

**SNMP MIB manual**  
for i-PRO Recorder

Ver. 1.2

i-PRO Co., Ltd.

## Revision History

Version	Date	Chapter #	Comment	Trigger
<b>1.0</b>	1/4/2022	-	First edition.	-
<b>1.2</b>	25/9/2025	1.2	Added supported models	Launch of new recorder
		3.2.2.7	Added items to the Network log type table	Software update
		3.2.2.8	Added items to the table of Event	Software update
		3.2.2.9	Added items to the table of Error	Software update
		3.2.2.10	Added items to the table of Operation	Software update

# 1. Introduction

This document describes the necessary setting information for the network monitoring system to monitor the devices for surveillance system using the SNMP protocol, and tips for the network administrator to maintain the devices.

This document does not provide detailed descriptions of SNMP specifications or standard MIBs.

## 1.1. Definition

Word	Definition
<b>SNMP</b>	Simple Network Management Protocol
<b>SNMP agent</b>	In this document, SNMP agent refers to a recorder or a decoder.
<b>SNMP manager</b>	An SNMP client that can monitor an SNMP agent.
<b>Network monitoring system</b>	A system for monitoring devices connected to a network. Although the status of network devices can be obtained not only by SNMP but also by other methods, in this document, it refers to a system that has a function as an SNMP manager.
<b>Network administrator</b>	An administrator who receives network device error notifications issued by the network monitoring system and maintains according to the conditions of each device.
<b>MIB</b>	Management Information Base
<b>Standard MIB</b>	MIB as defined in RFC
<b>Extended MIB</b>	A MIB that defines the object ID below “.iso(1).org(3).dod(6).internet(1).private(4).enterprises(1)”. The MIBs extended for the target devices can be downloaded from the web page.
<b>I-PRO-MIB</b>	Name of the MIB that defines the object ID that i-PRO Co., Ltd. applied for in the extended MIB.
<i>ipro</i>	Object name defined in the I-PRO-MIB.

## 1.2. Target devices

This document covers the following network recorders:

<b>Product Model</b>	<b>Applicable Firmware Versions</b>
WJ-NX400, WJ-NX300, WJ-NX200, WJ-NX100	5.00 or later
WJ-NU301, WJ-NX300, WJ-NU201, WJ-NU101	1.00 or later
WJ-NX510, WJ-NX410, WJ-NX310	1.00 or later

## 2. Abstract

### 2.1. SNMP version

The network recorders support v1, v2c and v3.

### 2.2. SNMP operation

All devices do not support the SNMP *SET* command.

## 3. MIBs supported by i-PRO recorders

The i-PRO recorders respond with standard MIB (mainly mib-2) and extended MIB (*ipro*). This chapter describes the response contents of the standard MIB supported by the i-PRO recorders and the OID of the extended MIB.

Overview of SNMP responses that i-PRO recorders respond to:

```
+ iso(1)
| + org(3)
| | + dod(6)
| | | + internet(1)
| | | | + mgmt(2)
| | | | | + mib-2(1)
| | | | | + system(1)
| | | | | + interfaces(2)
| | | | | + ip(4)
| | | | + private(4)
| | | | + enterprises(1)
| | | | | + ipro(57501)
| | | | | + general(1)
| | | | | + recorder(200)
```

### 3.1. Standard MIB

The i-PRO recorders support OID responses defined by the following standard MIBs at maximum.

- SNMPv2-MIB
- IF-MIB
- IP-MIB
- RFC1213-MIB

## 3.2. Extended MIB of i-PRO Co., Ltd.

The i-PRO recorders respond to the extended OID 57501 acquired by i-PRO Co., Ltd. as defined in this chapter. The response OID changes depending on the i-PRO recorder's ability and status.

For details on how to input the extended MIB, refer to the manual of the monitoring system you are using.

### 3.2.1. I-PRO-MIB

I-PRO-MIB is OID 57501 for i-PRO Co., Ltd. that has been applied to IANA, defines .iso (1) .org (3) .dod (6) .internet (1) .private (4) .enterprises (1) .ipro (57501).

I-PRO-MIB defines .iso (1) .org (3) .dod (6) .internet (1) .private (4) .enterprises (1) .ipro (57501) .general(1) and 5 responsive OIDs.

SNMPv2-SMI and SNMPv2-TC are required to interpret this MIB.

This MIB is required to read the I-PRO-REC-MIB.

```
+ iso(1)
| + org(3)
| | + dod(6)
| | | + internet(1)
| | | | + private(4)
| | | | | + enterprises(1)
| | | | | | + ipro(57501)
| | | | | | | + general(1)
| | | | | | | | + manufacture(1)
| | | | | | | | | + model(2)
| | | | | | | | | | + serialNumber(3)
| | | | | | | | | | | + firmwareVersion(4)
| | | | | | | | | | | | + dayTime(5)
```

#### manufacture(1)

<b>objectName</b>	manufacturer
<b>object id</b>	.1.3.6.1.4.1.57501.1.1
<b>SYNTAX RANGE</b>	DisplayString (SIZE (0..63))
<b>DESCRIPTION</b>	Vendor name, "i-PRO"

#### model(2)

<b>objectName</b>	model
<b>object id</b>	.1.3.6.1.4.1.57501.1.2
<b>SYNTAX RANGE</b>	DisplayString (SIZE (0..47))
<b>DESCRIPTION</b>	Model number

#### serialNumber(3)

<b>objectName</b>	serialNumber
<b>object id</b>	.1.3.6.1.4.1.57501.1.3
<b>SYNTAX RANGE</b>	DisplayString (SIZE (0..47))
<b>DESCRIPTION</b>	Current time of the device

**firmwareVersion(4)**

<b>objectName</b>	firmwareVersion
<b>object id</b>	.1.3.6.1.4.1.57501.1.4
<b>SYNTAX RANGE</b>	DisplayString (SIZE (0..47))
<b>DESCRIPTION</b>	Serial number of the device

**dayTime(5)**

<b>objectName</b>	dayTime
<b>object id</b>	.1.3.6.1.4.1.57501.1.5
<b>SYNTAX RANGE</b>	DateAndTime
<b>DESCRIPTION</b>	Date and time of the device

### 3.2.2. I-PRO-REC-MIB

To read this MIB, I-PRO-MIB, SNMPv2-SMI, and SNMPv2-TC are required.

Summary of MIBs defined in I-PRO-REC-MIB:

```
+ ipro(57501)
| + recorder(200)
| | | + recInfo(1)
| | | | + iproRecorder(1)
| | | | + iproRecCommon(2)
| | | | | + userAccessCount(1)
| | | | | + alarmSumNum(2)
| | | | | + hddInfo(13)
| | | | | + camSyncState(15)
| | | | | + temperature(16)
| | | | | + dataInfo(19)
| | | | + log(2)
| | | | | + accessLogNumber(1)
| | | | | + accessLogTable(2)
| | | | | + networkLogNumber(3)
| | | | | + networkLogTable(4)
| | | | | + eventLogNumber(5)
| | | | | + eventLogTable(6)
| | | | | + errorLogNumber(7)
| | | | | + errorLogTable(8)
| | | | | + operationLogNumber(9)
| | | | | + operationLogTable(10)
```

### 3.2.2.1. Common information

I-PRO-REC-MIB (iproRecCommon)

```
+ ipro(57501)
| + recorder(200)
| | + recInfo(1)
| | | + iproRecCommon(2)
| | | | + userAccessCount(1)
| | | | + alarmSumNum(2)
```

#### userAccessCount

<b>objectName</b>	userAccessCount
<b>object id</b>	.1.3.6.1.4.1.57501.200.1.2.1
<b>SYNTAX RANGE</b>	INTEGER
<b>DESCRIPTION</b>	The number of clients that accesses the device via network. (0 - 99)

#### alarmSumNum

<b>objectName</b>	alarmSumNum
<b>object id</b>	.1.3.6.1.4.1.57501.200.1.2.2
<b>SYNTAX RANGE</b>	INTEGER
<b>DESCRIPTION</b>	The number of alarms from device boot. (0 - 4294967295) When exceed maximum value, count from 0 again.

### 3.2.2.2. HDD information

Information about the installed HDD. The assignment of HDD numbers is as follows, No.25 to No.32 are missing numbers.

#### HDD No. (1 - 24)

HDD No.	Position	HDD No.	Position	HDD No.	Position
1	MAIN-1	9	EXT2-1	17	EXT4-1
2	MAIN-2	10	EXT2-2	18	EXT4-2
3	MAIN-3	11	EXT2-3	19	EXT4-3
4	MAIN-4	12	EXT2-4	20	EXT4-4
5	EXT1-1	13	EXT3-1	21	EXT5-1
6	EXT1-2	14	EXT3-2	22	EXT5-2
7	EXT1-3	15	EXT3-3	23	EXT5-3
8	EXT1-4	16	EXT3-4	24	EXT5-4

#### HDD No. (33 - 62)

HDD No.	Position	HDD No.	Position	HDD No.	Position
33	MAIN-5	43	EXT2-5	53	EXT4-5
34	MAIN-6	44	EXT2-6	54	EXT4-6
35	MAIN-7	45	EXT2-7	55	EXT4-7
36	MAIN-8	46	EXT2-8	56	EXT4-8
37	MAIN-9	47	EXT2-9	57	EXT4-9
38	EXT1-5	48	EXT3-5	58	EXT5-5
39	EXT1-6	49	EXT3-6	59	EXT5-6
40	EXT1-7	50	EXT3-7	60	EXT5-7
41	EXT1-8	51	EXT3-8	61	EXT5-8
42	EXT1-9	52	EXT3-9	62	EXT5-9

### 1) HDD Capacity

I-PRO-REC-MIB(hddSize)

```

+ ipro(57501)
| + recorder(200)
| | + recInfo(1)
| | | + hddInfo(13)
| | | | + hddSize(1)
| | | | | + hddSize01(1)
| | | | | +
| | | | | :
| | | | | + hddSize62(62)
| | | | + hddSizeInt(11)
| | | | | + hddSizeInt01(1)
| | | | | +
| | | | | :
| | | | | + hddSizeInt62(62)
    
```

#### hddSizenn

<b>objectName</b>	hddSizenn ( <i>nn</i> is HDD No.)
<b>object id</b>	.1.3.6.1.4.1.57501.200.1.13.1.* (* is HDD No.)
<b>SYNTAX RANGE</b>	DisplayString
<b>DESCRIPTION</b>	HDD capacity (GB) or link status

#### hddSizeIntnn

<b>objectName</b>	hddSizeIntnn ( <i>nn</i> is HDD No.)
<b>object id</b>	.1.3.6.1.4.1.57501.200.1.13.11.* (* is HDD No.)
<b>SYNTAX RANGE</b>	INTEGER
<b>DESCRIPTION</b>	HDD capacity (GB) or link status

- DESCRIPTION is output as follows according to the status of HDD.

HDD status	hddSizenn	hddSizeIntnn
Normal	2000 GB	2000
Remove	REMOVE	99999993
Add / No disk	- GB	99999999
Playback only	USED	22222222
Error	ERROR	99999994

## 2) HDD hour meter

I-PRO-REC-MIB(hourMeter)

```

+ ipro(57501)
| + recorder(200)
| | + recInfo(1)
| | | + hddInfo(13)
| | | | + hourMeter(2)
| | | | | + hourMeter01(1)
| | | | | +      :
| | | | | + hourMeter62(62)
| | | | + hourMeterInt(12)
| | | | + hourMeterInt01(1)
| | | | +      :
| | | | + hourMeterInt62(62)
    
```

### hourMeter*nn*

<b>objectName</b>	hourMeter <i>nn</i> ( <i>nn</i> is HDD No.)
<b>object id</b>	.1.3.6.1.4.1.57501.200.1.13.2.* (* is HDD No.)
<b>SYNTAX RANGE</b>	DisplayString
<b>DESCRIPTION</b>	The operating time (hour) of the HDD.

### hourMeterInt*nn*

<b>objectName</b>	hourMeterInt <i>nn</i> ( <i>nn</i> is HDD No.)
<b>object id</b>	.1.3.6.1.4.1.57501.200.1.13.12.* (* is HDD No.)
<b>SYNTAX RANGE</b>	INTEGER
<b>DESCRIPTION</b>	The operating time (hour) of the HDD.

- DESCRIPTION is output as follows according to the status of HDD.

HDD status	hourMeter <i>nn</i>	hourMeterInt <i>nn</i>
Normal	125 h	125
Other	- h	99999999

**HDD G-List**

I-PRO-REC-MIB(hddGList)

```
+ ipro(57501)
| + recorder(200)
| | + recInfo(1)
| | | + hddInfo(13)
| | | | + hddGList(3)
| | | | | + hddGList01(1)
| | | | | +      :
| | | | | + hddGList62(62)
| | | | + hddGListInt(13)
| | | | | + hddGListInt01(1)
| | | | | +      :
| | | | | + hddGListInt62(62)
```

**hddGListnn**

<b>objectName</b>	hddGListnn (nn is HDD No.)
<b>object id</b>	.1.3.6.1.4.1.57501.200.1.13.3.* (* is HDD No.)
<b>SYNTAX RANGE</b>	DisplayString
<b>DESCRIPTION</b>	The number of G-List (Hex:0000-FFFF)

**hddGListIntnn**

<b>objectName</b>	hddGListIntnn (nn is HDD No.)
<b>object id</b>	.1.3.6.1.4.1.57501.200.1.13.13.* (* is HDD No.)
<b>SYNTAX RANGE</b>	INTEGER
<b>DESCRIPTION</b>	The number of G-List (Decimal)

- DESCRIPTION is output as follows according to the status of HDD.

HDD status	hddGListnn	hddGListIntnn
Normal	001A	26
Other	-	99999999

**HDD S.M.A.R.T.**

I-PRO-REC-MIB(hddSmart)

```
+ ipro(57501)
| + recorder(200)
| | + recInfo(1)
| | | + hddInfo(13)
| | | | + hddSmart(4)
| | | | | + hddSmart01(1)
| | | | | +      :
| | | | | + hddSmart62(62)
| | | | + hddSmartInt(14)
| | | | | + hddSmartInt01(1)
| | | | | +      :
| | | | | + hddSmartInt62(62)
```

**hddSmartnn**

<b>objectName</b>	hddSmartnn (nn is HDD No.)
<b>object id</b>	.1.3.6.1.4.1.57501.200.1.13.4.* (* is HDD No.)
<b>SYNTAX RANGE</b>	DisplayString
<b>DESCRIPTION</b>	HDD SMART warning

**hddSmartIntnn**

<b>objectName</b>	hddSmartIntnn (nn is HDD No.)
<b>object id</b>	.1.3.6.1.4.1.57501.200.1.13.14.* (* is HDD No.)
<b>SYNTAX RANGE</b>	INTEGER
<b>DESCRIPTION</b>	HDD SMART warning

- DESCRIPTION is output as follows according to the status of HDD.

HDD status	hddSmartnn	hddSmartIntnn
<b>SMART warning</b>	1	1
<b>Not warning</b>	0	0
<b>Other</b>	-	99999999

**HDD operation mode**

I-PRO-REC-MIB(hddMode)

```
+ ipro(57501)
| + recorder(200)
| | + recInfo(1)
| | | + hddInfo(13)
| | | | + hddMode(5)
| | | | | + hddMode01(1)
| | | | | +
| | | | | :
| | | | | + hddMode62(62)
| | | | + hddModeInt(15)
| | | | | + hddModeInt01(1)
| | | | | +
| | | | | :
| | | | | + hddModeInt62(62)
```

**hddModenn**

<b>objectName</b>	hddModenn ( <i>nn</i> is HDD No.)
<b>object id</b>	.1.3.6.1.4.1.57501.200.1.13.5.* (* is HDD No.)
<b>SYNTAX RANGE</b>	DisplayString
<b>DESCRIPTION</b>	HDD operation mode

**hddModeIntnn**

<b>objectName</b>	hddModeIntnn ( <i>nn</i> is HDD No.)
<b>object id</b>	.1.3.6.1.4.1.57501.200.1.13.15.* (* is HDD No.)
<b>SYNTAX RANGE</b>	INTEGER
<b>DESCRIPTION</b>	HDD operation mode

- DESCRIPTION is output as follows according to the status of HDD.

HDD status	hddModenn	hddModeIntnn
Single / RAID1 (normal)	0	0
RAID5 / RAID6 (normal)	1	1
RAID5 / RAID6 (down)	2	2
RAID1 (down)	-	99999999
Other	-	99999999

## HDD recording range

I-PRO-REC-MIB(hddRecRange)

```

+ ipro(57501)
| + recorder(200)
| | + recInfo(1)
| | | + hddInfo(13)
| | | | + hddRecRange(6)
| | | | | + hddRecRange01(1)
| | | | | + hddRecRangeOldest(1)
| | | | | + hddRecRangeLatest(2)
| | | | | +      :
| | | | | +      :
| | | | | +      :
| | | | | + hddRecRange62(62)
| | | | | + hddRecRangeOldest(1)
| | | | | + hddRecRangeLatest(2)
    
```

### hddRecRangeOldest

<b>objectName</b>	hddRecRangeOldest
<b>object id</b>	.1.3.6.1.4.1.57501.200.1.13.6.*.1 (* is HDD No.)
<b>SYNTAX RANGE</b>	DisplayString
<b>DESCRIPTION</b>	The first date and time of the oldest data in the HDD.

### hddRecRangeLatest

<b>objectName</b>	hddRecRangeLatest
<b>object id</b>	.1.3.6.1.4.1.57501.200.1.13.6.*.2 (* is HDD No.)
<b>SYNTAX RANGE</b>	DisplayString
<b>DESCRIPTION</b>	The first date and time of the latest data in the HDD.

- The date and time display format follows the settings of this unit.
- In RAID5/RAID6 mode, these are displayed on HDD1 of each unit, and other HDDs are displayed as “-”.
- If there is no recorded data in the HDD, “-” is displayed.

### 3.2.2.3. Camera connection status

I-PRO-REC-MIB(camSyncState)

```
+ ipro(57501)
| + recorder(200)
| | + recInfo(1)
| | | + camSyncState(15)
| | | | + camSyncState001(1)
| | | | +           :
| | | | + camSyncState128(128)
```

#### camSyncStatemmm

<b>objectName</b>	camSyncStatemmm (mmm is camera No.)
<b>object id</b>	.1.3.6.1.4.1.57501.200.1.15.* (* is camera No.)
<b>SYNTAX RANGE</b>	INTEGER
<b>DESCRIPTION</b>	Camera connection status (0: No connection, 1: Connection)

### 3.2.2.4. Temperature

I-PRO-REC-MIB(temperature)

```

+ ipro(57501)
| + recorder(200)
| | + recInfo(1)
| | | + temperature(16)
| | | | + recorderTemp(1)
| | | | + degreeCelsius(2)
| | | | + degC(1)
| | | | + degCTenTimes(2)
| | | | + degreeFahrenheit(3)
| | | | + degF(1)
| | | | + degFTenTimes(2)

```

#### recorderTemp

<b>objectName</b>	recorderTemp
<b>object id</b>	.1.3.6.1.4.1.57501.200.1.16.1
<b>SYNTAX RANGE</b>	DisplayString
<b>DESCRIPTION</b>	Temperature of the unit. (Ex.: 38.4 degrees centigrade)

#### degC

<b>objectName</b>	degC
<b>object id</b>	.1.3.6.1.4.1.57501.200.1.16.2.1
<b>SYNTAX RANGE</b>	INTEGER
<b>DESCRIPTION</b>	Temperature of the unit. (Degrees centigrade, rounded to whole number)

#### degCTenTimes

<b>objectName</b>	degCTenTimes
<b>object id</b>	.1.3.6.1.4.1.57501.200.1.16.2.2
<b>SYNTAX RANGE</b>	INTEGER
<b>DESCRIPTION</b>	Temperature of the unit. (Degrees centigrade, rounded to the first place and multiplied by 10)

#### degF

<b>objectName</b>	degF
<b>object id</b>	.1.3.6.1.4.1.57501.200.1.16.3.1
<b>SYNTAX RANGE</b>	INTEGER
<b>DESCRIPTION</b>	Temperature of the unit. (Degrees Fahrenheit, rounded to whole number)

**degFTenTimes**

<b>objectName</b>	degFTenTimes
<b>object id</b>	.1.3.6.1.4.1.57501.200.1.16.3.2
<b>SYNTAX RANGE</b>	INTEGER
<b>DESCRIPTION</b>	Temperature of the unit. (Degrees Fahrenheit, rounded to the first place and multiplied by 10)

### 3.2.2.5. Recording range

I-PRO-REC-MIB(dataInfo)

```
+ ipro(57501)
| + recorder(200)
| | + recInfo(1)
| | | + dataInfo(19)
| | | | + oldestData(1)
| | | | + latestData(2)
```

#### oldestData

<b>objectName</b>	oldestData
<b>object id</b>	.1.3.6.1.4.1.57501.200.1.19.1
<b>SYNTAX RANGE</b>	DisplayString
<b>DESCRIPTION</b>	The first date and time of the oldest data in the system.

#### latestData

<b>objectName</b>	latestData
<b>object id</b>	.1.3.6.1.4.1.57501.200.1.19.2
<b>SYNTAX RANGE</b>	DisplayString
<b>DESCRIPTION</b>	The first date and time of the latest data in the system.

- The date and time display format follows the settings of this unit.
- If there is no recorded data in all HDDs, "-" is displayed.

### 3.2.2.6. Access log

I-PRO-REC-MIB(accessLogNumber/accessLogTable)

```
+ ipro(57501)
| + recorder(200)
| | + log(2)
| | | + accessLogNumber(1)
| | | + accessLogTable(2)
| | | | + accessLogEntry(1)
| | | | | + accessLogIndex(1)
| | | | | + accessLogDayTime(2)
| | | | | + accessLogType(3)
```

#### accessLogNumber

<b>objectName</b>	accessLogNumber
<b>object id</b>	.1.3.6.1.4.1.57501.200.2.1
<b>SYNTAX RANGE</b>	INTEGER
<b>DESCRIPTION</b>	Number of logs

#### accessLogTable

One table row is returned for each log. To obtain the log information, attach the Index to all the columns in the table.

#### accessLogIndex

<b>objectName</b>	accessLogIndex
<b>object id</b>	.1.3.6.1.4.1.57501.200.2.2.1.1
<b>SYNTAX RANGE</b>	INTEGER (1 - 500)
<b>DESCRIPTION</b>	Log number

#### accessLogDayTime

<b>objectName</b>	accessLogDayTime
<b>object id</b>	.1.3.6.1.4.1.57501.200.2.2.1.2
<b>SYNTAX RANGE</b>	DateAndTime (INTEGER if there is no log)
<b>DESCRIPTION</b>	Date and time of the log (0 if there is no log)

#### accessLogType

<b>objectName</b>	accessLogType
<b>object id</b>	.1.3.6.1.4.1.57501.200.2.2.1.3
<b>SYNTAX RANGE</b>	DisplayString (INTEGER if there is no log)
<b>DESCRIPTION</b>	Contents of the log (Output as 0 for no log.) Format: [Access type number]-[User name]

## SNMP MIB manual for i-PRO Recorder

- Access type

<b>No.</b>	<b>Description</b>
001	Login
002	Logout

### 3.2.2.7. Network log

I-PRO-REC-MIB(networkLogNumber/networkLogTable)

```
+ ipro(57501)
| + recorder(200)
| | + log(2)
| | | + networkLogNumber(3)
| | | + networkLogTable(4)
| | | | + networkLogEntry(1)
| | | | | + networkLogIndex(1)
| | | | | + networkLogDayTime(2)
| | | | | + networkLogType(3)
```

#### networkLogNumber

<b>objectName</b>	networkLogNumber
<b>object id</b>	.1.3.6.1.4.1.57501.200.2.3
<b>SYNTAX RANGE</b>	INTEGER
<b>DESCRIPTION</b>	Number of logs

#### networkLogTable

One table row is returned for each log. To obtain the log information, attach the Index to all the columns in the table.

#### networkLogIndex

<b>objectName</b>	networkLogIndex
<b>object id</b>	.1.3.6.1.4.1.57501.200.2.4.1.1
<b>SYNTAX RANGE</b>	INTEGER (1 - 100)
<b>DESCRIPTION</b>	Log number

#### networkLogDayTime

<b>objectName</b>	networkLogDayTime
<b>object id</b>	.1.3.6.1.4.1.57501.200.2.4.1.2
<b>SYNTAX RANGE</b>	DateAndTime (INTEGER if there is no log)
<b>DESCRIPTION</b>	Date and time of the log (0 if there is no log)

#### networkLogType

<b>objectName</b>	networkLogType
<b>object id</b>	.1.3.6.1.4.1.57501.200.2.4.1.3
<b>SYNTAX RANGE</b>	DisplayString (INTEGER if there is no log)
<b>DESCRIPTION</b>	Contents of the log (Output as 0 for no log.) Format: [Network log type number]

## SNMP MIB manual for i-PRO Recorder

- Network log type

No.	Description
00-00-00	E-mail transmission complete
00-01-01	POP3 authentication error
00-02-57	SMTP authentication error
00-02-06	MAIL FROM command error
00-02-07	RCPT TO command error
00-04-03	Failed to find POP3 server
00-04-05	Failed to find SMTP server
00-05-02	Failed to resolve POP3 server address from DNS
00-05-04	Failed to resolve SMTP server address from DNS
00-05-08	Other errors for SMTP
02-04-22	No response from DDNS server
02-04-59	Failed to resolve DDNS server address from DNS
02-04-60	Duplicate DDNS hostname
02-04-61	Failed to resolve Viewnetcam server address from DNS
02-04-62	No response from Viewnetcam server
02-05-25	Other errors for DDNS
02-05-64	Other errors for Viewnetcam
03-00-26	Synchronization with the NTP server complete
03-05-27	Failed to resolve NTP server address from DNS
03-05-30	Synchronization with the NTP server failed (Time is not synchronized.)
03-05-31	Failed to adjust the time
03-05-32	Failed to find NTP server.
03-05-33	Other errors for NTP
04-05-35	Password error for SNMP user name
04-05-37	Other errors for SNMP
06-04-45	Password error for HTTP user name
06-04-46	HTTP download failure
06-04-47	HTTP request invalid
06-04-51	Other errors for HTTP
10-00-66	IEEE802.1x authentication successful
10-00-67	IEEE802.1x authentication error
10-00-68	IEEE802.1x authentication not used
10-00-69	Other errors for IEEE802.1x

### 3.2.2.8. Event log

I-PRO-REC-MIB(eventLogNumber/eventLogTable)

```
+ ipro(57501)
| + recorder(200)
| | + log(2)
| | | + eventLogNumber(5)
| | | + eventLogTable(6)
| | | | + eventLogEntry(1)
| | | | | + eventLogIndex(1)
| | | | | + eventLogDayTime(2)
| | | | | + eventLogType(3)
```

#### eventLogNumber

<b>objectName</b>	eventLogNumber
<b>object id</b>	.1.3.6.1.4.1.57501.200.2.5
<b>SYNTAX RANGE</b>	INTEGER
<b>DESCRIPTION</b>	Number of logs

#### eventLogTable

One table row is returned for each log. To obtain the log information, attach the Index to all the columns in the table.

#### eventLogIndex

<b>objectName</b>	eventLogIndex
<b>object id</b>	.1.3.6.1.4.1.57501.200.2.6.1.1
<b>SYNTAX RANGE</b>	INTEGER (1 - 1000)
<b>DESCRIPTION</b>	Log number

114	Recording error detection (related to WCK)	000 (Fixed)	Camera No.
116	Rollback startup	000 (Fixed)	0 (Fixed)
201	NW link error	000 (Fixed)	Port No.
203	Network camera error detection	000 (Fixed)	Camera No.
204	Network camera error recovery	000 (Fixed)	Camera No.
205	Camera SD - Card error	000 (Fixed)	Camera No.
206	Camera SD - Write start failure	000 (Fixed)	Camera No.
207	Camera SD - Write end failure	000 (Fixed)	Camera No.
208	Camera SD - List failure	000 (Fixed)	Camera No.
209	Camera SD - Image acquisition failure	000 (Fixed)	Camera No.
210	Camera SD - Image delete failure	000 (Fixed)	Camera No.
211	Video loss	000 (Fixed)	Camera No.
212	Video loss recovery	000 (Fixed)	Camera No.
213	Network camera error detection (audio)	000 (Fixed)	Camera No.
214	Network camera error recovery (audio)	000 (Fixed)	Camera No.
215	Failed to resolve an address of TCP alarm protocol from DNS	000 (Fixed)	0 (Fixed)
216	No response from a notified address of TCP alarm protocol	000 (Fixed)	0 (Fixed)
217	Undefined error of TCP alarm protocol	000 (Fixed)	0 (Fixed)
218	When time is not adjusted due to the time difference of 1000 second or more from the NTP server	000 (Fixed)	0 (Fixed)
222	Camera SD - Accumulated recording time warning	000 (Fixed)	Camera No.
223	Camera SD - Overwrite warning	000 (Fixed)	Camera No.
224	Camera SD - Access error	000 (Fixed)	Camera No.
227	HDD slow response	Unit No.	HDD No.
229	Network camera error detection (video)	000 (Fixed)	Camera No.
230	Network camera error recovery (video)	000 (Fixed)	Camera No.
231	Camera hardware error	000 (Fixed)	Camera No.
232	Wiper rubber replacement notice	000 (Fixed)	Camera No.

SNMP MIB manual for i-PRO Recorder

No.	Description	Unit	Option
234	NAS backup error	000 (Fixed)	NAS Storage No.
235	NAS backup full	000 (Fixed)	NAS Storage No.
236	Failover (Operation)	000 (Fixed)	0 (Fixed)
237	Failover (Alternative operation)	000 (Fixed)	Recorder No.
240	Network camera error detection (video)	000 (Fixed)	Camera No.
241	Network camera error recovery (live)	000 (Fixed)	Camera No.
242	NAS backup interrupted	000 (Fixed)	NAS Storage No.
243	Camera SD Recording failure	000 (Fixed)	Camera No.
244	Changed angle of the camera	000 (Fixed)	Camera No.
245	Recover angle of the camera	000 (Fixed)	Camera No.
246	The trial period for the extension software of the camera has expired	000 (Fixed)	Camera No.
247	PoE total power supply warning	000 (Fixed)	0 (Fixed)
248	PoE power supply stopped	000 (Fixed)	0 (Fixed)
249	Failed to resolve an address of HTTP alarm protocol from DNS	000 (Fixed)	0 (Fixed)
250	No response from a notified address of HTTP alarm protocol	000 (Fixed)	0 (Fixed)
251	HTTP alarm authentication error	000 (Fixed)	0 (Fixed)
252	HTTP alarm certificate validation error	000 (Fixed)	0 (Fixed)
253	HTTP alarm certificate validation warning	000 (Fixed)	0 (Fixed)
254	Undefined error of HTTP alarm protocol	000 (Fixed)	0 (Fixed)
256	Camera SD - Full	000 (Fixed)	Camera No.
257	Camera SD - Undetected	000 (Fixed)	Camera No.
258	Camera SD - Remaining capacity warning	000 (Fixed)	Camera No.
259	Starting remote monitoring	000 (Fixed)	Camera No.
260	Suspending remote monitoring	000 (Fixed)	Camera No.
261	Remote monitoring response error	000 (Fixed)	0 (Fixed)
262	Network camera error detection (video stream for remote monitoring)	000 (Fixed)	Camera No.
263	Network camera error recovery (video stream for remote monitoring)	000 (Fixed)	Camera No.
269	Radar error	000 (Fixed)	Camera No.
306	Setup error detection	000 (Fixed)	0 (Fixed)

▪ Unit number

No.	Description
001	Main unit
101	Extension unit 1
102	Extension unit 2

SNMP MIB manual for i-PRO Recorder

No.	Description
103	Extension unit 3
104	Extension unit 4
105	Extension unit 5
202	Copy drive (DVD)
203	Copy drive (USB)

▪ Option number

Option	No.	Description
HDD No.	1-62	See chapter エラー! 参照元が見つかりません。
Camera number	1-128	Camera 1 - 128
Fan No.	1-4	Fan 1 - 4
Port No.	1	[Camera/PC] port
	2	[PC] port
	3	Maintenance port
NAS Storage No.	1-2	NAS Storage 1 - 2
Recorder No.	1-5	Recorder 1 - 5

### 3.2.2.10. Operation Log

I-PRO-REC-MIB(operationLogNumber/operationLogTable)

```
+ ipro(57501)
| + recorder(200)
