## WJ-NX300K, WJ-NX300K/G New functions and revisions (Software V4.30)

The recorder will be able to provide the following new functions by updating the software.

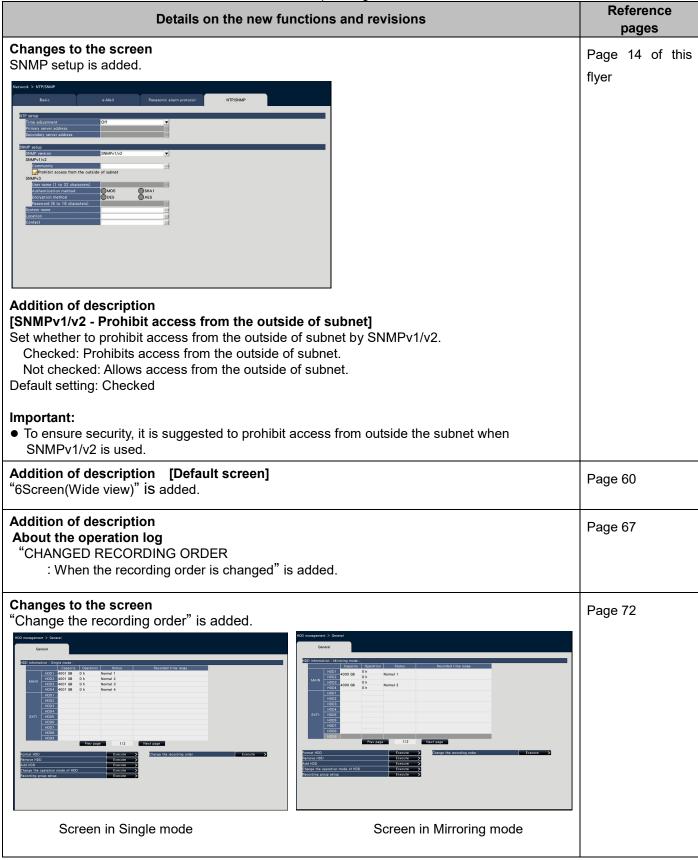

Details on the new functions and revisions	Reference pages
Deletion of description	Page 21 of this
Restrictions when using this product	flyer
◆ After the date and time display of the camera is set from the recorder, the date and time display setting will become same for all camera numbers of the same camera. (☞ Page 18)	nyor
Changes of description	Page 16 of this
Restrictions when using this product When registering a U series network camera	flyer
The supported camera firmware is V1.10 or later.	.,,
• The compression method "H.265(3)" cannot be selected. (If "H.265(3)" is selected in the	
software V4.20 or earlier of this recorder, the setting will be changed to "H.265(1)" after it is upgraded to V4.30.)	
• It is not necessary to select the camera registration option. (If the camera registration option	
"(30IPS)" is selected in the software V4.20 or earlier of this recorder, the setting will be	
changed to "No option" after it is upgraded to V4.30. Also, restrictions on multi-screen	
display and sub-stream recording are not covered.)	
• If the camera registration option "(30IPS)" is selected in the software V4.20 or earlier of this	
recorder, execute Synchronize the camera's settings with this unit (* Page70) after it is upgraded to V4.30.	
•Smart coding (GOP control) settings cannot be used depending on the settings of the	
camera.	
Addition of description	Page 6
Restrictions when using this product	. ago o
When registering the network camera WV-S1552L, WV-S2252L, or WV-S2552L	
<ul> <li>When the compression method is MJPEG and the resolution is 7M (3072x2304), 5M (2560x1920), 5M (3072x1728), WQHD (2560x1440), 5M (1728x3072) or 4M (1440x2560),</li> </ul>	
the maximum recording frame rate may be 1 ips depending on the settings of the camera.	
When registering the network camera WV-S1572L, WV-S2272L, or WV-S2572L	
• If the recording frame rate is set to 30 ips/25 ips, the frame rate of multi-screen monitor	
display will drop to 15 ips/12.5 ips.	
• When the resolution is 4KUHD (3840×2160) or 8M (2160×3840) and the compression mode is H.265 (Smart coding Off), the image quality of 25 ips and more is set; for XF and H.264,	
the image quality of 10 ips and more is set; for XF, the image quality of 25 ips and more is	
set; for SF, the code rate exceeds 12 Mbps, so the SD backup cannot be run. In addition,	
even if these settings are changed in the SD backup, the bit rate will not be changed and	
thus the recording will not be done properly.	
• If 25 fps or 30 fps is set for stream 1 on the camera side, the maximum recording frame rate for stream 3 and stream 4 will be 15 ips.	
• If the resolution of stream 4 is HD (1280x720), the maximum recording frame rate will be 15	
ips.	
• When the compression method is MJPEG and the resolution is 4KUHD (3840x2160),	
WQHD (2560x1440), 8M (2160x3840) or 4M (1440x2560), the maximum recording frame	
rate may be 1 ips depending on the settings of the camera.  When registering the network camera WV-S4151, WV-S4551L, WV-X4172, WV-X4173, or	
WV-X4573L	
• For WV-X4172, WV-X4173 and WV-X4573 L, if the image capture mode is " <wall> Single PTZ", 2560x1920 cannot be set for the resolution.</wall>	
• For WV-X4172, WV-X4173, and WV-X4573L, when the compression method is MJPEG and	
the resolution is 9M (2992x2992) or 5M (2192x2192), the maximum recording frame rate	
may be 1 ips or 2 ips depending on the settings of the camera.	
• Changing the Super dynamic and Wide dynamic range settings may cause temporary camera communication errors.	

Details on the new functions and revisions	Reference pages
Restrictions when using this product When registering the network camera WV-S8531N or WV-X8571N  Set the following values for each camera number of the same camera.  Camera authentication  Compression method, resolution, frame rate, and image quality of camera images  Recording settings (audio encoding format)  For WV-X8571N only  SD backup settings, smart coding (GOP control) settings  Security setting between this recorder and the camera (connection, data encryption settings)  MJPEG cannot be selected as the image compression method.  The WV-X8571N can take SD backup only when the image compression method is H.265(1) and the resolution is WQHD (2560x1440) or FHD (1920x1080).  Auto-IP address assignment is only available for S8531-1 or X8571-1. (EPP Page 13)  The settings may not be reflected if you set and send values for multiple camera numbers of the same camera. If an error occurs, select a camera number that the error occurs and send the settings again. (EPP Page 17)	Page 6
Changes to the screen Addition of setting items  Other setup    Committee the committee of	Page 45
[Extend an event recording during "MotionAlarm" of ONVIF event]  When checked, the event recording that starts with "MotionAlarm" in the ONVIF event notified by the camera will be extended for the duration set in the event recording duration (** Page 36) unless an end notification is received from the camera.  Note  • Please be noted that if the communication is temporarily interrupted due to the network environment, the recording will continue until the alarm operation is canceled unless an end notification is received.  • In camera site alarm advanced settings (** Page 42), when one camera is set to "Recording Camera" for multiple cameras, it may not work properly.

Description has been added Note:  •Do not turn off the device of	to "Update the firmware".  r disconnect the network cable during the update.	Page 192
Items have been added to "T  Symptom  The live image of the camera does not display on monitors in the multi-screen split and the screens turn black.  Cannot play on more than 5 screens while the sub-stream recording is set to "On".	Cause/solution  If "Target stream" in AI Privacy Guard setting on the target camera is set to "Stream (2) & Stream (4)", the resolution of the camera for H.264 (2) or H.265 (2) becomes the same as that for H.264 (1) or H.265 (1), so the live image may not be displayed or the playback may be disabled depending on the number of screens in the multi-screen split. If you do not use AI privacy guard recording on this product, set the "Target stream" in AI Privacy Guard setting on the target camera to other than "Stream (2) & Stream (4)".	Page 206

### WJ-NX300K, WJ-NX300K/G New functions and revisions (Software V3.20)

The recorder will be able to provide the following new functions by updating the software.

### WJ-NX300K, WJ-NX300K/G New functions (Software V3.00)

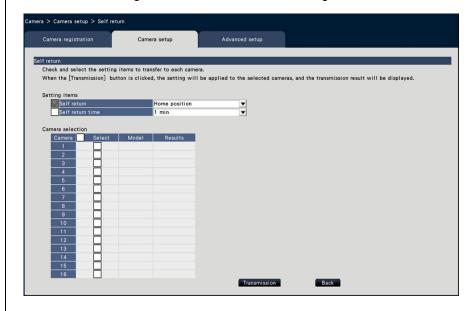

The recorder will be able to provide the following new functions by updating the software. It also contains the latest information related to the Operating Instructions.

Details on the new functions and revisions	Reference pages
Restrictions has been added to section "When displaying live images from the camera" of "Restrictions when using this product".	Page 5
When a live image from a camera with a recording frame rate set to 30 ips (25 ips) is displayed on a monitor with 4K output, some subjects may not be displayed smoothly.	
New restrictions have been added to the restrictions on the network cameras WV-S8530N and WV-X8570N added to V2.30.	Page 19 of this New functions
• After the date and time display of the camera is set from the recorder, the date and time display setting will become same for all camera numbers of the same camera ( Page 18).	(Software V2.30) flyer
Restrictions has been added to section "Restrictions when using this product".	Page 5
<ul> <li>When registering the network cameras WV-S1570L, WV-S2270L and WV-S2570L</li> <li>If the recording frame rate is set to 30 ips/25 ips, the multi-screen monitor display frame rate will drop to 15 ips/12.5 ips.</li> <li>When the resolution is 4KUHD (3840x2160) or 8 M (2160x3840) and the compression mode is H.265 (Smart coding Off), the image quality of 25 ips and more is set; for XF and H.264,the image quality of 10 ips and more is set; for XF, the image quality of 25 ips and more is set; for SF, the code rate exceeds 12 Mbps, so the SD backup cannot be run. In addition, even if these settings are changed in the SD backup, the code rate will not be changed and the video will not be recorded correctly.</li> </ul>	
Description has been added in section [Compression] in "Change the registered information".	Page 15
Note:  ● If "Do not use stream 2 of camera with each function of this recorder" is switched to ON, H.264(2) and H.265(2) are not used. (☞Page 5 of this New functions flyer)	
"Self return", "Advanced individual camera setup" and "Schedule" are added to [Camera Setup] tab.	Page 17
Camera > Camera setup  Camera registration  Camera setup  Advanced setup

## Details on the new functions and revisions Reference pages

The function to change the Self return function setting of camera is added.

Page 25

#### Set self return [Self return]

Select the self-return function for individual cameras and transfer it to the camera to change the camera settings.

#### [Self return]

After the manual operation is completed, once the time set by the "Self return time" is passed, any of the selected camera operation modes will be automatically returned.

Off: Do not perform self return.

Home position: Return to home position as soon as the set time elapses.

Auto track: Return to home position and begin auto-track (auto rear-ending) operation as soon as the set time elapses. After that, the operation of returning to home position and beginning auto-track (auto rear-ending) after a certain period of time is repeatedly executed.

Auto pan: Begin auto-pan operation as soon as the set time elapses.

Preset sequence: Sorting operation begins as soon as the set time elapses.

Patrol: Patrol operation begins as soon as the set time elapses.

#### [Self return time]

After the manual operation is completed, select the deadline time to return to the "Self return" setting from the following items.

10 s / 20 s / 30 s / 1 min / 2 min / 3 min / 5 min / 10 min / 20 min / 30 min / 60 min

#### ■ Camera selection

Select the camera that transfers the self return setting. In the setting items, check the camera that transfers the selected content.

#### [Transmission] button

Transmit the setting of the "Self return" to the camera.

Once transmission is completed and the setting has been applied to the camera, "OK" will be displayed in the "Results" field.

If the display reads "Authentication error", etc., the camera connection or the setting may have failed.

#### [Back] button

Click the button after completing the settings. The screen returns to the [Camera setup] tab.

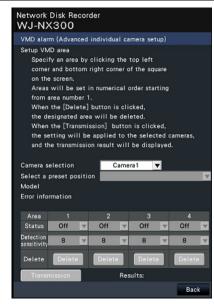

Details on the new functions and revisions	Reference pages
The function for setting the motion detection alarm of individual cameras is added.	Page 33

Set up VMD alarm for individual cameras [VMD alarm (Advanced individual camera setup)] Select the motion detection area and detection sensitivity for each camera and transmit the information to the cameras to change the camera settings.

Clicking the "Advanced individual camera setup" [Setup >] button for "VMD alarm" on the [Camera setup] tab will display the setup page.

#### Note:

- This menu collects setting information from the selected camera and applies it on the setting screen.
- Only the fisheye network camera can set the "Fisheye" mode.

#### [Camera selection]

Select the camera for which you want to set the VMD alarm.

#### [Select a preset position]

If the selected camera is a camera with preset function, the preset position is selected.

#### [Model] [Error information]

See Page 18.

#### [Setup VMD area]

Click the top left corner and bottom right corner of the square on the screen, set the specified position as area 1, and display the area box. Area will be set in numerical order starting form area number 1. When the [Delete] button is clicked, the designated area will be deleted.

#### Note:

- Depending on the position of the area box, it is sometimes corrected slightly after the transfer settings.
- If the area box is too small, the area number will not be displayed correctly.

#### [Status]

When the motion detection area is set to Off, the status of the area will be switched to "Off".

#### [Detection sensitivity]

Set the sensitivity when moving within the area to be detected.

1 (low) ~ 15 (high)

#### [Transmission] button

Transmit the setting of the "VMD alarm" to the camera. Once transmission is completed and the setting has been applied to the camera, "OK" will be displayed in the "Results" field. When the Error information is not displayed as "-", it cannot be transferred to the camera.

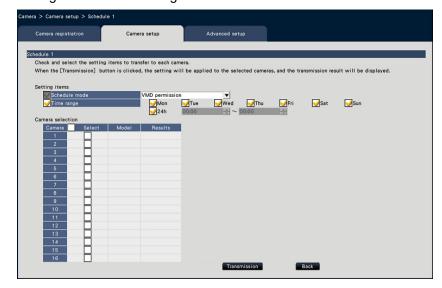

#### [Back] button

Click the button after completing the settings. The screen returns to the [Camera setup] tab.

# Details on the new functions and revisions Reference pages The function of setting Schedule mode and Schedule range for individual cameras is added. Page 33

#### Set schedule [Schedule 1 to Schedule 4]

Select the Schedule mode and Schedule range for individual cameras and transfer to the camera to change the camera settings.

#### [Schedule mode]

Select the schedule operation.

Off: Do not perform the schedule operation.

Alarm permission (Terminal alarm 1,2,3): Allow the terminal to input an alarm during the set range of the schedule.

Alarm permission (Terminal alarm 1): Allow Terminal 1 to input an alarm during the set range of the schedule.

Alarm permission (Terminal alarm 2): Allow Terminal 2 to input an alarm during the set range of the schedule.

Alarm permission (Terminal alarm 3): Allow Terminal 3 to input an alarm during the set range of the schedule.

VMD permission: Allow VMD during the set range of the schedule.

Preset position: 1 to Preset position: 8: After the time is set for the schedule, it moves to the position selected from the preset position registered in advance.

#### [Schedule]

Check the boxes for the day you want to set the schedule range. Set the start time and the end time when you want to specify a time period. Check "24 h" when the time period is not set.

#### ■ Camera selection

Select the camera to which the setting of the "Schedule" is to be sent. Mark the checkbox of the camera to which the setup information is to be transmitted.

#### [Transmission] button

Transmit the setting of the "Schedule" to the camera.

Once transmission is completed and the setting has been applied to the camera, "OK" will be displayed in the "Results" field. If the display reads "Authentication error", etc., the camera connection or the setting may have failed.

#### [Back] button

Click the button after completing the settings. The screen returns to the [Camera setup] tab.

## Details on the new functions and revisions Reference pages

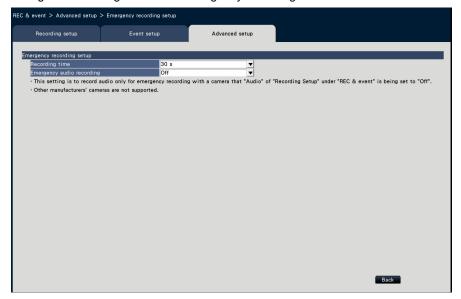

Emergency recording function has been added.

#### [Emergency recording setup]

Configure the settings related to emergency recording

#### [Emergency audio recording]

If audio recording is not set for the camera, select whether to record audio only during emergency recording.

Off: Does not record audio even during emergency recording.

On: Records audio only during emergency recording. (G.726 format)

On (AAC-LC): Records audio only during emergency recording. (AAC-LC format) Note:

- •For cameras without audio recording, audio will not be recorded even when it is set to a value other than "Off".
- •Depending on the timing when emergency recording is started, audio may be recorded at the end of the previous recording data just before the emergency recording.

## 

Not checked: Does not keep aspect ratio (Changes the ratio automatically)

Default: Not checked

### Details on the new functions and revisions Reference pages Dynamic DNS/ DDNS function has been added. Page 51 twork > Basic Basic Camera/PC p. 192.168.000.250 **♦** 000.000.000.000 **♦** 000.000.000.000 ◆◆▼ 192.168.000.001 ▼ Auto the system will restart automatically after saving setup data. 000.000.000.000 ■ DDNS Setup Select the DDNS service to determine whether or not to use DDNS. Off: Does not use the DDNS function. Viewnetcam.com: Uses the "Viewnetcam.com" service. Dynamic DNS update: Uses Dynamic DNS Update (RFC2136 compliant). **Default:** Off

• If using a third party DDNS service, it is necessary to set the port forwarding for the router

 About Dynamic DNS Update (RFC2136 compliant) Operation not using "Viewnetcam.com" service but using a third party DDNS service is not guaranteed. We are not responsible for any troubles or accidents on the circumstances where the camera is used arising out of such services. If using a third party DDNS service (not using the "Viewnetcam.com"), refer to the

Important:

before use.

DDNS service provider for its configuration.

#### Details on the new functions and revisions

Reference pages

View HDD remaining capacity function has been added

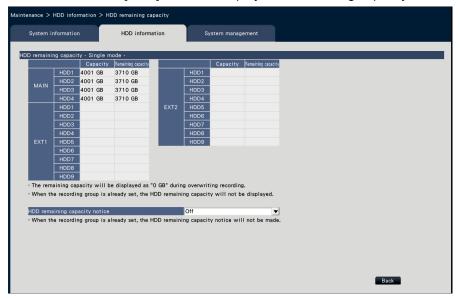

Page 64

#### [HDD remaining capacity]

Displays remaining capacity of HDD. Also, the timing to notice when the capacity becomes low can be set. Click [View] button to display HDD remaining capacity.

Example above shows the screen for single mode.

#### [Capacity]

Displays the capacity of HDD.

#### [Remaining capacity]

Displays remaining capacity of HDD.

Note

- •Remaining capacity displayed does not include capacity used to manage data. Therefore, the displayed HDD capacity is less than the actual amount.
- •Remaining capacity will displayed as 0GB if the whole space of the HDD is used up by recording data.

#### [HDD Remaining capacity notice]

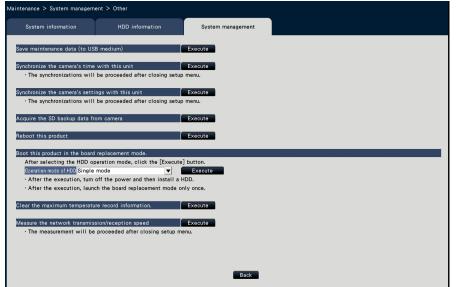

Set the notification timing for when the remaining capacity of HDD becomes low compared to the total capacity. There are E-mail notification and original notification.

Off: Does not perform HDD remaining capacity notice.

 $1\%{\sim}10\%$  : Notifies when remaining capacity becomes below the set value.

# Details on the new functions and revisions Reference pages

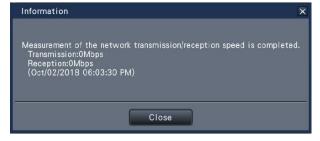

A function to measure the network transmission/reception speed has been added.

### [Measure the network transmission/reception speed]

Used to measure the amount of network traffic transmitted from the recorder. Click the [Execute] button and execute from the confirmation window displayed. After configuration is completed, measuring starts.

The result of measurement will be displayed after measurement finishes.

### Note

- Measurement is made from about 8 seconds after setting is done and will continue measuring for 10 seconds.
- ·Status display area of operation screen will display "Measuring" while measuring.
- •The result of measurement is the sum of all network ports.
- •The result of measurement is only for reference. It may differ depending on the network environment.

The following image capture sizes are added.	Page 37, Page 38
Set up recording for individual cameras [Advanced recording setup] [Image capture size] "7M(3072x2304)" is added to the aspect ratio of 4:3. "5M(3072x1728)" is added to the aspect ratio of 16:9. "4M(1440x2560)" and "5M(1728x3072)" are added to the aspect ratio of 9:16.	
Description is added.	Page 44
Acquire the image saved on the SD memory card Important:  •After setting the SD memory backup function to "On", manually acquire the SD backup data from the camera. (Page 70) Beginning the next day, data acquisition will be automatically performed a quarter past every hour.	

# Details on the new functions and revisions Wide view layout is added. Page 47 Page 47

Page 59

The camera partitioning function is added.

### [Camera partitioning]

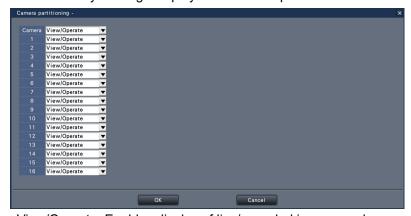

Select which control range each camera should follow.

Common setting: The camera follows "User level settings" of "User management>Basic". Individual setting: The camera follows camera partitioning settings set for each user.

Click the [Setup >] button to set the camera partitioning individually.

### Set the camera partitioning individually.

Set availability of image display and camera operation in each camera for the assigned user.

View/Operate: Enables display of live/recorded images and camera operation.

View: Enables display of live/recorded images, but disables camera operation.

Off: Disables display of live/recorded images and camera operation.

### Note:

•Camera operation is not available when "Camera control" is limited in "User level settings" of the [Basic] tab for the operation level of the assigned user, even if "View/Operate" is set.

### Details on the new functions and revisions

### Reference pages

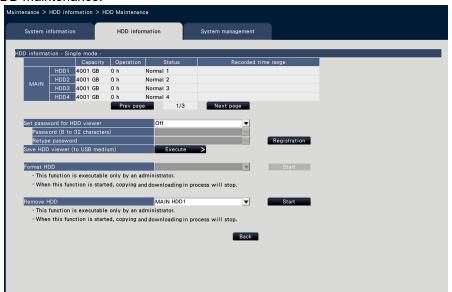

Functions to format and remove HDDs without stopping recording are added.

Page 64

### [HDD Maintenance]

Set a password for the HDD viewer, format and remove HDDs. Click the [Setup >] button for HDD maintenance.

The single mode screen is used for explanation.

### [Format HDD]

Select a HDD to format and click the [Start] button to format the HDD.

### Important:

- •When a hard disk drive is formatted, all the recorded images will be erased.
- •HDDs with "Playback only" or "Added" status only can be selected.
- •After starting to format the HDD, copying and downloading in process will stop

### [Remove HDD]

Select a HDD to remove and click the [Start] button to display the password confirmation window for the HDD viewer. When the entered value and the setting match, the HDD is removed.

### Important:

- •HDDs in recording cannot be selected. If the HDD stand-by control mode is On, a HDD following the HDD in recording also cannot be selected. If the operation mode of HDDs is the mirroring mode, one of the two HDDs in recording may be removed.
- •After starting to remove the HDD, copying and downloading in process will stop.

# Details on the new functions and revisions A static route is settable for configuration of the network. Page 52 Network > Basic > Advanced setup Basic e-Mail Panasonic alarm protocol NTP/SNMP

### [Static route]

Click the [Setup >] button to set a static route.

### [Static route]

Set a static route. Configure this setting after fully understanding the network environment of the recorder.

On: Enables the static route.

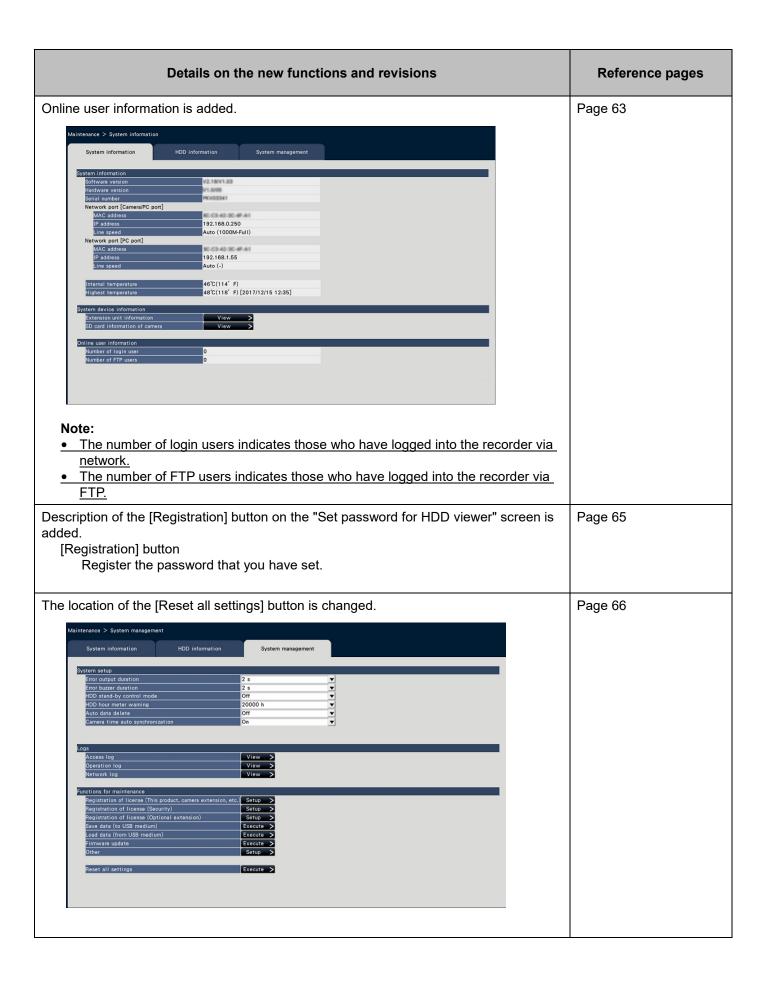

Off: Disables the static route.

### [Address]

Set the destination address. To change the IP address, click the  $[\blacktriangle]/[\blacktriangledown]$  button. [Subnet mask]

Set the destination subnet mask. Enter in the same way as the address. [Gateway]

Set the destination gateway. Enter in the same way as the address.
