

# Summary of Vulnerability Assessment Report

## Target Products:

i-PRO Ambarella CV Series Cameras

Reference Products: WV-X45501-F1L  
WV-X45701-F1L

## Report Date:

13 February 2026

## Assessment Conducted by:

FUJI SOFT INCORPORATED

---

## Scope of Testing:

The following tests were conducted to assess the security vulnerabilities of the target products:

1. **Network Analysis:**
    - Port scan.
    - Packet capture.
    - Network load test.
  2. **Vulnerability Scan:**
    - Network vulnerability scan.
    - Identification of known vulnerabilities based on public databases and sources.
  3. **Web Vulnerability Testing:**
    - Authentication failure.
    - Service outages due to security weaknesses.
    - Lack of secure communication encryption.
    - Web vulnerability scan.
  4. **Fuzzing Testing:**
    - Sending malicious network packets.
- 

## Test Results:

Two vulnerabilities were identified during the vulnerability assessment. However, the CVSS scores for these vulnerabilities are 7.1 (High) and 4.0 (Medium). Additionally, both vulnerabilities have been confirmed as fixed.
