New functions and revisions (Software V4.30)

The recorder will be able to provide the following new functions by updating the software.
It also contains the latest information related to the Operating Instructions.

Details on the new functions and revisions	Reference pages
<p>Deletion of description Restrictions when using this product</p> <ul style="list-style-type: none"> After the date and time display of the camera is set from the recorder, the date and time display setting will become same for all camera numbers of the same camera. (Page 18) 	Page 20 of this flyer
<p>Changes of description Restrictions when using this product</p> <p>When registering a U series network camera</p> <ul style="list-style-type: none"> The supported camera firmware is V1.10 or later. The compression method "H.265(3)" cannot be selected. (If "H.265(3)" is selected in the software V4.20 or earlier of this recorder, the setting will be changed to "H.265(1)" after it is upgraded to V4.30.) It is not necessary to select the camera registration option. (If the camera registration option "(30IPS)" is selected in the software V4.20 or earlier of this recorder, the setting will be changed to "No option" after it is upgraded to V4.30. Also, restrictions on multi-screen display and sub-stream recording are not covered.) If the camera registration option "(30IPS)" is selected in the software V4.20 or earlier of this recorder, execute Synchronize the camera's settings with this unit (Page 70) after it is upgraded to V4.30. Smart coding (GOP control) settings cannot be used depending on the settings of the camera. 	Page 15 of this flyer
<p>Addition of description Restrictions when using this product</p> <p>When registering the network camera WV-S1552L, WV-S2252L, or WV-S2552L</p> <ul style="list-style-type: none"> When the compression method is MJPEG and the resolution is 7M (3072x2304), 5M (2560x1920), 5M (3072x1728), WQHD (2560x1440), 5M (1728x3072) or 4M (1440x2560), the maximum recording frame rate may be 1 ips depending on the settings of the camera. <p>When registering the network camera WV-S1572L, WV-S2272L, or WV-S2572L</p> <ul style="list-style-type: none"> If the recording frame rate is set to 30 ips/25 ips, the frame rate of multi-screen monitor display will drop to 15 ips/12.5 ips. When the resolution is 4KUHD (3840x2160) or 8M (2160x3840) and the compression mode is H.265 (Smart coding Off), the image quality of 25 ips and more is set; for XF and H.264, the image quality of 10 ips and more is set; for XF, the image quality of 25 ips and more is set; for SF, the code rate exceeds 12 Mbps, so the SD backup cannot be run. In addition, even if these settings are changed in the SD backup, the bit rate will not be changed and thus the recording will not be done properly. If 25 fps or 30 fps is set for stream 1 on the camera side, the maximum recording frame rate for stream 3 and stream 4 will be 15 ips. If the resolution of stream 4 is HD (1280x720), the maximum recording frame rate will be 15 ips. When the compression method is MJPEG and the resolution is 4KUHD (3840x2160), WQHD (2560x1440), 8M (2160x3840) or 4M (1440x2560), the maximum recording frame rate may be 1 ips depending on the settings of the camera. <p>When registering the network camera WV-S4151, WV-S4551L, WV-X4172, WV-X4173, or WV-X4573L</p> <ul style="list-style-type: none"> For WV-X4172, WV-X4173 and WV-X4573 L, if the image capture mode is "<Wall> Single PTZ", 2560x1920 cannot be set for the resolution. For WV-X4172, WV-X4173, and WV-X4573L, when the compression method is MJPEG and the resolution is 9M (2992x2992) or 5M (2192x2192), the maximum recording frame rate may be 1 ips or 2 ips depending on the settings of the camera. Changing the Super dynamic and Wide dynamic range settings may cause temporary camera communication errors. 	Page 6

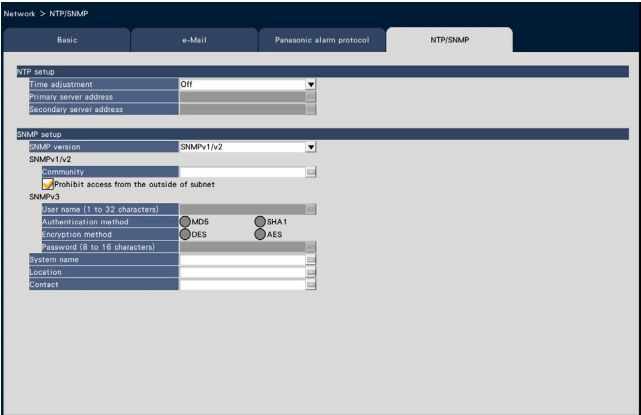

Details on the new functions and revisions	Reference pages
<p>Addition of description Restrictions when using this product When registering the network camera WV-S8531N or WV-X8571N</p> <ul style="list-style-type: none"> ● Set the following values for each camera number of the same camera. <ul style="list-style-type: none"> · Camera authentication · Compression method, resolution, frame rate, and image quality of camera images · Recording settings (audio encoding format) <ul style="list-style-type: none"> * For WV-X8571N only · SD backup settings, smart coding (GOP control) settings · Security setting between this recorder and the camera (connection, data encryption settings) ● MJPEG cannot be selected as the image compression method. ● The WV-X8571N can take SD backup only when the image compression method is H.265(1) and the resolution is WQHD (2560x1440) or FHD (1920x1080). ● Auto-IP address assignment is only available for S8531-1 or X8571-1. (☞ Page 13) ● The settings may not be reflected if you set and send values for multiple camera numbers of the same camera. If an error occurs, select a camera number that the error occurs and send the settings again. (☞ Page 17) 	Page 6
<p>Changes to the screen Addition of setting items ■Other setup</p>  <p>[Extend an event recording during "MotionAlarm" of ONVIF event] When checked, the event recording that starts with "MotionAlarm" in the ONVIF event notified by the camera will be extended for the duration set in the event recording duration (☞ Page 36) unless an end notification is received from the camera.</p> <p>Note</p> <ul style="list-style-type: none"> · Please be noted that if the communication is temporarily interrupted due to the network environment, the recording will continue until the alarm operation is canceled unless an end notification is received. · In camera site alarm advanced settings (☞ Page 53), when one camera is set to "Recording Camera" for multiple cameras, it may not work properly. 	Page 45
<p>Error correction [Status] Incorrect <u>Added</u> : HDD cannot be used until it is formatted Correct <u>Addition</u> : HDD cannot be used until it is formatted</p>	Page 64

Addition of description

Description has been added to “Select a camera which performs AI privacy guard recording [AI privacy guard recording camera]”.

Click the [Setup >] button of [AI privacy guard recording camera] on the [Camera registration] tab to display the following screen.

Page 16

[Recording camera]

For the registered cameras, select a camera to record the AI privacy guard image.

Only cameras that support AI privacy guard recording with the compression method set to H.265 (1) or H.264 (1) can be selected as a recording camera.

[Select]

Select a camera to operate with useful functions.

[Assigned as starting camera no.]

Specify the starting camera no. when assigning camera no. in order. Click the [Execute] button to assign the unused camera no. to the selected cameras in ascending order from the specified camera no.

Note:

●The camera no. selected on the recording camera changes to the AI privacy guard recording display on all settings screens of this recorder, as shown in the following screen.

●Select the camera and then click the [Clear] button to clear the assigned camera no.

Description has been added to ■ Camera Selection.

Note:

●The cameras that perform AI privacy guard are set to both streams.

Page 21

Description has been added to ■ Camera Selection.

Note:

●The cameras that perform AI privacy guard are set to both streams.

Page 22

Description has been added to [Display]

Ctrl screen: Displays in the Ctrl screen.

Wide view: Displays in the Wide view.

Default: Ctrl screen

Page 40

Description has been added to [Main monitor action]

[Display camera]

It is displayed when [On] or [On (ACK/RESET)] is selected in [Main monitor action]. When using AI privacy guard recording, select whether to display the camera (Recording camera) without privacy guard or the camera (AI privacy guard recording camera) with privacy guard.

Default: Recording camera

Details on the new functions and revisions

Reference
pages

Change has been made to [Advanced setup] tab.
The following [Extension software alarm] is added.

Page 43

Addition of description

Description has been added to [Extension software alarm].

Set the extension software alarm name and message ID.

Page 43

To use the extension software alarms 1 to 4, the extension software WV-XAE200W must be installed on the camera and settings must be completed.

[Name]

Enter the names of the extension software alarms 1 to 8 from the software keyboard (up to 16 characters).

Note:

- The alarm log, event information display, event type (page 133), and REC event (page 171) are displayed with the set name.
- Kanji (Chinese characters) can be entered from the PC web browser. Characters that are not in the installed fonts cannot be displayed.
- If the setting is saved in blank, it will return to the default name.

[Message ID]

Select alarm message ID to be received as extension software alarms 5 to 8 in decimal number (000 to 255).

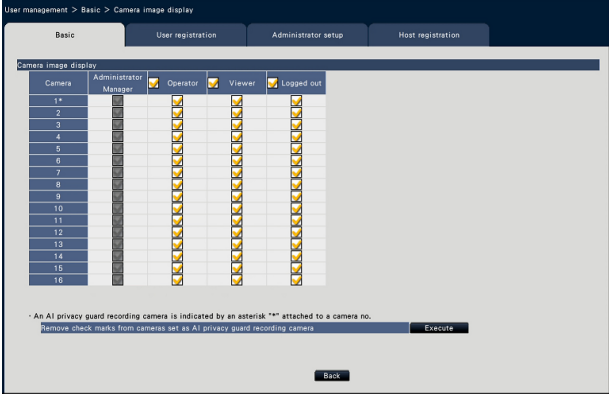

Note:

- 50, 51, 52, and 56 cannot be set.
- When the message ID is set, the set alarm name is displayed in the event type (page 133) and REC event (page 171).

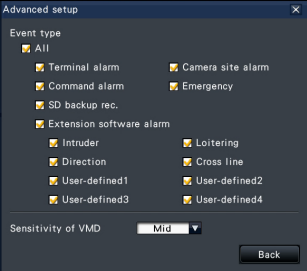

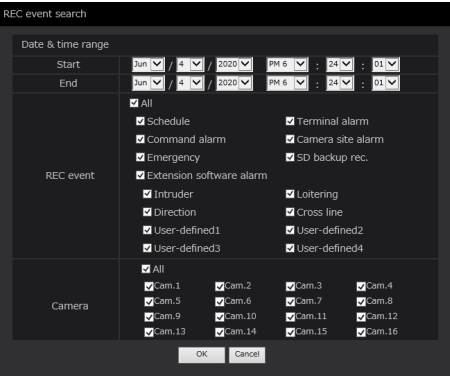

Description has been added to [SNMP version]

Select the SNMP version to be used. By using SNMPv3, communication data can be encrypted and communication security can be improved.

New functions and revisions (Software V3.10)

The recorder will be able to provide the following new functions by updating the software.
It also contains the latest information related to the Operating Instructions.

Details on the new functions and revisions	Reference pages
<p>Description has been changed. Description related to the “Go to last” specification is changed. ~The starting point is around 10 seconds before the date & time of the latest recorded images.~ → Changed “around 10 seconds” to “around 30 seconds”.</p>	Page 5, 128, 131, 160, 161, 162, 168, 169
<p>Description has been added. The following note is added to “Change the registered information [Registered information]” - “[Option]”. Note:</p> <ul style="list-style-type: none"> The method of installation will be set to the initial values of each mode if the options of the fisheye camera are changed. Please refer to “readme.txt” in the CD-ROM provided with this unit for the initial values of each mode. 	Page 15
<p>Description has been added. The following note is added to “Set up VMD alarm for individual cameras [VMD alarm (Advanced individual camera setup)]”. Note:</p> <ul style="list-style-type: none"> The live image of the sub-monitor may not be displayed temporarily depending on the setting of the image capture size of the recorded video. 	Page 7 of this flyer
<p>Description has been added. The following important is added to “Recording setup tab [Recording setup]” - “[Panasonic alarm protocol]”. Important:</p> <ul style="list-style-type: none"> If the setting in any one of Schedule 1 to 16 is to notify an Panasonic alarm protocol, notification about camera site alarm inputs (Page 42) will be made even for cameras to which have been allocated the schedules in which Panasonic alarm protocol has not been set. 	Page 35
<p>Description has been added. The following description is added to “Configure the settings relating to the mail notification [e-Mail]” - “[Authentic method - User name]”. ~alphanumeric characters excluding [“], [&], [:], [;], [¥]~</p> <p>The following description is added to “Configure the settings relating to the mail notification [e-Mail]” - “[Authentic method - Password]”. ~alphanumeric characters excluding [“], [&]~</p>	Page 54
<p>Description has been added and changed A setting item is added to “Configure the settings relating to NTP/SNMP synchronization [NTP/SNMP]” - “■ SNMP setup”.</p>  <p>The screenshot shows the 'NTP/SNMP' configuration screen. It has tabs for 'Basic', 'e-Mail', 'Panasonic alarm protocol', and 'NTP/SNMP'. Under 'NTP setup', there is a 'Time adjustment' dropdown set to 'Off', and fields for 'Primary server address' and 'Secondary server address'. Under 'SNMP setup', there is a 'SNMP version' dropdown set to 'SNMPv1v2', a 'SNMPv1v2' dropdown set to 'Community', and a 'SNMPv3' section with fields for 'User name (1 to 32 characters)', 'Authentication method' (radio buttons for MD5 and SHA1), 'Encryption method' (radio buttons for DES and AES), and a 'Password (8 to 16 characters)' field. There are also fields for 'System name', 'Location', and 'Contact'.</p>	Page 56

WJ-NX200K, WJ-NX200K/G New functions (Software V3.00)

The recorder will be able to provide the following new functions by updating the software.
It also contains the latest information related to the Operating Instructions.

Details on the new functions and revisions	Reference pages
<p>Restrictions has been added to section “When displaying live images from the camera” of “Restrictions when using this product”.</p> <ul style="list-style-type: none"> When a live image from a camera with a recording frame rate set to 30 ips (25 ips) is displayed on a monitor with 4K output, some subjects may not be displayed smoothly. 	Page 5
<p>New restrictions have been added to the restrictions on the network cameras WV-S8530N and WV-X8570N added to V2.30.</p> <ul style="list-style-type: none"> After the date and time display of the camera is set from the recorder, the date and time display setting will become same for all camera numbers of the same camera (☞ Page 18). 	Page 19 of this New functions (Software V2.30) flyer
<p>Restrictions has been added to section “Restrictions when using this product”.</p> <p>When registering the network cameras WV-S1570L, WV-S2270L and WV-S2570L</p> <ul style="list-style-type: none"> If the recording frame rate is set to 30 ips/25 ips, the multi-screen monitor display frame rate will drop to 15 ips/12.5 ips. When the resolution is 4KUHD (3840x2160) or 8 M (2160x3840) and the compression mode is H.265 (Smart coding Off), the image quality of 25 ips and more is set; for XF and H.264, the image quality of 10 ips and more is set; for XF, the image quality of 25 ips and more is set; for SF, the code rate exceeds 12 Mbps, so the SD backup cannot be run. In addition, even if these settings are changed in the SD backup, the code rate will not be changed and the video will not be recorded correctly. 	Page 5
<p>Description has been added in section [Compression] in “Change the registered information”.</p> <p>Note:</p> <ul style="list-style-type: none"> If “Do not use stream 2 of camera with each function of this recorder” is switched to ON, H.264(2) and H.265(2) are not used. (☞Page 5 of this New functions flyer) 	Page 15
<p>“Self return”, “Advanced individual camera setup” and “Schedule” are added to [Camera Setup] tab.</p> 	Page 17

The function to change the Self return function setting of camera is added.

Page 25

Set self return [Self return]

Select the self-return function for individual cameras and transfer it to the camera to change the camera settings.

[Self return]

After the manual operation is completed, once the time set by the "Self return time" is passed, any of the selected camera operation modes will be automatically returned.

Off: Do not perform self return.

Home position: Return to home position as soon as the set time elapses.

Auto track: Return to home position and begin auto-track (auto rear-ending) operation as soon as the set time elapses. After that, the operation of returning to home position and beginning auto-track (auto rear-ending) after a certain period of time is repeatedly executed.

Auto pan: Begin auto-pan operation as soon as the set time elapses.

Preset sequence: Sorting operation begins as soon as the set time elapses.

Patrol: Patrol operation begins as soon as the set time elapses.

[Self return time]

After the manual operation is completed, select the deadline time to return to the "Self return" setting from the following items.

10 s / 20 s / 30 s / 1 min / 2 min / 3 min / 5 min / 10 min / 20 min / 30 min / 60 min

■ Camera selection

Select the camera that transfers the self return setting. In the setting items, check the camera that transfers the selected content.

[Transmission] button

Transmit the setting of the "Self return" to the camera.

Once transmission is completed and the setting has been applied to the camera, "OK" will be displayed in the "Results" field.

If the display reads "Authentication error", etc., the camera connection or the setting may have failed.

[Back] button

Click the button after completing the settings. The screen returns to the [Camera setup] tab.

The function for setting the motion detection alarm of individual cameras is added.

Page 33

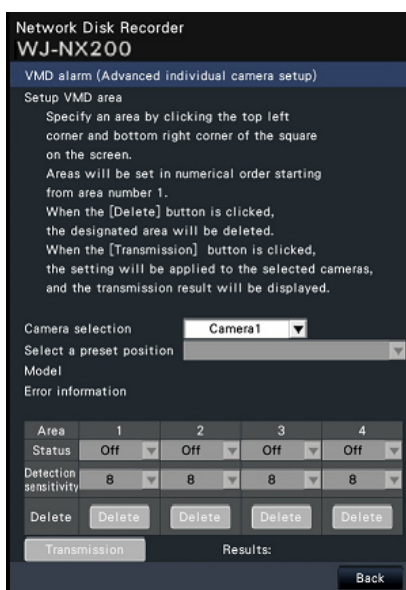

Set up VMD alarm for individual cameras [VMD alarm (Advanced individual camera setup)]

Select the motion detection area and detection sensitivity for each camera and transmit the information to the cameras to change the camera settings.

Clicking the "Advanced individual camera setup" [Setup >] button for "VMD alarm" on the [Camera setup] tab will display the setup page.

Note:

- This menu collects setting information from the selected camera and applies it on the setting screen.
- Only the fisheye network camera can set the "Fisheye" mode.

[Camera selection]

Select the camera for which you want to set the VMD alarm.

[Select a preset position]

If the selected camera is a camera with preset function, the preset position is selected.

[Model] [Error information]

See Page 18.

[Setup VMD area]

Click the top left corner and bottom right corner of the square on the screen, set the specified position as area 1, and display the area box. Area will be set in numerical order starting from area number 1. When the [Delete] button is clicked, the designated area will be deleted.

Note:

- Depending on the position of the area box, it is sometimes corrected slightly after the transfer settings.
- If the area box is too small, the area number will not be displayed correctly.

[Status]

When the motion detection area is set to Off, the status of the area will be switched to "Off".

[Detection sensitivity]

Set the sensitivity when moving within the area to be detected.

1 (low) ~ 15 (high)

[Transmission] button

Transmit the setting of the "VMD alarm" to the camera. Once transmission is completed and the setting has been applied to the camera, "OK" will be displayed in the "Results" field. When the Error information is not displayed as "-", it cannot be transferred to the camera.

[Back] button

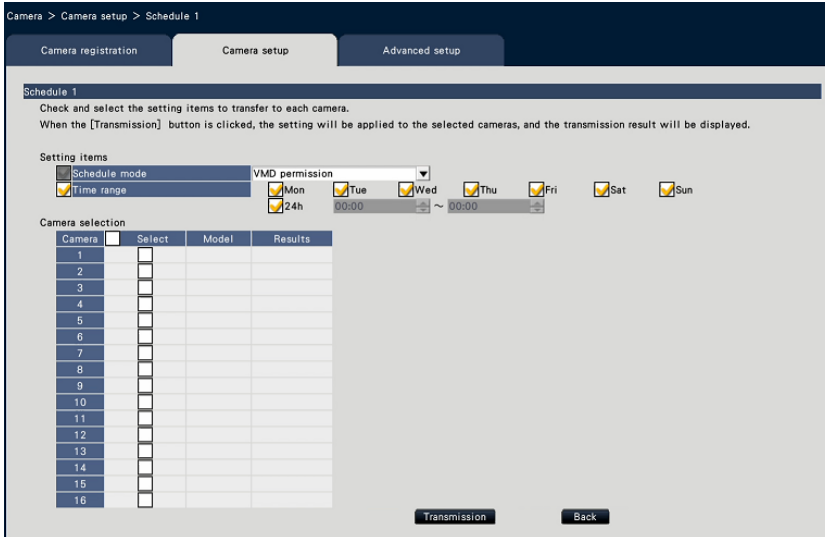

Click the button after completing the settings. The screen returns to the [Camera setup] tab.

The function of setting Schedule mode and Schedule range for individual cameras is added.

Page 33

Set schedule [Schedule 1 to Schedule 4]

Select the Schedule mode and Schedule range for individual cameras and transfer to the camera to change the camera settings.

[Schedule mode]

Select the schedule operation.

Off: Do not perform the schedule operation.

Alarm permission (Terminal alarm 1,2,3): Allow the terminal to input an alarm during the set range of the schedule.

Alarm permission (Terminal alarm 1): Allow Terminal 1 to input an alarm during the set range of the schedule.

Alarm permission (Terminal alarm 2): Allow Terminal 2 to input an alarm during the set range of the schedule.

Alarm permission (Terminal alarm 3): Allow Terminal 3 to input an alarm during the set range of the schedule.

VMD permission: Allow VMD during the set range of the schedule.

Preset position: 1 to Preset position: 8: After the time is set for the schedule, it moves to the position selected from the preset position registered in advance.

[Schedule]

Check the boxes for the day you want to set the schedule range. Set the start time and the end time when you want to specify a time period. Check "24 h" when the time period is not set.

■ Camera selection

Select the camera to which the setting of the "Schedule" is to be sent. Mark the checkbox of the camera to which the setup information is to be transmitted.

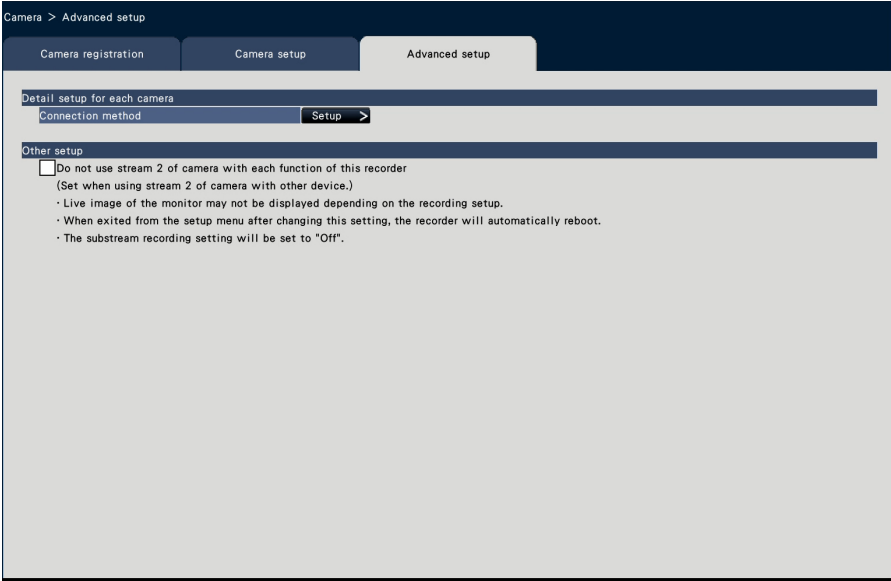

[Transmission] button

Transmit the setting of the "Schedule" to the camera.

Once transmission is completed and the setting has been applied to the camera, "OK" will be displayed in the "Results" field. If the display reads "Authentication error", etc., the camera connection or the setting may have failed.

[Back] button

Click the button after completing the settings. The screen returns to the [Camera setup] tab.

Emergency recording function has been added.

Page 43

[Emergency recording setup]

Configure the settings related to emergency recording

[Emergency audio recording]

If audio recording is not set for the camera, select whether to record audio only during emergency recording.

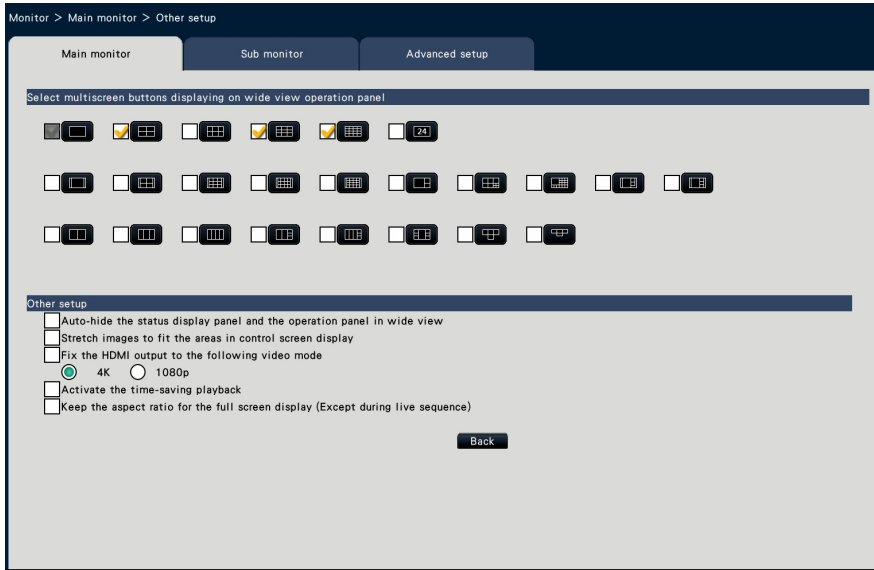

- Off : Does not record audio even during emergency recording.
- On : Records audio only during emergency recording. (G.726 format)
- On (AAC-LC) : Records audio only during emergency recording. (AAC-LC format)

Note:

- For cameras without audio recording, audio will not be recorded even when it is set to a value other than “Off”.
- Depending on the timing when emergency recording is started, audio may be recorded at the end of the previous recording data just before the emergency recording.

A function to keep the aspect ratio for the full screen display has been added.

Page 47

Keep the aspect ratio for the full screen display (Except during live sequence)

For “multiscreen select” of each wide view except for live sequence, select whether to change the aspect ratio of the displayed area if the aspect ratio of the image is different from the displayed area.

- Checked : Keeps aspect ratio (Does not change the ratio automatically)
- Not checked : Does not keep aspect ratio (Changes the ratio automatically)
- Default : Not checked

Dynamic DNS/ DDNS function has been added.

Page 51

The screenshot shows the 'Network > Basic' configuration page. It has tabs for 'Basic', 'e-Mail', 'Panasonic alarm protocol', and 'NTP/SNMP'. The 'Network Setup' section includes fields for IP address (192.168.000.250), Subnet mask (255.255.255.000), Default gateway (192.168.000.001), and Line speed (Auto). The 'DNS Setup' section shows DNS set to 'Off', Primary server address (000.000.000.000), Secondary server address (000.000.000.000), and Domain name (localdomain). The 'DDNS Setup' section shows DDNS set to 'Dynamic DNS update', Host name (NWDR), and Access interval (1 h). There is a note: '* When line speed has been changed, the system will restart automatically after saving setup data.' At the bottom, there is an 'Other setup' section with an 'Advanced' button.

■ DDNS Setup

Select the DDNS service to determine whether or not to use DDNS.

Off: Does not use the DDNS function.

Viewnetcam.com: Uses the "Viewnetcam.com" service.

Dynamic DNS update: Uses Dynamic DNS Update (RFC2136 compliant).

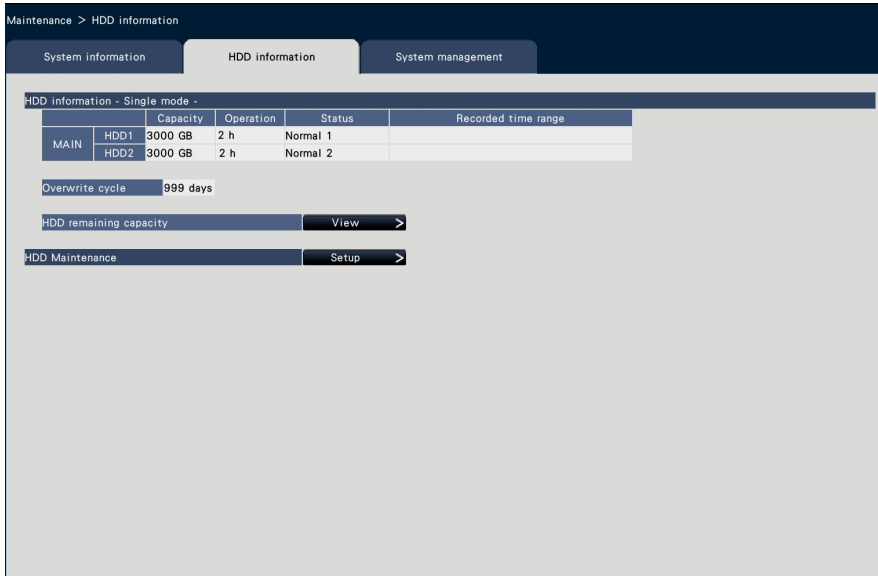

Default: Off

Important:

- If using a third party DDNS service, it is necessary to set the port forwarding for the router before use.
- About Dynamic DNS Update (RFC2136 compliant) Operation not using "Viewnetcam.com" service but using a third party DDNS service is not guaranteed. We are not responsible for any troubles or accidents on the circumstances where the camera is used arising out of such services. If using a third party DDNS service (not using the "Viewnetcam.com"), refer to the DDNS service provider for its configuration.

View HDD remaining capacity function has been added

Page 64

[HDD remaining capacity]

Displays remaining capacity of HDD. Also, the timing to notice when the capacity becomes low can be set. Click [View] button to display HDD remaining capacity.

Example above shows the screen for single mode.

[Capacity]

Displays the capacity of HDD.

[Remaining capacity]

Displays remaining capacity of HDD.

Note

- Remaining capacity displayed does not include capacity used to manage data. Therefore, the displayed HDD capacity is less than the actual amount.
- Remaining capacity will displayed as 0GB if the whole space of the HDD is used up by recording data.

[HDD Remaining capacity notice]

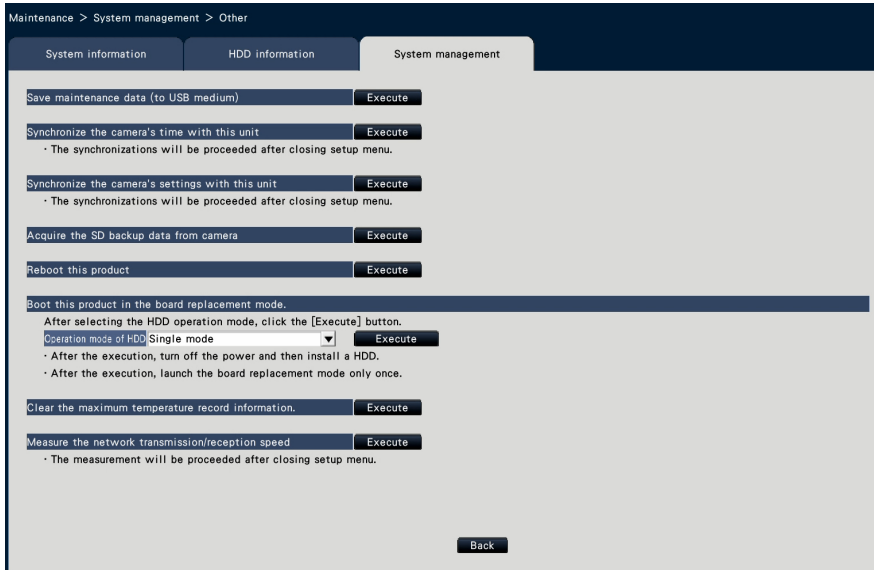

Set the notification timing for when the remaining capacity of HDD becomes low compared to the total capacity. There are E-mail notification and original notification.

Off : Does not perform HDD remaining capacity notice.

1%~10% : Notifies when remaining capacity becomes below the set value.

A function to measure the network transmission/reception speed has been added.

Page 70

[Measure the network transmission/reception speed]

Used to measure the amount of network traffic transmitted from the recorder. Click the [Execute] button and execute from the confirmation window displayed. After configuration is completed, measuring starts.

The result of measurement will be displayed after measurement finishes.

Note

- Measurement is made from about 8 seconds after setting is done and will continue measuring for 10 seconds.
- Status display area of operation screen will display "Measuring" while measuring.
- The result of measurement is the sum of all network ports.
- The result of measurement is only for reference. It may differ depending on the network environment.

New setting items are added to the lists of the setting items as new functions have been added. REC & event>Advanced setup

Notices

- The recording settings will automatically be changed to the setting value that is suited for business intelligence.
 - Compression: H.264 or H.265
 - Image capture size: SXVGA(1280x960)
 - Frame rate: 5 ips
 - Image quality: SF
- Depending on the setting value before change, the total recording days may drastically change.
- Select "Share" for "Usage pattern" to change minimal setting items of the camera.
- Please check if the face detection function of the camera is available.

License registration of Cam.1 - Registration

License registration of Cam.2 - Registration

Configure the mode settings for "Face matching" and "Accumulate statistics data"

[Common]

[High quality mode]

Set the bit rate to 4096kbps regardless of the camera model or the compression format being used.

Off : Operates in normal mode. Settings will be selected automatically. (see page 6)

On : Operates in high quality mode.

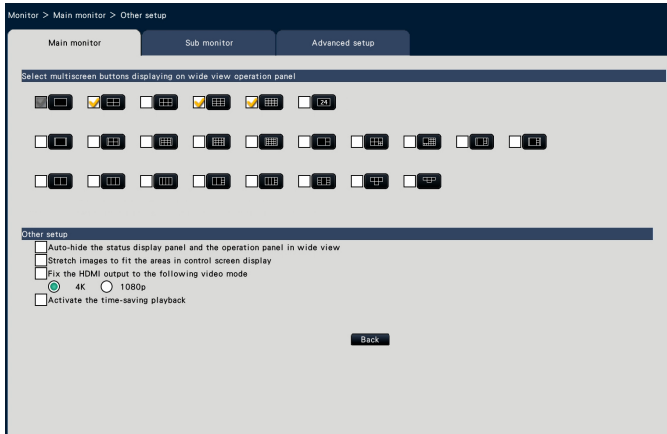

WJ-NX200K, WJ-NX200K/G New functions (Software V2.30)

The recorder will be able to provide the following new functions by updating the software.

Details on the new functions and revisions	Reference pages
<p>Restrictions are added.</p> <p>When using the web browser</p> <ul style="list-style-type: none"> •The live audio may be interruptedly output regularly if the camera image display is set to high resolution of JPEG and the audio encoding format is set to AAC. •The update of live images and playback images may be delayed if the camera is set to H.265 with high resolution. <p>When registering the network cameras, WV-S8530N and WV-X8570N</p> <ul style="list-style-type: none"> •Set the following values for each camera number of the same camera. <ul style="list-style-type: none"> •Camera authentication •Compression and capture size of camera images •Recording settings (audio encoding format) *for WV-X8570N only. •SD backup setup •Security between this product and cameras (connection, data encryption setting) •MJPEG cannot be selected for compression of images. •The SD backup of WV-X8570N is available only when its compression of images is H.265(1) and image capture size is WQHD(2560x1440). •Auto-IP address assignment is only available for S8530-1 or X8570-1. (☞ Page 13) •The settings may not be reflected if you set and send values for multiple camera numbers of the same camera. If an error occurs, select a camera number that the error occurs and send the setting again. (☞ Page 17) •The VMD alarm of the camera can not be set on the recorder. Set the VMD alarm of the camera on the VMD area tab of the setting menu on the camera side. (☞ page 33) <p>When backing up the SD memory card</p> <ul style="list-style-type: none"> •The product may not record images as set in the product if SD memory cards rather than those supporting the speed class 10 are used. Refer to the operating instructions of the camera for further information. •If bandwidth control of the camera is changed to a value other than the initial value, the SD backup may not function. Refer to the operating instructions of the camera for further information. 	Page 6
<p>The following image capture sizes are added.</p> <p>Set up recording for individual cameras [Advanced recording setup] [Image capture size] "7M(3072x2304)" is added to the aspect ratio of 4:3. "5M(3072x1728)" is added to the aspect ratio of 16:9. "4M(1440x2560)" and "5M(1728x3072)" are added to the aspect ratio of 9:16.</p>	Page 38
<p>Description is added.</p> <p>Acquire the image saved on the SD memory card Important:</p> <ul style="list-style-type: none"> •After setting the SD memory backup function to "On", manually acquire the SD backup data from the camera. (☞ Page 70) Beginning the next day, data acquisition will be automatically performed a quarter past every hour. 	Page 44

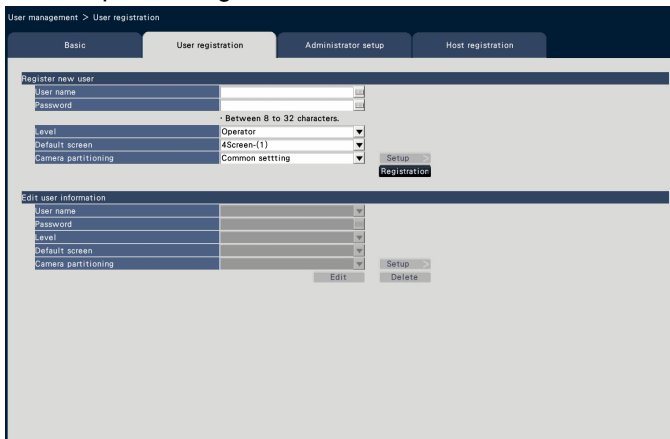

Wide view layout is added.

Page 47

The camera partitioning function is added.

Page 59

[Camera partitioning]

Select which control range each camera should follow.

Common setting: The camera follows "User level settings" of "User management>Basic".

Individual setting: The camera follows camera partitioning settings set for each user.

Click the [Setup >] button to set the camera partitioning individually.

Set the camera partitioning individually.

Set availability of image display and camera operation in each camera for the assigned user.

View/Operate: Enables display of live/recorded images and camera operation.

View: Enables display of live/recorded images, but disables camera operation.

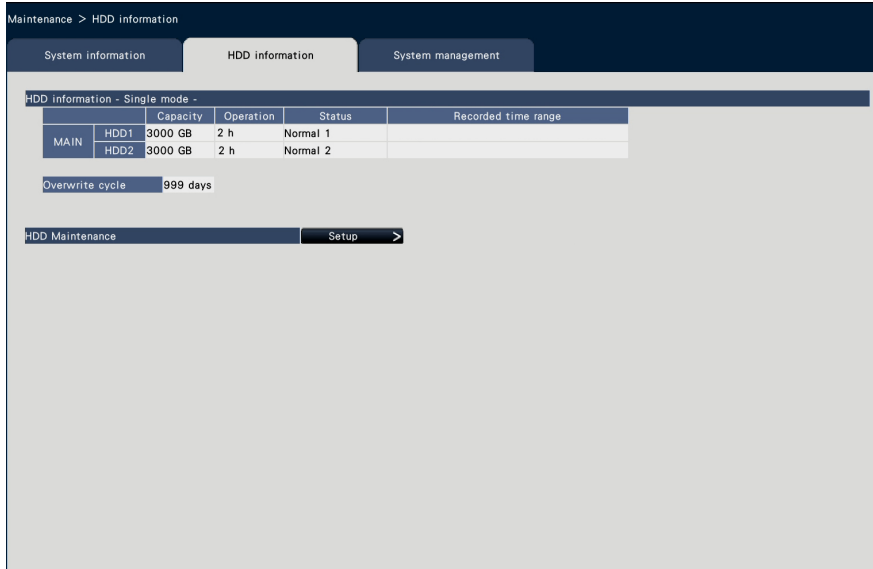

Off: Disables display of live/recorded images and camera operation.

Note:

- Camera operation is not available when "Camera control" is limited in "User level settings" of the [Basic] tab for the operation level of the assigned user, even if "View/Operate" is set.

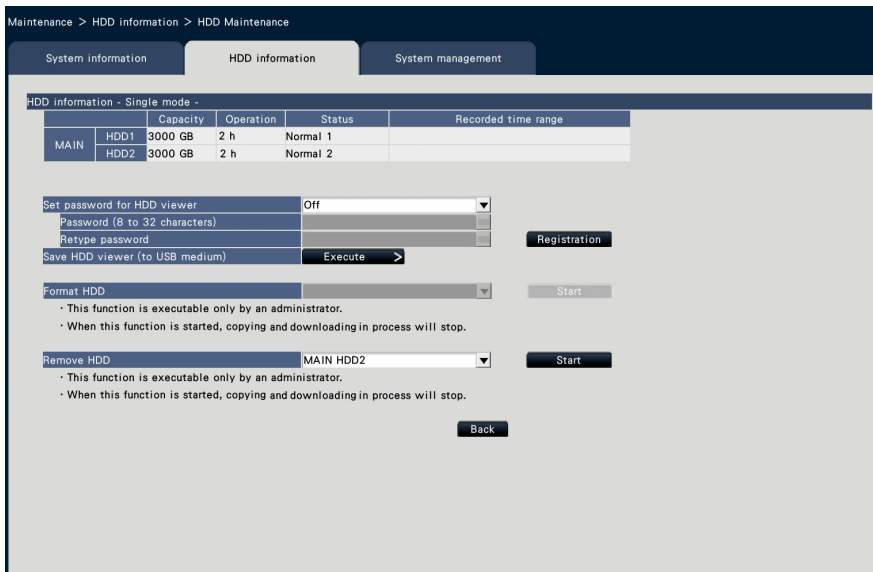

Functions to format and remove HDDs without stopping recording are added.

Page 64

[HDD Maintenance]

Set a password for the HDD viewer, format and remove HDDs. Click the [Setup >] button for HDD maintenance.

[Format HDD]

Select a HDD to format and click the [Start] button to format the HDD.

Important:

- When a hard disk drive is formatted, all the recorded images will be erased.
- HDDs with "Playback only" or "Added" status only can be selected.
- After starting to format the HDD, copying and downloading in process will stop

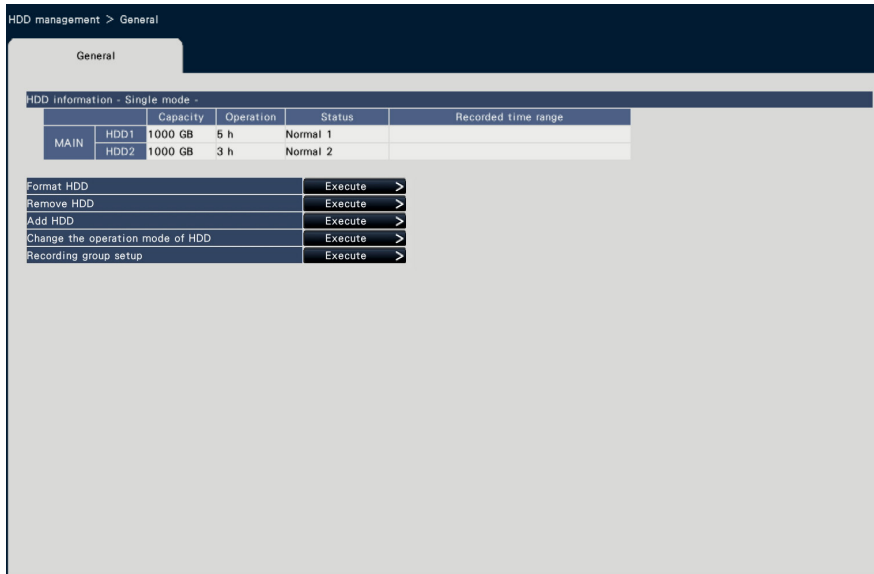

[Remove HDD]

Select a HDD to remove and click the [Start] button to display the password confirmation window for the HDD viewer. When the entered value and the setting match, the HDD is removed.

Important:

- HDDs in recording cannot be selected. If the operation mode of HDDs is the mirroring mode, one of the two HDDs in recording may be removed.
- After starting to remove the HDD, copying and downloading in process will stop.

The recording group function is added.

In the mirroring mode, the [Recording group setup] will not be displayed.

Page 72

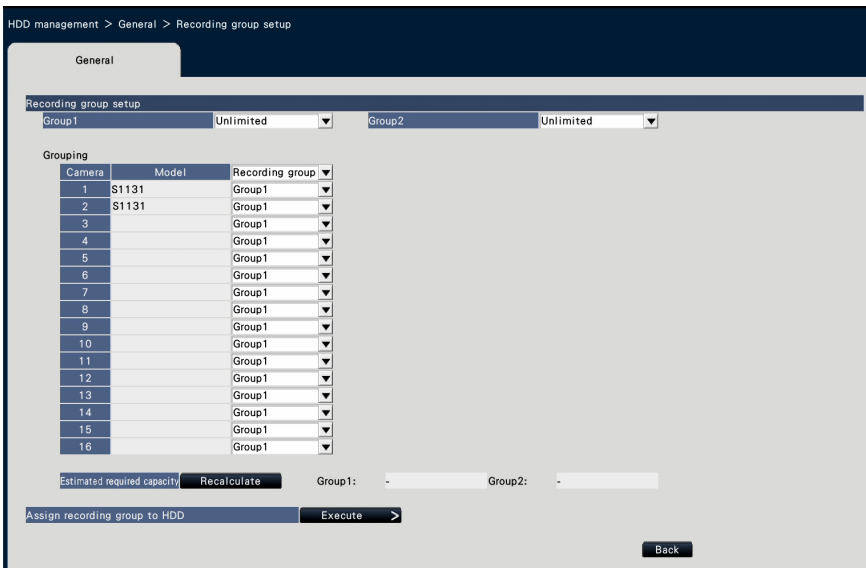

Set the recording group [Recording group setup]

You can set two groups of recording period (unlimited, 1 to 184 days) and assign each camera to either one. Also, you can set a HDD used for recording of each group.

Between Page 74 and Page 75

Step 1

Click the [Execute >] button on the [Recording group setup]
 → The recording group setup window will be displayed.

Step 2

Set the recording period of each group.

[Group1]

Set the recording period of Group1.

Unlimited/ 1 day/ .../ 10 days/ 14 days/ 30 days/ 45 days/ 60 days/ 90 days/
 120 days/ 150 days/ 180 days/ 184 days

Default: Unlimited

Details on the new functions and revisions

Reference pages

[Group2]

Set the recording period of Group2.

Unlimited/ 1 day/ .../ 10 days/ 14 days/ 30 days/ 45 days/ 60 days/ 90 days/
120 days/ 150 days/ 180 days/ 184 days

Default: Unlimited

Note:

- If "Unlimited" is selected, recording will continue as long as possible for the set HDD.
- If the number of days is set, playback will only show the set period.

Step 3

Set the recording group of each camera.

[Recording group]

Group1, Group2

Default: Group1

Note:

- If either "Group1" or "Group2" are set other than "Unlimited" for the recording group, the recording group is displayed on each screen of the HDD management and of the HDD information of the Maintenance page.

Step 4

Click the [Recalculate] button to calculate estimated required capacity of each group and display it.

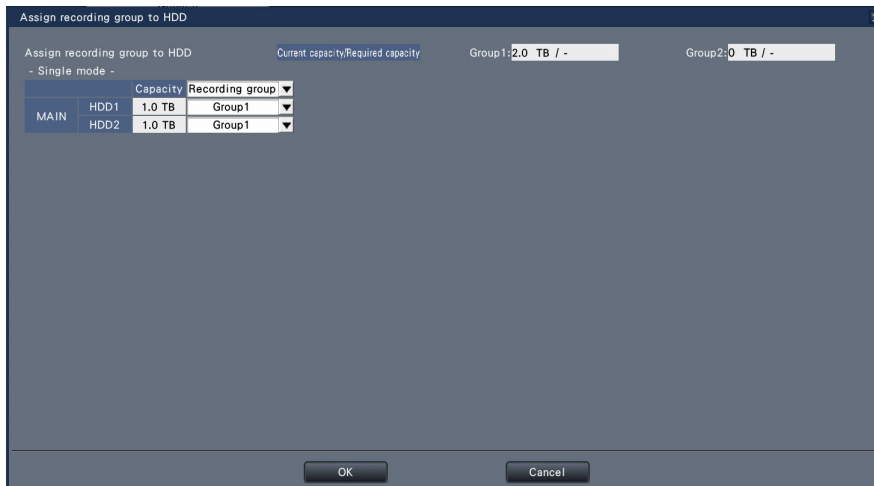

Note:

- When "Unlimited" is set, the estimated capacity will be displayed as " - ".

Step 5

Click the [Execute >] button on the "Assign recording group to HDD".

→ The [Assign recording group to HDD] screen will be displayed.

Step 6

Set the recording group of each HDD in a way that the HDD capacity displayed at the top of the screen exceeds the estimated required capacity.

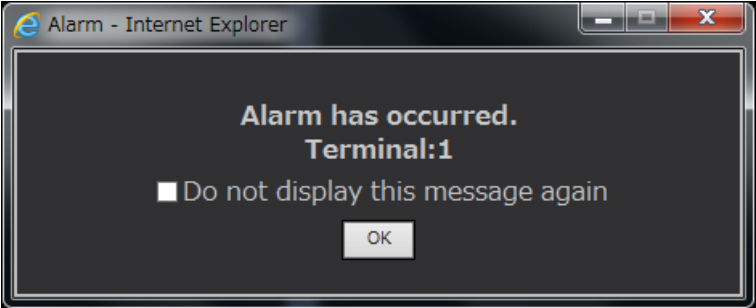

Step 7

Click the [OK] button to close and click the [Back] button on the recording group setup screen to complete the settings.

Important:

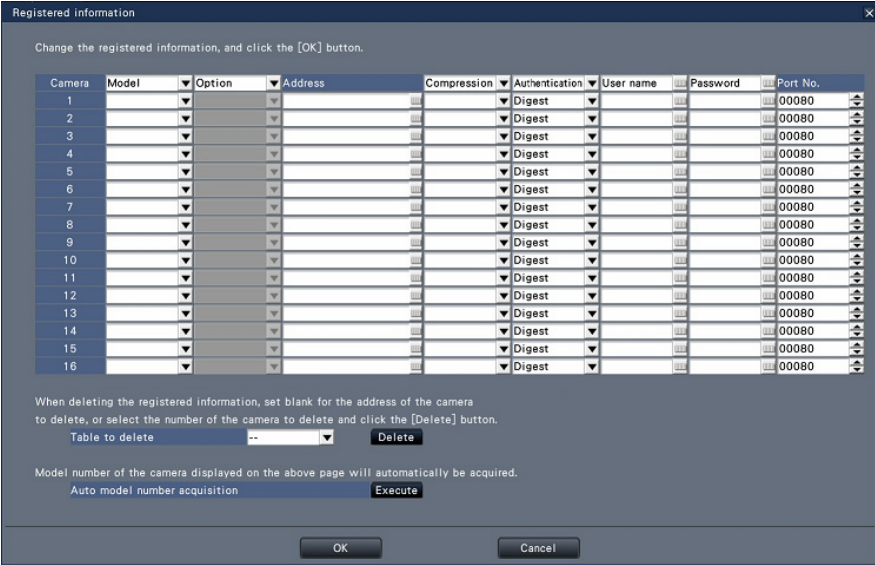

- If "Assign recording group to HDD" is changed, the HDD data will be deleted.

WJ-NX200K, WJ-NX200K/G New functions (Software V2.20)

The recorder will be able to provide the following new functions by updating the software.

Details on the new functions and revisions	Reference pages
<p>User authentication is added when accessing the camera.</p>  <p>[Authentication] Set authentication used for the user authentication when accessing the camera. Digest: Uses digest authentication. Digest or Basic: Uses either digest or basic authentication. Basic: Uses basic authentication. Default: Digest</p>	<p>Page 15</p>
<p>"Reset" and "Value" are added to "Adaptive black stretch" of the camera's adaptive black stretch function.</p> <p>[Adaptive black stretch] Reset: returns the adaptive black stretch setting to the default. Value: Adjusts brightness of a dark area in an image.</p>	<p>Page 27</p>
<p>Port numbers which cannot be set are added.</p> <p>Note: 20, 21, 23, 25, 42, 53, 67, 68, 69, 79, 80, 105, 110, 123, 161, 162, 443, 546, 547, 995, 10001, 10002, 10003, 10004, 10005, 10006, 10007, <u>50000~50255</u></p>	<p>Page 43, Page 52 Page 53, Page 75</p>

A static route is settable for configuration of the network.

Page 52

[Static route]

Click the [Setup >] button to set a static route.

[Static route]

Set a static route. Configure this setting after fully understanding the network environment of the recorder.

On: Enables the static route.

Off: Disables the static route.

[Address]

Set the destination address. To change the IP address, click the [▲]/[▼] button.

[Subnet mask]

Set the destination subnet mask. Enter in the same way as the address.

[Gateway]

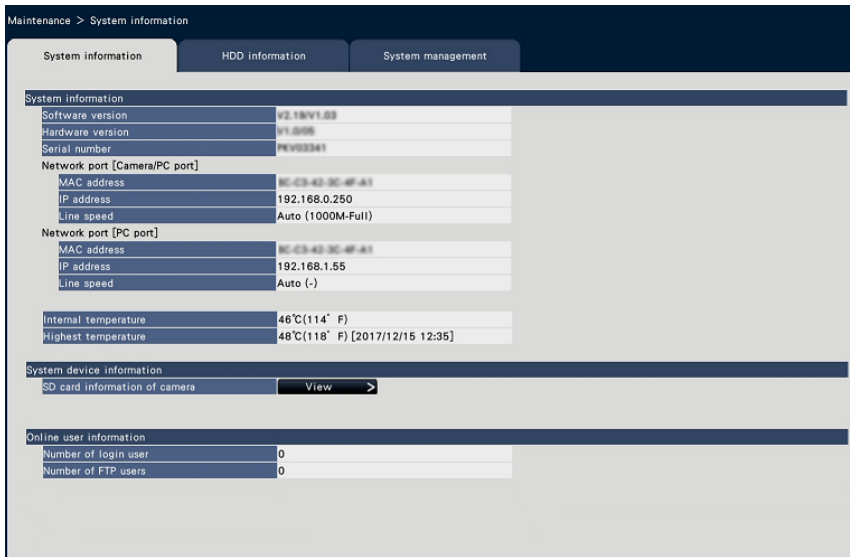

Set the destination gateway. Enter in the same way as the address.
