AI Video Motion Detection

- All differentiates between vehicles and people, detecting and sending warning notifications when an intruder enters a specified area.
- Intruder detection:

Issues an alarm when a moving object enters a specified area.

• Cross Line detection:

Issues an alarm when an object moving in the specified direction crosses a specified threshold.

· Loitering detection:

Issues an alarm when a moving object enters a specified area and stays there for a specified amount of time.

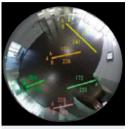

People Counting

• Cross Line Counting:

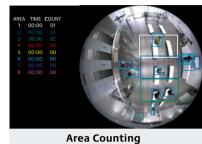

Counts the number of people moving in a specified direction and cross a specified threshold.

• Area Counting (Queue Management):

Counts the number of people in the set area.

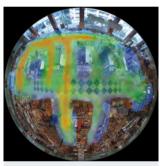

Heat map

 Heat mapping provides statistical information about traffic flow and keeps counts for people passing through and loitering in the area.

Passing

Loitering

Occupancy detection

• The network camera uses its Al engine to detect congestion, providing data that can be used to direct visitor traffic flow in advance or help staff work more efficiently.

■ Al Privacy Guard for 360-degree fisheye

Al Privacy Guard

• Al can automatically mosaic faces and figures of people who are photographed to safeguard privacy and portrait rights.

i-PRO Active Guard

• The i-PRO Active Guard stores the best images and metadata captured by i-PRO network cameras, then collates this data with the watch list registered in the client software and issues an alarm when a match is found. The server does not require expensive hardware because i-PRO network cameras handle the advanced processing. The server can even be installed on the same hardware as the VMS. The system comprises the i-PRO Active Guard, the Al application installed on i-PRO network cameras utilizing Al engines, and i-PRO Active Guard Plug-in software for the VMS client.
