) / PoE ++ (compliant with IEEE802.3bt) compatible hub or power supply device may be required. Please refer to the device manual.

When using digital zoom function, please specify the positions that is translated to the once position.

When controlling the analog camera via a HD300, HD600/700 or Encoder, error will not occur though the target analog camera doesn't support the operations.

If specifying black panel area to xPosition and yPosition, error occurs.

When using 360-degree Network Camera, please refer to "4.7 About 360-degree Network Camera".

In the case of the X6533 and S6532, use a PoE+ hub / device that is compliant with IEEE802.3at standard when Return value = -32238707.

Object	PSAPI Control
---------------	----------------------

Event	OnOpStatusCB
--------------	---------------------

void	OnOpStatusCB (long status);
------	-------------------------------------

Description

Notify the camera operation status change to the application when CameraOperation method runs with non-blocking mode.

Argument

status	-1 : Fail to get status. 0 : No operation 1 : Auto track 2 : Auto pan 9 : Preset sequence 10 : Auto sort 11 : Patrol	Specify a device operation status value.
--------	----------------------------------------------------------------------------------------------------------------------------------------	------------------------------------------

Return value

None

Error

Note

Please don't use PS-API functions in the notified event.

In case that the target device is HD300, HD600/700 or encoder, the got status information isn't same as the device behavior because the behavior depends on the camera setting.

Sequence

Sample program code

Reference

5.7. Alarm Group

5.7.1. Method

5.7.1.1. AlarmOperation

Object	PSAPI Control
Method	AlarmOperation
long	AlarmOperation(long channel, long command, long mode);

Description

Reset current device alarm state.

Or trigger a device alarm by the application.

Trigger operation is valid to only NWDR and NX Series.

Not used and alarm reset is valid to all devices.

Argument

channel	[Trigger ON/OFF] 1 to 16 : ND200, HD600/700 1 to 24 : NV200 1 to 32 : ND300 1 to 64 : ND400 1 to 128 : NV300, NV250, NX Series [Alarm reset] 1 : Network Camera, GXE100 1 to 4 : Encoder 1 to 16 : ND200, HD300 HD600/700 1 to 24 : NV200 1 to 32 : ND300 1 to 64 : ND400 1 to 128 : NV300, NV250, NX Series	Specify the video channel.
command	0 : not used. 1 : alarm reset 2 : trigger on 3 : trigger off all channels 4 : trigger off specified channel	

Argument

mode	0 : blocking Except 0 : Non-blocking	Blocking mode. When calling this method with non-blocking mode, OnAlmStatusCB needs to have implementation, and OnAlmStatusCBEnable needs to be set to "1" to get a result.
------	-----------------------------------------	--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------

Return value

0	Success to start an operation
Except 0	Error code

Error

Error is defined by the return value.
Get the error information by OnError event.

Note

•In case of command=1/3/4 is excuted ,Alarm and Event Recording status will be below.

command	Result	
	Alarm Status	Event Recording *1
1	Reset	Turn off recording all channels
3	Reset	Turn off recording all channels
4	Reset	Turn off recording specified channel

*1 Only Event Recording Turn off

5.7.3. Event

5.7.3.1. OnAlmStatus

Object	PSAPI Control
Event	OnAlmStatus
void	OnAlmStatus(long channel, long type, BSTR timeDate, long status);

Description

The alarm status change notification function is to pass alarm status from PS-API to the application.

Argument

channle	0 : No channel 1 : Network Camera, GXE100 1 to 4 : Encoder 1 to 16 : ND200, HD300, HD600/700 1 to 24 : NV200 1 to 32 : ND300 1 to 64 : ND400 1 to 128 : NV300, NV250, NX Series 1 to 32 : Terminal number	Specify a video channel or terminal number for the device.
type	0 : Terminal alarm 1 : Video loss alarm 2 : VMD alarm 3 : Command alarm 4 : Other	Specify an alarm trigger type.
tiemDate	Local time	Local time when an alarm trigger happens.
status	0 : Reset 1 : Active 2 : Status unsupported (In case of Network Camera or Encoder)	Specify the current alarm operation state.

Return value

None

Error

Note

Please don't use PS-API functions in the notified event.

In case of Network camera or encoder, even if an alarm occurs or alarm is reset, OnAlmStatus will not occur because alarm status information isn't supported.

In case of HD300, OnAlmStatus will not occur by emergency events.

5.8. FTP Group

5.8.1. Method

5.8.1.1. FtpGet

Object PSAPI Control

Method

```
long FtpGet(  
    long channel,  
    char* startDate,  
    char* endDate,  
    long dataType,  
    long eventType,  
    char* fileName,  
    long& status,  
    long mode,  
    IAppCallBack* pSender  
);
```

Description

Get video, audio and recording event information data from a target device via FTP.

This method does not work with NX Series.

NX100,NX200,NX300,NX400 doesn't work V5.00 or later versions.

Other NX Serie doesn't work V1.00 or later versions.

Please use "5.4.1.45 HttpDownload".

Argument

channel	1 to 4 : NX100 1 to 16 : ND200, HD300, HD600/700 1 to 24 : NV200, NV250 1 to 32 : ND300, NV300, NX200, NX300	Specify the video channel.
startDate	1 to 64 : ND400 1 to 128 : NX400	
endDate	yyyy/mm/dd hh:mm:ss	Download the recording data that started recording after the specified time.
	yyyy/mm/dd hh:mm:ss	Download the recording data that start recording before the specified time. Please specify the duration between startDate and endDate within 30 minutes(except for NX Series) or 60 minutes(in case of NX Series).
dataType	0 : Video 1 : Video and Audio 2 : Recording event information	Specify the downloaded data type

Argument

eventType

Bit 0 to Bit 14 :

Specify the recording event kind by 32 digit binary.

Bit 0 : Emergency (EMR)

Bit 1 : Manual (MAN)

Bit 2 : Schedule (SCH)

Bit 3 : Terminal (TRM)

Bit 4 : Command alarm (COM)

Bit 5 : Camera site alarm (CAM/SITE)

* In case of HD300, Bit5 is VMD.

Bit 6 : SD Backup (SD)

Bit 7 : Video Loss (LOSS)

Bit 8 : VMD alarm (VMD)

Bit 9 : Motion alarm (CMTN)

Bit 10 : Loitering alarm (CSTY)

Bit 11 : Removal alarm (CRMV)

Bit 12 : Scene change alarm (CSCD)

Bit 13 : Terminal alarm (CTRM)

Bit 14 : Direction alarm (CDRT)

Bit 15 to Bit 32 : Reserved

Bit	HD300	ND200 ND300 ND400	NV200 NV250 NV300	HD600 HD700	NX100 NX200 NX300 NX400
0	EMR	EMR	-	EMR	EMR
1	MAN	MAN	-	MAN	-
2	SCH	SCH	SCH	SCH	SCH
3	TRM	TRM	TRM	TRM	TRM
4	COM	COM	COM	COM	COM
5	(VMD)	CAM	CAM	SITE	CAM
6	-	SD	-	-	SD
7	LOSS	-	-	LOSS	-
8	VMD	-	-	VMD	-
9	-	-	-	CMTN	-
10	-	-	-	CSTY	-
11	-	-	-	CRMV	-
12	-	-	-	CSCD	-
13	-	-	-	CTRM	-
14	-	-	-	CDRT	-

Bit map format

MSB	-	-	-	-	-	-	LSB
0	0	0	...	0	0	0	0
Bit	Bit	Bit	...	Bit	Bit	Bit	Bit
31	30	29		3	2	1	0

e.g. Emergency + Terminal

[Binary] 0001001 ---> type = 9

Except for NX Series, SD backup search and the other type search cannot be used together at the same time.

If specifying "1" to the other bits, SD backup are ignored.

In case of NWDR and NX Series, Bit7 is ignored if it is set to "1".

In case of HD300, Bit6 is ignored if it is set to "1".

In case of HD300, Bit5 or Bit8 is VMD alarm event search.

Argument

fileName	Character strings (251 byte or less)	Specify a complete file path, and file name without extension for storing the downloaded video. An extension is added automatically.
mode	0 : blocking Except 0 : Non-blocking	Blocking mode.

Return value

0	Success
Except 0	Error code

Error

Error is defined by the return value.
Get the error information by OnError event.

Note

While executing FtpGet method with non-blocking mode, FtpGet method cannot be called from the same instance. The second FTP download starts after the first FTP download finished.

By executing FtpGet method, FTP server mode of a target device turns on. If you want to turn off FTP server mode, please call FtpServerClose method.

If there is no recording data in a target device between the specified times, PS-API creates an empty file.

If there is the same name file on the specified complete file path, it is overwritten.

When TRM/CMD/CAM/SITE/VMD/LOSS/CMTN/CSTY/CRMV/CSCD/CTRM/CDRT are specified in FTP download condition, all event pre recording data that exist between the specified time are included in the downloaded file.

In case of ND400, FTP connection is disconnected after 1 hour from starting FTP download and the unfinished file is deleted.

In case of HD600/700, the start time of downloaded data is before 12 seconds of the specified startTimeDate time.

The size of one downloaded file should be up to 1.86 GByte.

When downloading the recorded video which is high resolution/bitrate, please set the duration to be short .

It is necessary that “5.2.2.1 DeviceType”, “5.2.2.2 IPAddr”, “5.2.2.3 HttpPort”, “5.2.2.10 UserName” and “5.2.2.11 Password” are specified to download the recording data via FTP from HD300, NWDR, HD600/700 or NX Series.

During FTP download form NX Series, FTP download may fail due to the effect of stanby HDD.
(FTP 100 Response: 551 Error on input file: Input/output error.) Please re-execute at the time.

Sequence

Sample program code

Reference

5.8.1.2. FtpCancel

Object PSAPI Control

Method FtpCancel

long FtpCancel();

Description

Cancel the ftp download.

This function doesn't disconnect from a target device.

If needs to log out, please call Close method or Disconnect method.

Argument

None

Return value

0 Success

Except 0 Error code

Error

Error is defined by the return value.

Get the error information by OnError event.

Note

Sequence

Sample program code

Reference

5.8.1.3. FtpServerClose

Object	PSAPI Control
---------------	----------------------

Method	FtpServerClose
---------------	-----------------------

long	FtpServerClose();
------	-------------------

Description

Turn off the FTP server mode of a target device.

Argument

None

Return value

0	Success
---	---------

Except 0	Error code
----------	------------

Error

Error is defined by the return value.
Get the error information by OnError event.

Note

The device has one FTP server mode.

When the FTP server mode is turned off from one instance, other instances stop downloading even if they are getting data.

If calling FtpServerClose method without login to a target device(UID=-1), the PS-API instance gets a UID from PS-API in during changing the FTP server mode.

HD300 , ND400 , ND300 , NV250, NV300, NV200, NX Series and HD600/700 can't turn off the FTP server mode by FtpServerClose() method.

9	(OnPlayStatus CBEnable)	0	When using PlayLive method with non-blocking mode, please set OnPlayStatusCBEnable property to "1". If OnPlayStatusCBEnable is set to "0" in case of non-blocking mode, but application cannot receive the notification of finish processing.

Start Recorded Video Play

No.	Property / Method	Parameter	Description
10	Play	Channel, Time and Date, Blocking mode (long, BSTR long)	Start displaying the recorded video image. In case of NWDR, NX Series, HD600/700 or HD300, please set the channel to optional number that is wanted to display. Specify the date that is wanted to play recorded video. Before using Play method with non-blocking mode, please set OnPlayStatusCBEnable property to "1". If OnPlayStatusCBEnable is set to "0" in case of non-blocking mode, but application cannot receive the notification of finish processing. e.g.) 1, "2009/01/01 12:50:00", 0

Pause

No.	Property / Method	Parameter	Description
11	PlayControl	Command, Speed, Blocking mode (long, long, long)	To pause the recorded video play, set command to "3". Set speed to "1". Before using PlayControl method with non-blocking mode, please set OnPlayStatusCBEnable property to "1". If OnPlayStatusCBEnable is set to "0" in case of non-blocking mode, but application cannot receive the notification of finish processing. e.g.) 3, 1, 0

Restart the network playback (or Backward)

No.	Property / Method	Parameter	Description
12	PlayControl	Command, Speed, Blocking mode (long, long, long)	When restart the network playback, set the command to "4". When start Backward, set the command to "5". Set speed to "1". Before using PlayControl method with non-blocking mode, please set OnPlayStatusCBEnable property to "1". If OnPlayStatusCBEnable is set to "0" in case of non-blocking mode, but application cannot receive the notification of finish processing. e.g.) 5, 1, 0

Start the Fast Forward (or Rewind)

No.	Property / Method	Parameter	Description
13	PlayControl	Command, Speed, Blocking mode (long, long, long)	When start Fast Forward, set the command to "8". When start Rewind, set the command to "9". Set speed to "1". Before using PlayControl method with non-blocking mode, please set OnPlayStatusCBEnable property to "1". If OnPlayStatusCBEnable is set to "0" in case of non-blocking mode, but application cannot receive the notification of finish processing. e.g.) 8, 1, 0

Display the next frame (or the previous frame)

No.	Property / Method	Parameter	Description
14	PlayControl	Command, Speed, Blocking mode (long, long, long)	When display the next frame, set the command to "6". When display the previous frame, set the command to "7".Set speed to "1". Before using PlayControl method with non-blocking mode, please set OnPlayStatusCBEnable property to "1". If OnPlayStatusCBEnable is set to "0" in case of non-blocking mode, but application cannot receive the notification of finish processing. e.g.) 6, 1, 0

Stop Recorded Video Play

No.	Property / Method	Parameter	Description
15	PlayControl	Command, Speed, Blocking mode (long, long, long)	When stop the network playback, set the command to "0". Set speed to "1". Set speed to "1". Before using PlayControl method with non-blocking mode, please set OnPlayStatusCBEnable property to "1". If OnPlayStatusCBEnable is set to "0" in case of non-blocking mode, but application cannot receive the notification of finish processing. e.g.) 0, 1, 0

Logout

No.	Property / Method	Parameter	Description
16	Close/Disconnect	-	Stop the communication with the target device. When using Close method, UID will be annulled.

6.3. PlayFile

6.3.1. Operation Procedure

Event setting

No.	Property / Method	Parameter	Description
1	(OnPlayStatusCBEnable)	0	Before using PlayFile method with non-blocking mode, please set OnPlayStatusCBEnable property to "1". If OnPlayStatusCBEnable is set to "0" in case of non-blocking mode, but application cannot receive the notification of finish processing.

Start local file playback

No.	Property / Method	Parameter	Description
2	FilePassword	Password (BSTR)	Set the password to playback the video file that has password. e.g.) ""
3	PlayFile	File Name, Blocking mode (BSTR long)	Start local file playback. Specify the file name with full path. Before using PlayFile method with non-blocking mode, please set OnPlayStatusCBEnable property to "1". If OnPlayStatusCBEnable is set to "0" in case of non-blocking mode, but application cannot receive the notification of finish processing. e.g.) "c:¥¥filesample.n3r", 0

Pause

No.	Property / Method	Parameter	Description
-	Pause (Refer to 6.2 Play)		

Restart local fiel playback (or Backward)

No.	Property / Method	Parameter	Description
-	Restart local fiel playback (or Backward) (Refer to 6.2 Play)

6.4. CameraControl

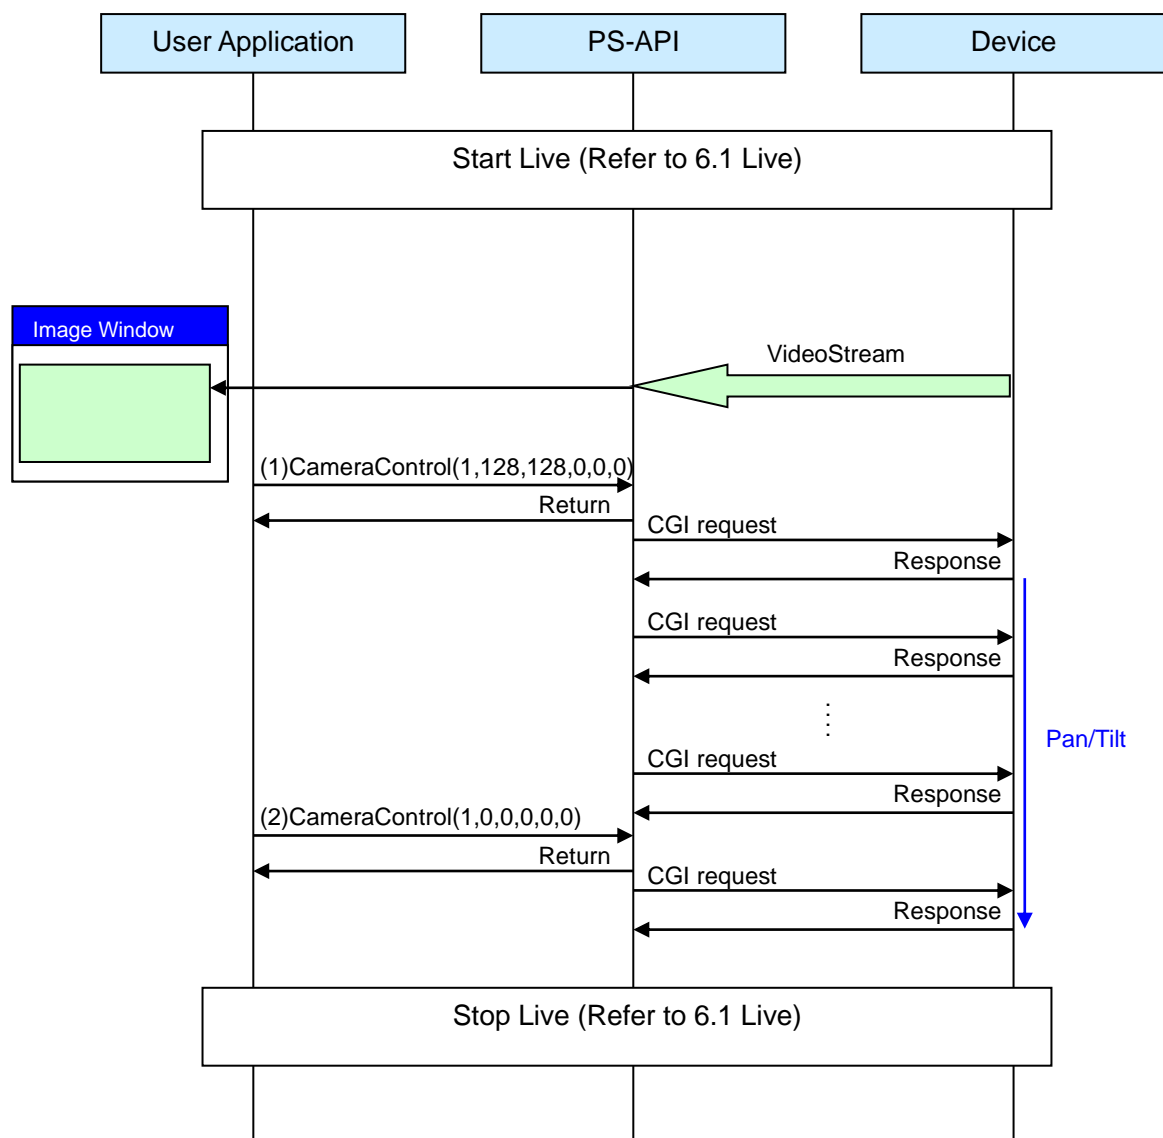

6.4.1. Operation Procedure

Camera Control

No.	Property / Method	Parameter	Description
-	Start Live (Refer to 6.1 PPlayLive)		
1	CameraControl	Channel, Pan speed, Tilt speed, Zoom speed, Focus speed, Iris open/close (long, long, long, long, long, long)	Start the camera control. In controlling, PS-API communicate with a target device. CameraControl method can be used in async. If CameraControl method is called during controlling the camera, the latest CameraControl command is given first priority. When getting the error of CaneraControl method, please set the listener class by using SetErrListener. e.g.) 1, 128, 128, 0, 0, 0
2	CameraControl	Channel, 0, 0, 0, 0, 0 (long, long, long, long, long, long)	Stop the camera control by setting to "0" the parameter that is needed to stop. e.g.) 1, 0, 0, 0, 0, 0
-	Stop Live (Refer to 6.1 PlayLive)		

6.4.2. Sequence

Camera Control

* The timing of sending CGI command is not constant, depends on the device model or the device setting.

Figure 6-14 Camera Control

6.5. CameraOperation

6.5.1. Operation Procedure

Start Live

No.	Property / Method	Parameter	Description
-	Start Live (Refer to 6.1 PlayLive)		
1	(OnOpStatusCBEnable)	0	Before using CameraOperation method with non-blocking mode, please set OnOpStatusCBEnable property to "1". If OnOpStatusCBEnable is set to "0" in case of non-blocking mode, but application cannot receive the notification of finish processing.

Auto Track

No.	Property / Method	Parameter	Description
2	CameraOperation	Channel, Command, Data, Blocking mode (long, long, long, long,)	Start auto track. Set command to "1". Set data to "0". Before using CameraOperation method with non-blocking mode, please set OnOpStatusCBEnable property to "1". If OnOpStatusCBEnable is set to "0" in case of non-blocking mode, but application cannot receive the notification of finish processing. e.g.) 1, 1, 0, 0
3	CameraOperation	Channel, Command, Data, Blocking mode (long, long, long, long,)	Stop auto track. Set command to "0". Set data to "0". Before using CameraOperation method with non-blocking mode, please set OnOpStatusCBEnable property to "1". If OnOpStatusCBEnable is set to "0" in case of non-blocking mode, but application cannot receive the notification of finish processing. e.g.) 1, 0, 0, 0

Auto Pan

No.	Property / Method	Parameter	Description
4	CameraOperation	Channel, Command, Data, Blocking mode (long, long, long, long,) (IAppCallBack*)	Start auto pan . Set command to "2". Set data to "0". Before using CameraOperation method with non-blocking mode, please set OnOpStatusCBEnable property to "1". If OnOpStatusCBEnable is set to "0" in case of non-blocking mode, but application cannot receive the notification of finish processing. e.g.) 1, 2, 0, 0
5	CameraOperation	Channel, Command, Data, Blocking mode (long, long, long, long,)	Stop auto pan. Set command to "0". Set data to "0". Before using CameraOperation method with non-blocking mode, please set OnOpStatusCBEnable property to "1". If OnOpStatusCBEnable is set to "0" in case of non-blocking mode, but application cannot receive the notification of finish processing. e.g.) 1, 0, 0, 0

Auto Focus

No.	Property / Method	Parameter	Description
6	CameraOperation	Channel, Command, Data, Blocking mode (long, long, long, long,)	Start auto focus. Set command to "3". Set data to "0". Before using CameraOperation method with non-blocking mode, please set OnOpStatusCBEnable property to "1". If OnOpStatusCBEnable is set to "0" in case of non-blocking mode, but application cannot receive the notification of finish processing. e.g.) 1, 3, 0, 0

Absolute position camera control

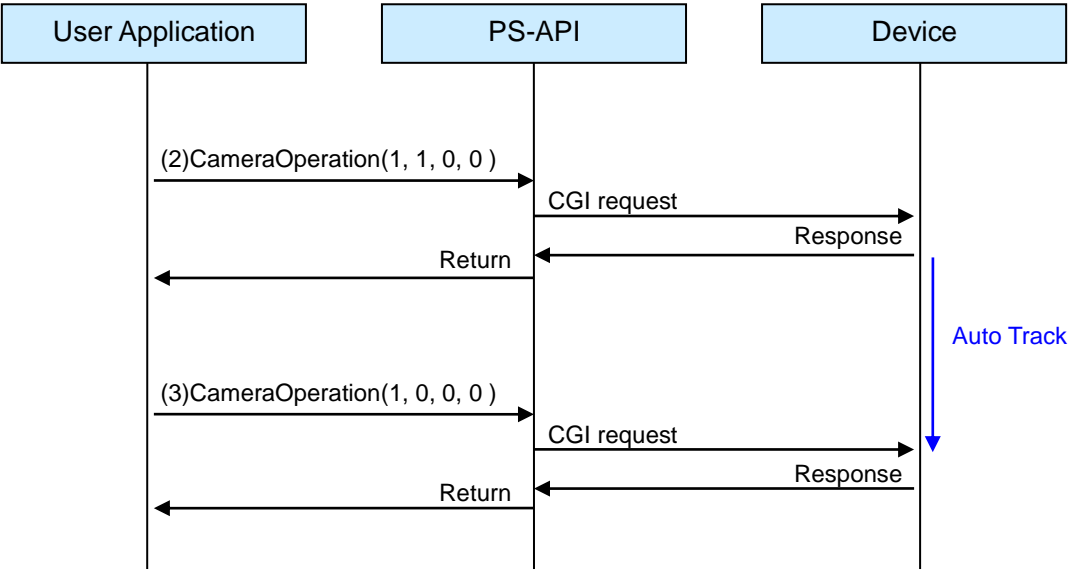

No.	Property / Method	Parameter	Description
7	GetCameraPosition	Channel	Get the absolute position value of Pan/ Tilt/ Zoom/ Focus. The absolute position value is set to CameraPosPan property, CameraPosTilt property, CameraPosZoom property, CameraPosFocus property. e.g.1) 1
8	CameraPosPan	-	The pan position value by using GetCameraPosition.
9	CameraPosTilt	-	The tilt position value by using GetCameraPosition.
10	CameraPosZoom	-	The zoom position value by using GetCameraPosition.
11	CameraPosFocus	-	The focus position value by using GetCameraPosition.
12	SetCameraPosition	Channel, Pan value, Tilt value, Zoom value, Focusvalue (long, long, long, long, long)	Specify the absolute value of Pan/ Tilt/ Zoom/ Focus. Specify the absolute value with Pan position(-475 - 3599), Tilt position (-450 - +900), Zoom position (1 - 9999), Focus position (14 - 9999). e.g.1) 1, 0, 0, 10, 14 e.g.2) 1, 360, 360, 30, 300

Stop Live

No.	Property / Method	Parameter	Description
-	Stop Live(Refer to 6.1 PlayLive)

6.6. AlmOperation

6.6.1. Operation Procedure

Login

No.	Property / Method	Parameter	Description
-	Login (Refer to 6.2 Play)		
1	(OnAlmStatusCBEnable)	0	Before using AlmOperation method with non-blocking mode, please set OnAlmStatusCBEnable property to "1". If OnAlmStatusCBEnable is set to "0" in case of non-blocking mode, but application cannot receive the notification of finish processing.

Alarm reset

No.	Property / Method	Parameter	Description
2	AlmOperation	Channel, Command, Blocking mode (long, long, long)	Reset the alarms in the target device. Alarm reset cannot be used per channel. Even if channel is specified, all alarm that is occurred in device will be reset. In case of alarm reset, set the command to "1". Before using AlmOperation method with non-blocking mode, please set OnAlmStatusCBEnable property to "1". If OnAlmStatusCBEnable is set to "0" in case of non-blocking mode, but application cannot receive the notification of finish processing. e.g.) 1, 1, 0

Trigger ON

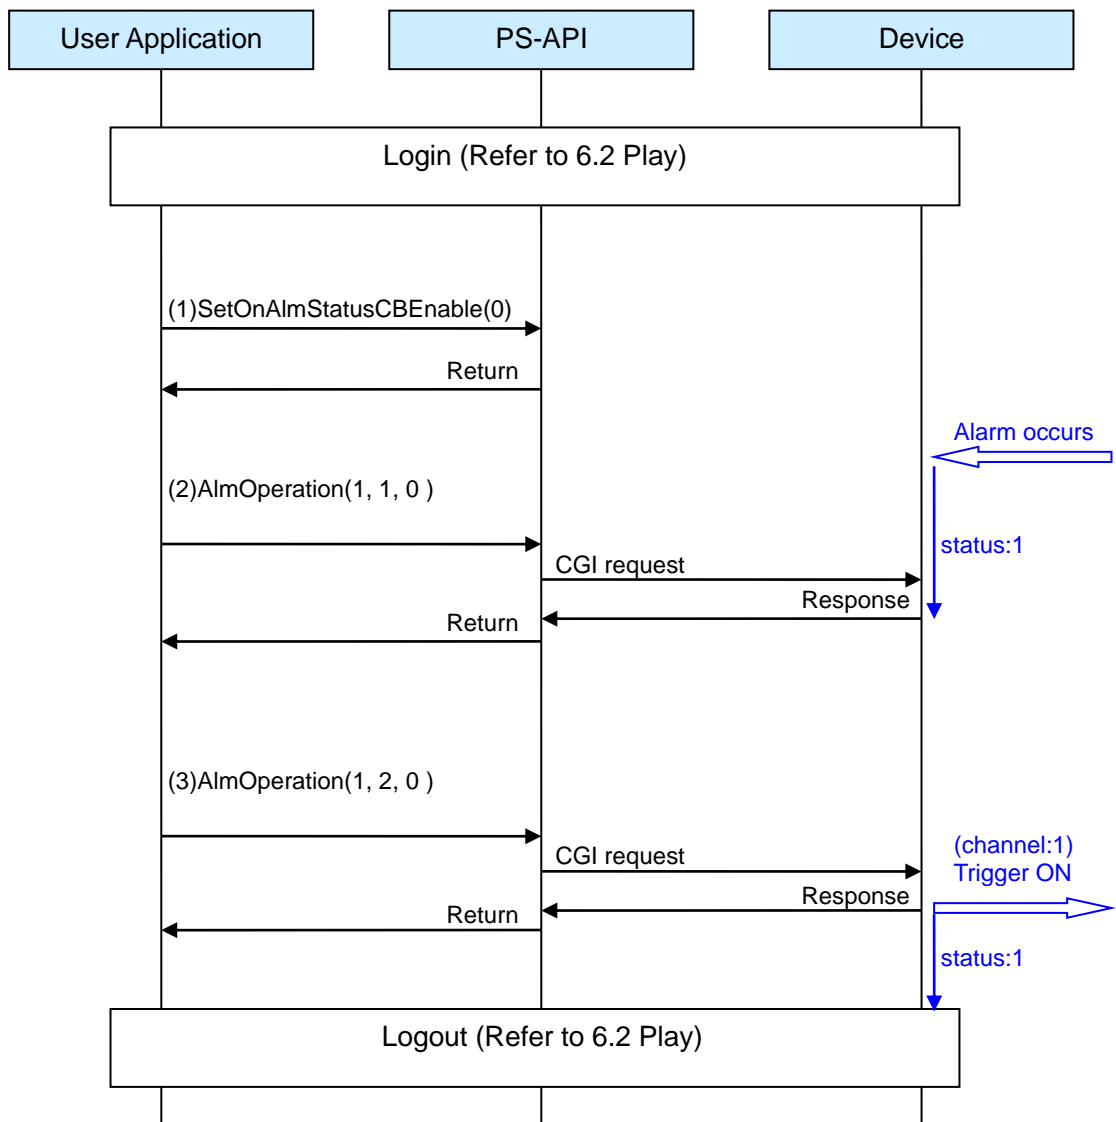

No.	Property / Method	Parameter	Description
3	AlmOperation	Channel, Command, Blocking mode (long, long, long)	Trigger a device alarm by the application. Trigger operation is valid to only NWDR and NX Series. In case of trigger ON, set the command to "2". Before using AlmOperation method with non-blocking mode, please set OnAlmStatusCBEnable property to "1". If OnAlmStatusCBEnable is set to "0" in case of non-blocking mode, but application cannot receive the notification of finish processing. e.g.) 1, 2, 0

Logout

No.	Property / Method	Parameter	Description
-	Logout (Refer to 6.2 Play)

6.10. FtpGet

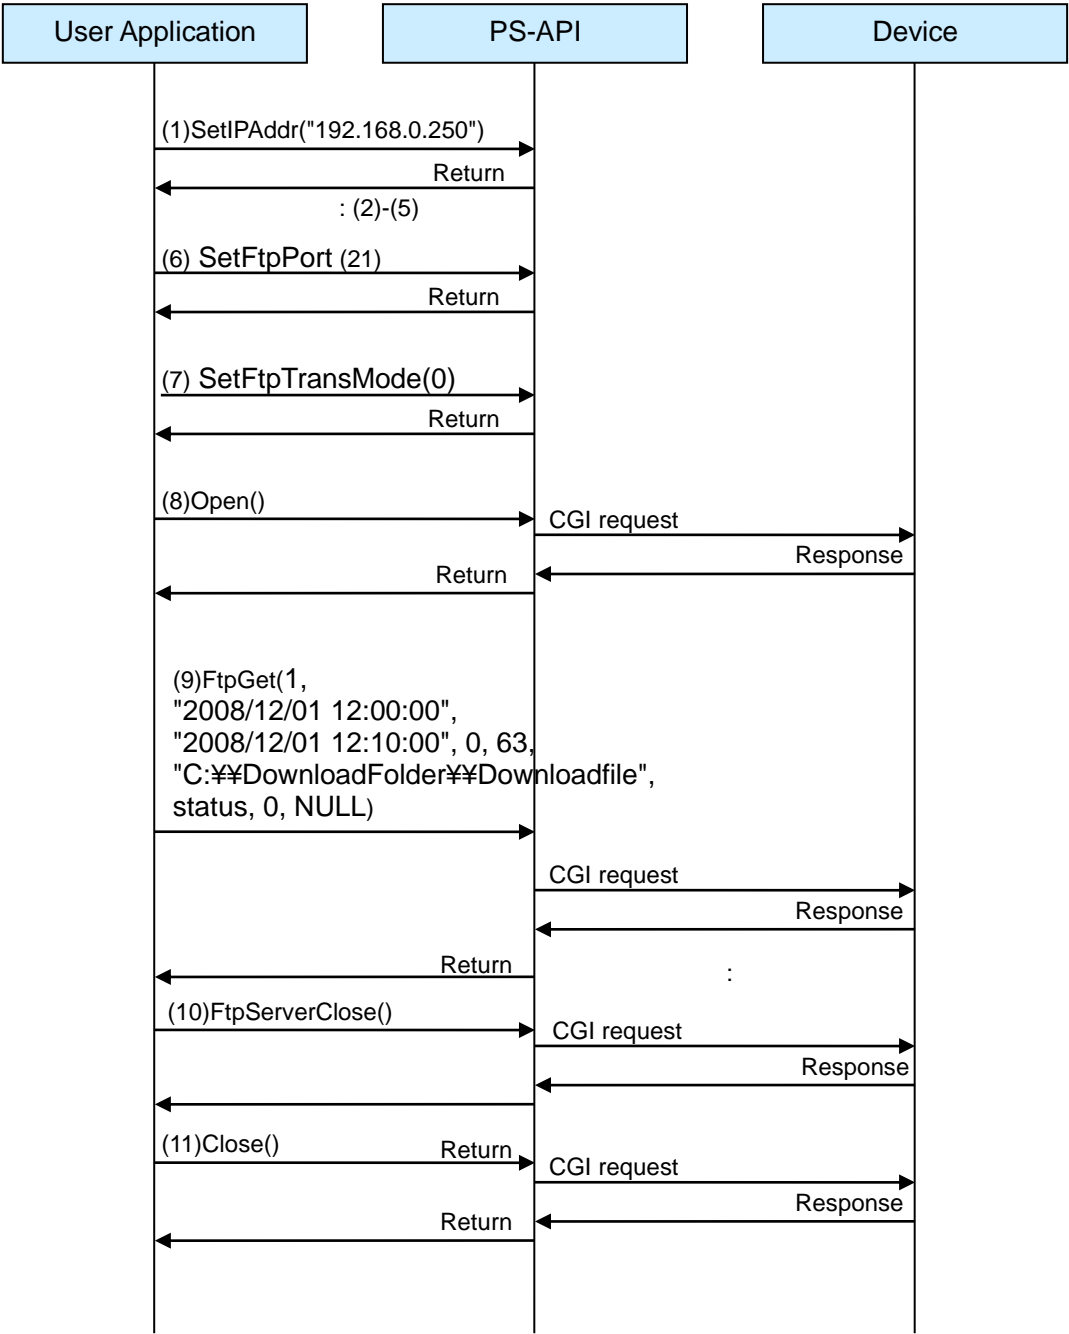

6.10.1. Operation Procedure

FTP download

No.	Property / Method	Parameter	Description
1	IPAddr	IP Address (char*)	Set IP Address into PS-API. e.g.) "192.168.0.10"
2	DeviceType	Device type (long)	Set the device type corresponding to a target device. e.g.) 2
3	HttpPort	Port number (long)	Set Http port number into PS-API. e.g.) 80
4	UserName	Character strings (char*)	Set user name into PS-API. e.g.) admin
5	Password	Character strings (char*)	Set password into PS-API. e.g.) 12345
6	FtpPort	Port number (long)	Ftp server port. e.g.) 21
7	FtpTransMode	Mode (long)	Ftp transmission mode e.g.) 0
8	Open/Connect	UID (long)	Connect to a target device. When getting a new UID, please use Open method.

No.	Property / Method	Parameter	Description
9	FtpGet	Channel, Start time&date, End time&date, Data type Event type, File Name Blocking mode, (long, BSTR BSTR, long, long, BSTR, long)	Start FTP downloading. Specify channel, start date, end date, data type, event type and file name as download condition. Before using FtpGet method with non-blocking mode, please set OnFtpStatusCBEnable property to "1". If OnFtpStatusCBEnable is set to "0" in case of non-blocking mode, but application cannot receive the notification of finish processing. e.g.) 1, "2008/12/01 12:00:00", "2008/12/01 12:10:00", 0, 63, "C:¥DownloadFolder¥Downloadfile", 0
10	FtpServerClose	-	Turn off the FTP server mode of a target device. If the PS-API instance doesn't log in yet, the PS-API instance logs in during changing the FTP server mode.
11	Close/Disconnect	-	Stop the communication with the target device. When using Close method, UID will be annulled.

6.10.2. Sequence

* The timing of sending CGI command is not constant,

6.11. Audio

6.11.1. Operation Procedure

Start Live with audio reception

No.	Property / Method	Parameter	Description
1	IPAddr	IP Address (BSTR)	Set IP Address into PS-API. e.g.) "192.168.0.10"
2	DeviceType	Device type (long)	Set the device type corresponding to a target device. e.g.) 2
3	HttpPort	Port number (long)	Set Http port number into PS-API. e.g.) 80
4	UserName	Character strings (BSTR)	Set user name into PS-API. e.g.) admin
5	Password	Character strings (BSTR)	Set password into PS-API. e.g.) 12345
6	StreamFormat	Stream type (long)	Set the stream type into PS-API. In case of NWDR, set the stream type that is same with a target channel that is wanted to display. e.g.) 0

No.	Property / Method	Parameter	Description
7	JPEGResolution/ MPEG4Resolution/ H264Resolution	Resolution (long)	It is necessary that the resolution setting is same value of the device setting. e.g.) 640
8	Open/Connect	UID (long)	Connect to a target device. When getting a new UID, please use Open method.
9	AudioRcvEnable	Reception mode (long)	Set a mode whether receiving audio stream with PlayLive or Play into PS-API. e.g.) 1
10	AudioRcvVolume	Volume (long)	Set a volume of the audio reception into PS-API. e.g.) 10
11	PlayLive	Channel, Blocking mode, (long, long)	Start displaying live image. In case of network camera, please set the channel to "1". In case of NWDR, NX Series, HD600/700 or HD300, please set the channel to number that is wanted to display. Before using PlayLive method with non-blocking mode, please set OnPlayStatusCBEnable property to "1". If OnPlayStatusCBEnable is set to "0" in case of non-blocking mode, but application cannot receive the notification of finish processing. e.g.) 1, 0

Change volume for audio reception

No.	Property / Method	Parameter	Description
12	AudioRcvVolume	Volume (long)	Change a volume of the audio reception into PS-API. e.g.) 50

Mute setting for audio reception

No.	Property / Method	Parameter	Description
13	AudioRcvMute	Mute (long)	Set a mute mode of the audio reception into PS-API. e.g.) 1

Start audio transmission

No.	Property / Method	Parameter	Description
14	AudioSendVolume	Volume (long)	Set a volume of the audio transmission into PS-API. e.g.) 10
15	AudioSendMute	Mute (long)	Set a mute mode setting of the audio transmission into PS-API. e.g.) 0
16	AudioSend	command (long)	Start or Stop the audio transmission. When starting audio transmission, command is set to "1". e.g. 1

Stop audio transmission

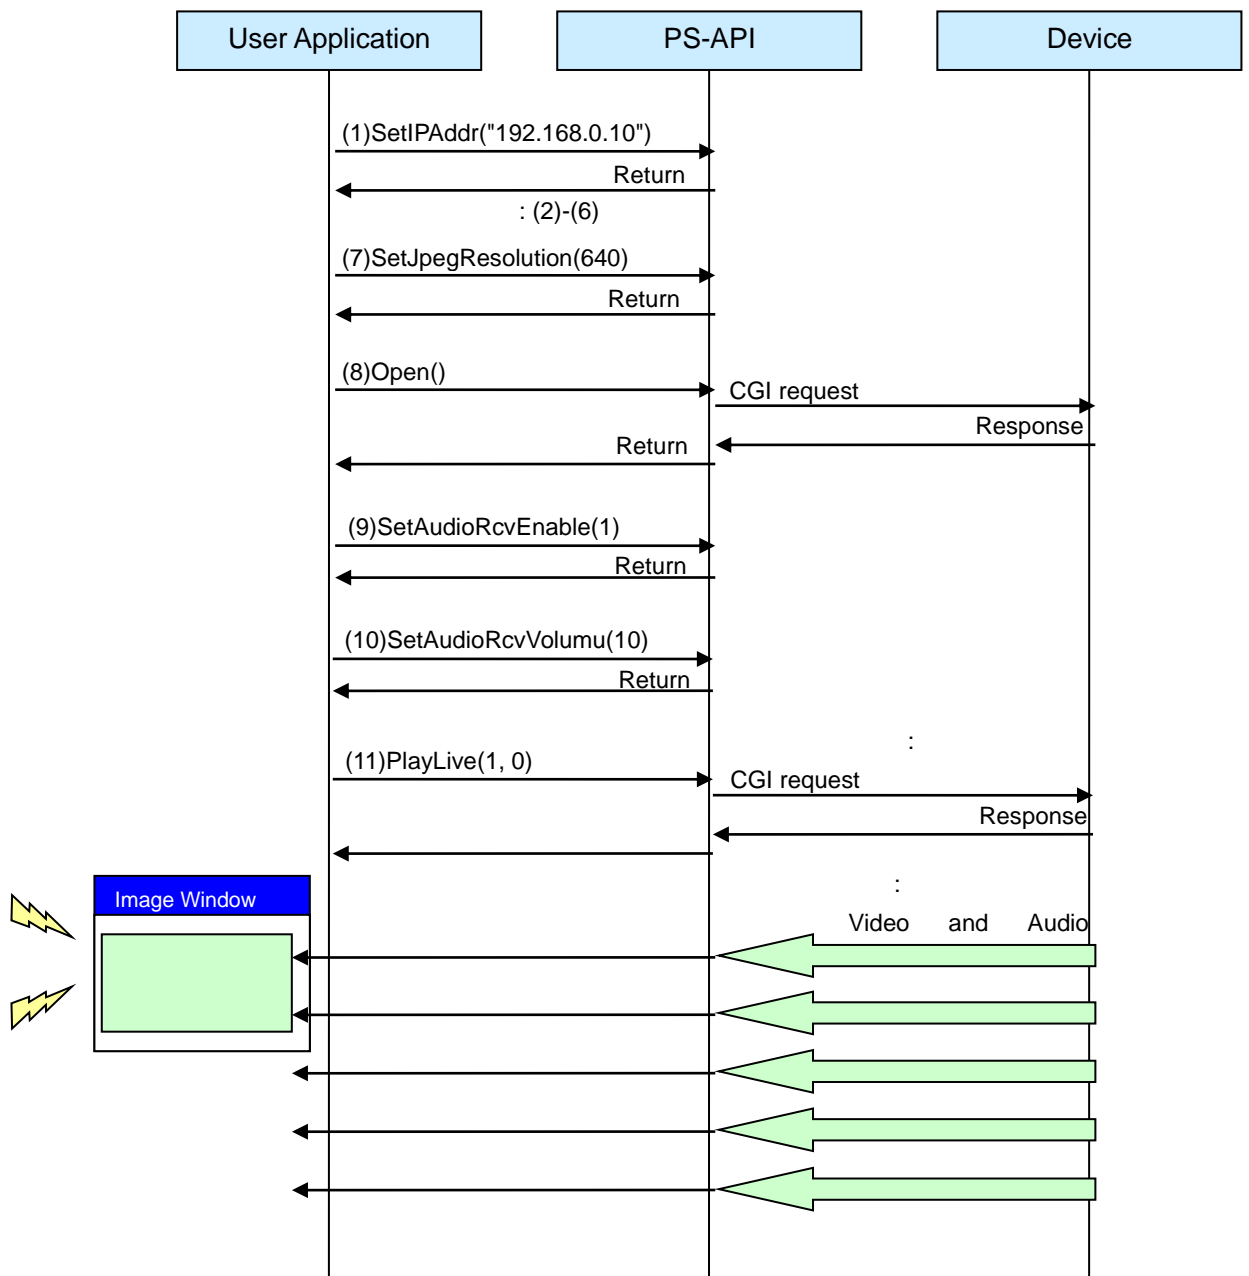

No.	Property / Method	Parameter	Description
17	AudioSend	command (long)	Start or Stop the audio transmission. When stops audio transmission, command is set to "0". e.g. 0

Stop Live

No.	Property / Method	Parameter	Description
18	PlayControl	Command, Speed, Blocking mode, (long, long, long)	To stop live, set command to "1". Set speed to "1". Before using PlayLive method with non-blocking mode, please set OnPlayStatusCBEnable property to "1". If OnPlayStatusCBEnable is set to "0" in case of non-blocking mode, but application cannot receive the notification of finish processing. e.g.) 1, 1, 0
19	AudioRcvEnable	Reception mode (long)	Set a mode whether receiving audio stream with PlayLive or Play into PS-API. e.g.) 0
20	Close/Disconnect	-	Stop the communication with the target device. When using Close method, UID will be annulled.

6.16. HttpMP4Download

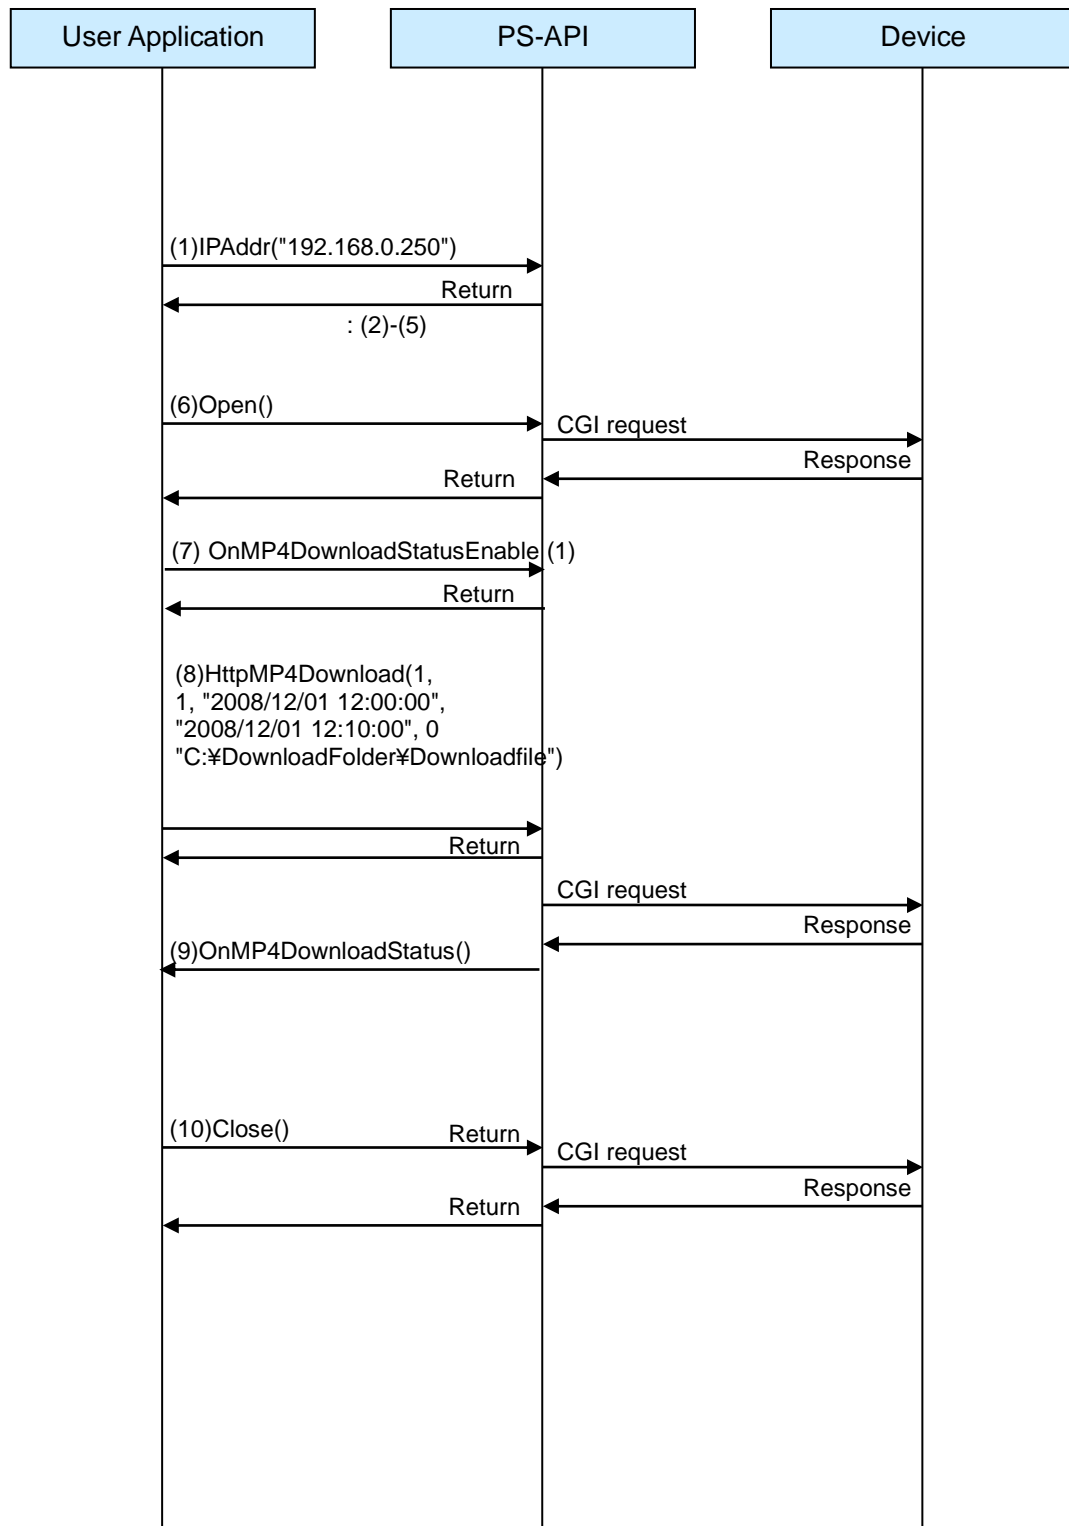

6.16.1.Operation Procedure

MP4 file Download(HTTP)

No.	Property / Method	Parameter	Description
1	IPAddr	IP Address (BSTR)	Set IP Address into PS-API. e.g.) "192.168.0.250"
2	DeviceType	Device type (long)	Set the device type corresponding to a NX series. 6
3	HttpPort	Port number (long)	Set Http port number into PS-API. e.g.) 80
4	UserName	Character strings (BSTR)	Set user name into PS-API. e.g.) ADMIN
5	Password	Character strings (BSTR)	Set password into PS-API. e.g.) 12345
6	Open/Connect	UID (long)	Connect to a target device. When getting a new UID, please use Open method.
7	OnMP4DownloadStatusEnable	-	Set MP4 file download status notification. please set OnMP4DownloadStatusEnable property to "1".

No.	Property / Method	Parameter	Description
8	HttpMP4Download	channel, command, startTimeDate, endTimeDate, audioMode, fileName (long, long, BSTR, BSTR, long, BSTR)	Start HttpMP4Download. Specify channel, command, startTimeDate, endTimeDate, audioMode and fileName as download condition. (This method is non-blocking mode.) e.g.) 1, 1, "2008/12/01 12:00:00", "2008/12/01 12:10:00", 0, "C:¥DownloadFolder¥Downloadfile"
9	OnMP4DownloadStatus	status filename (long BSTR)	Notified when MP4 download status changes.
10	Close/Disconnect	-	Stop the communication with the target device. When using Close method, UID will be annulled.

6.16.2. Sequence

* The timing of sending CGI command is not constant,

6.17. SSL(HTTPS)

6.17.1.Operation Procedure

Open with SSL

手順	Property / Method	Parameter	Description
-	Set target device to HTTPS settings		
1	IPAddr	IP Address (BSTR)	Set IP Address into PS-API. e.g.) "192.168.0.10"
2	DeviceType	Device type (long)	Set the device type corresponding to a target device. e.g.) 2
3	UserName	Character strings (BSTR)	Set user name into PS-API. e.g.) admin
4	Password	Character strings (BSTR)	Set password into PS-API. e.g.) 12345
5	HttpPort	Port number (long)	Set Https port number into PS-API. e.g.) 443
6	SecureCommunication Mode	HTTP/HTTPS (long)	Set Http or Https mode into PS-API. e.g.) 1
7	CertificateVerifyEnable	check the certificate (long)	Set whether to check the certificate of connecting device during HTTPS communication e.g.) 0
8	Open/Connect	UID (long)	Connect to a target device. When getting a new UID, please use Open method.
*	InternetMode	InternetMode (long)	Set internet mode into PS-API. e.g.)1

6.17.2. Sequence

6.18. MultiPlayLive_SID

6.18.1. Operation Procedure

Start Live

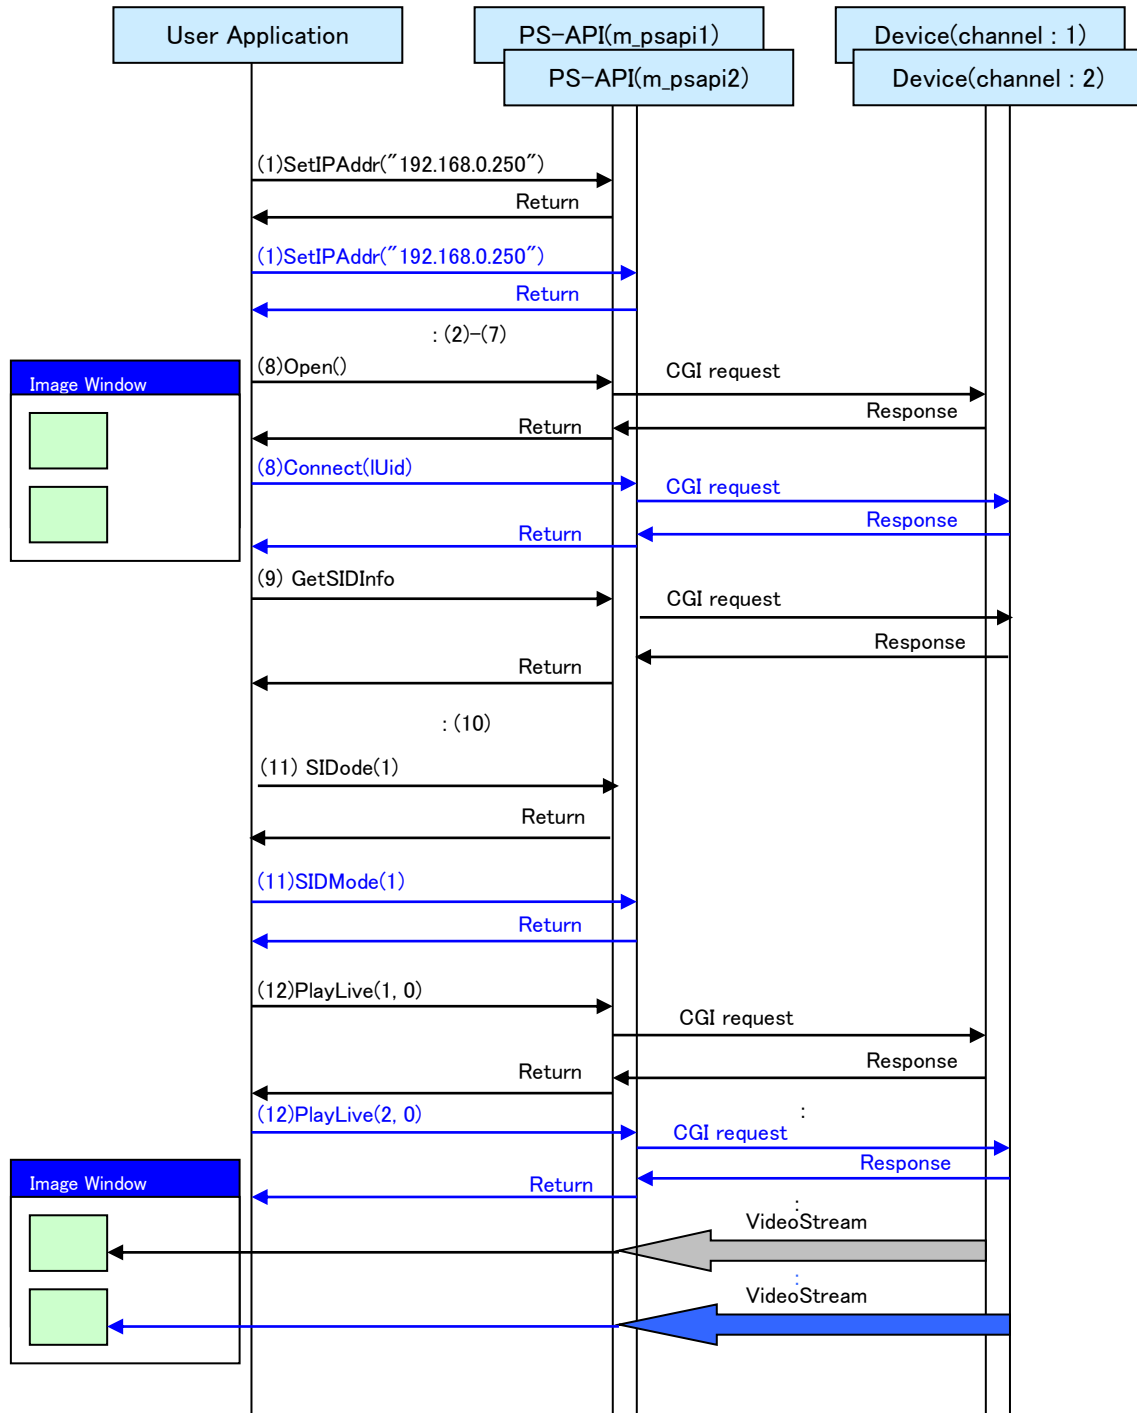

No.	Property / Method	Parameter	Description
1	IPAddr	Refer to 6.1 PlayLive	Refer to 6.1 PlayLive
2	DeviceType	Refer to 6.1 PlayLive	Refer to 6.1 PlayLive
3	HttpPort	Refer to 6.1 PlayLive	Refer to 6.1 PlayLive
4	UserName	Refer to 6.1 PlayLive	Refer to 6.1 PlayLive
5	Password	Refer to 6.1 PlayLive	Refer to 6.1 PlayLive
6	StreamFormat	Refer to 6.1 PlayLive	Refer to 6.1 PlayLive
7	JPEGResolution/ MPEG4Resolution/ H264Resolution	Refer to 6.1 PlayLive	Refer to 6.1 PlayLive
8	Open/Connect	Refer to 6.1 PlayLive	Refer to 6.1 PlayLive Call Open method on the first instance. For the second and subsequent instances, connect using the UID obtained by the first Open method.
9	GetSIDInfo	-	Call method only one instance. The information of StreamID support is set to SIDInfoMode property. The maximum number of StreamID that recorder can issue is set to SIDInfoMax property. The number of StreamID which is in use is set to SIDInfoUse property.
10	SIDInfoMode	StreamID support (long)	Refer to the SIDInfoMode property and check whether StreamID mode is supported. If SIDInfoMode is 0 (not supported), refer to the sequence of 6.9 MultiPlay Live. e.g.) 1
11	SIDMode	StreamID Mode(long)	Set SIDMode on every instance that perform PlayLive method. e.g.) 1
12	PlayLive	Refer to 6.1 PlayLive	Refer to 6.1 PlayLive

Stop Live

No.	Property / Method	Parameter	Description
13	PlayControl	Refer to 6.1 PlayLive	Refer to 6.1 PlayLive
14	Close/Disconnect	Refer to 6.1 PlayLive	Refer to 6.1 PlayLive If there are more than one instance, call Disconnect. call Close on the last one instance

6.18.2. Sequence

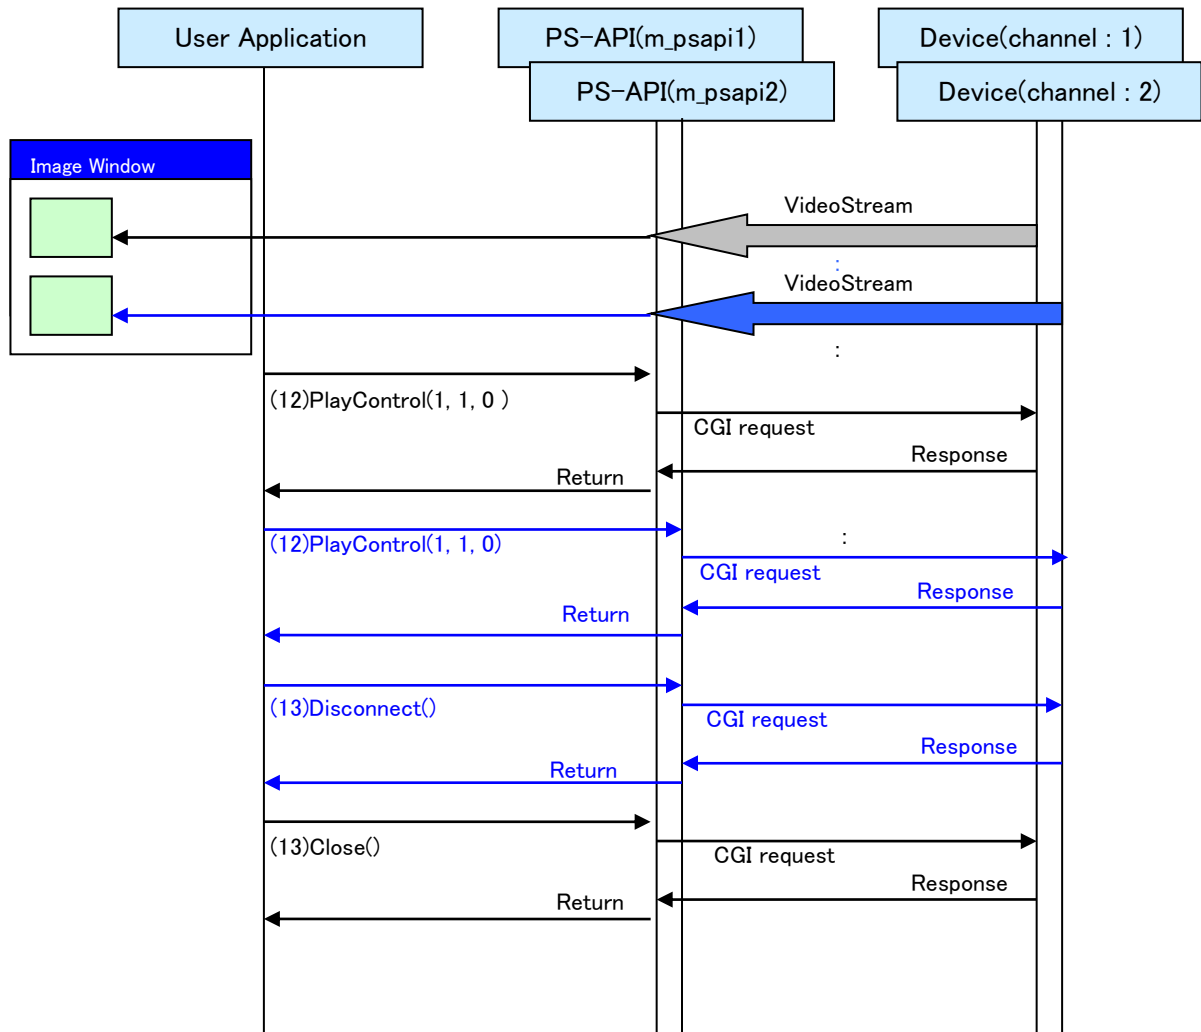

Start Live

* The timing of sending CGI command is not constant, depends on the device model or the device setting.

Figure 6-37 Start Live

Stop Live

* The timing of sending CGI command is not constant, depends on the device model or the device setting.
