HDD Compatibility Chart

Version : 10th June 2024

CONTENTS

CONTENTS

Notes

When using the recommended Seagate or Western Digital HDDs and the Canister.
(for WJ-NX510K/WJ-NX410K/WJ-HXE410)

Please DO NOT fix the HDD (the Canister) with two screws on the bottom. (⇒ marks below)
The length of the screw may be longer than the depth of the tapped hole.

Important information : The preparations to use Seagate HDD

To use Seagate HDD, the following 1 items must be performed before the installation of HDDs.

1. Turn off SSC   (SSC : Spread Spectrum Clocking, default setting : "ON")

   Caution   : If SSC is NOT turned off, the HDD will never be recognized by NVR.

   >> See Next Page

Caution :
   We will not take responsibility for any failure that occurs by performing an operation different from the detailed procedure from the next pages.

The preparations to use Seagate HDD
  1) The items and procedure to turn off SSC

◆ The required items

  ・ Windows PC with "SeaChest utilities"   *1

  ・ USB to SATA conversion adapter for 3.5 inch HDD with AC power input

      Note : Adapter with special functions such as clone function cannot be used.

  ・ HDDs to be changed

  *1 : the download site of "SeaChest Utilities"

        https://www.seagate.com/support/software/seachest/

◆ Procedure to turn off SSC setting

  Described on page 34 to 38

1-2 HDD Compatibility Chart

Capacity	Vendor	Model	Height	Note
8TB	Western Digital	WD84PURZ-74B2YY0	Normal	*1
		WD84PURZ-85B2YY0		

*1 The difference between "-74" and "-85" depends on the WD sales route.
*2 Please refer to page 2, not to fix two screws into bottom side of HDD.
*3 To use Seagate SkyHawk series, it is necessary to set the HDD SSC setting to "OFF" in advance. And need to choose the screws to install the HDDs. Please refer to page 4 for instructions.
*4 When using WJ-HXE410 with WJ-NX400 and NX300, HDD capacity is limited. (Up to 8TB HDD is available)

Installation of the HDD(s) for WJ-NU301 (from Installation Guide)

Step 1
Unplug the Power cord from the recorder's Power cord inlet.

Step 2
Remove the 4 screws on the left and right sides of this product, remove the 1 screw on the top cover, remove the 1 screw on the middle upper part of the back, and then remove the top cover.
Step 3
Clip the top of the hook on the HDD HOLDER TOP with your finger and thumb. Push inward with your thumb to release the hook, and open the HDD HOLDER TOP.
Hook

HDD HOLDER TOP   HDD HOLDER BASE

Step 4
Remove the AIR CAP that protects the cable connector.

Step 5
Tilt the HDD at an angle and insert the cable connected to the board into the HDD.

HDD

Cable

Step 6
Make sure that the cable passes through the HDD HOLDER BASE slot so that they do not come apart, and place the HDD with the cable plugged in on the HDD HOLDER BASE. If the cable is not threaded through the slot, pass it through before placing the HDD.
Pass the cable through the HDD HOLDER BASE slot.

HDD
Note:
For WJ-NU301, the position of the cable connector on the board side is different.

Step 7
Pass the hook of the HDD HOLDER TOP through the inside of the HDD HOLDER BASE. Push in the arrow on the HDD HOLDER TOP, close the HDD HOLDER TOP, and then fix the HDD.

Hook

Step 8
Perform Step 3 to Step 7 for another HDD, and install the HDD.

Step 9
Reinstall the top cover, and fix it by tightening the 4 screws on the left and right sides of this product, 1 screw on the top cover, and 1 screw on the middle upper part of the back.
Installation of the HDD for WJ-NU300/NU201/NU101 (from Installation Guide)

Step 1

Unplug the DC plug of the AC power adapter from the DC jack of the recorder.

Step 2

Remove the two screws on the left and right sides of the main unit, remove the three screws on the back, and then remove the top cover.

Step 3

Clip the top of the hook on the HDD HOLDER TOP with your finger and thumb. Push inward with your thumb to release the hook, and open the HDD HOLDER TOP.

HDD HOLDER TOP   HDD HOLDER BASE   Hook

Step 4

Remove the AIR CAP that protects the cable connector.

Step 5

Tilt the HDD at an angle and insert the cable connected to the board into the HDD.

HDD

Cable

Step 6

Make sure that the cable passes through the HDD HOLDER BASE slot so that they do not come apart, and place the HDD with the cable plugged in on the HDD HOLDER BASE. If the cable is not threaded through the slot, pass it through before placing the HDD.

Pass the cable through the HDD HOLDER BASE slot.

HDD

Step 7

Pass the hook of the HDD HOLDER TOP through the inside of the HDD HOLDER BASE. Push in the arrow on the HDD HOLDER TOP, close the HDD HOLDER TOP, and then fix HDD.

Hook

Step 8

Install the top cover as before, and tighten the two screws on the left and right sides of the main unit, and the three screws on the back to secure it.

There are two height types of HDD,
 one is normal height (26.1mm / 1.028"),
 the other is low profile (20.2mm / 0.795").
If you will change HDD <u>from normal height to low profile</u>, you shall also change top cover of HDD holder.
No need to change top cover of HDD holder,
 if you will change from low profile HDD to normal height one,
 or HDD height is the same before and after.

We recommend you changing HDD as the same height one before.

before		after	
Normal height HDD	**Low profile HDD**		**Need** Service part # **PGUX2500ZA/C1** (ask i-PRO service section)
Low profile		Normal height	(No need for another part)
Normal height		Normal height	(No need for another part)
Low profile		Low profile	(No need for another part)

CONTENTS

3. For WJ-NX400,300,200 series and others

(*) For models that have been discontinued for more than 7 years, the compatibility chart will be deleted.

Notes

When using the recommended Seagate or Western Digital (5TB, 6TB,8TB) HDDs and the Canister.
   (for WJ-NX400K/WJ-HXE400/WJ-ND400K/WJ-HDE400/WJ-HD716K/WJ-HD616K)

Please DO NOT fix the HDD (the Canister) with two screws on the bottom. (⇒ marks below)
The length of the screw may be longer than the depth of the tapped hole.

Important information : **The preparations to use Seagate HDD**

(For WJ-NX400K/WJ-HXE400/WJ-NX300K/WJ-NX200K/WJ-ND400K/WJ-HDE400/WJ-HD716K/WJ-HD616K)

To use Seagate HDD, the following 2 items must be performed before the installation of HDDs.

1. Turn off SSC   (SSC : Spread Spectrum Clocking, default setting : "ON")

    Caution   : If SSC is NOT turned off, the HDD will never be recognized by NVR.

    >> See Next Page

2. Choose the screw to use

    Caution   : If do not install the correct screws, the HDD will not be properly secured to the case, and may experience HDD errors or malfunction.

    The screws to install the HDD depend on the serial number of the NVR.

    >> See Page 17

Caution :
  We will not take responsibility for any failure that occurs by performing an operation different from the detailed procedure from the next pages.

The preparations to use Seagate HDD
1) The items and procedure to turn off SSC

◆ The required items

・ Windows PC with "SeaChest utilities"　*1

・ USB to SATA conversion adapter for 3.5 inch HDD with AC power input

Note：Adapter with special functions such as clone function cannot be used.

・ HDDs to be changed

CONTENTS

4. Common information

1. Download SeaChest Utilities from the following URL then install it to Windows PC.

   https://www.seagate.com/support/software/seachest/

2. Connect target HDD via USB to the PC which SeaChest Utilities is installed.

3. Double click SeaChest Utilities icon on desktop and launch SeaChest Utilities.
4. Enter the following command from Windows Command Prompt.

Seachest_Basics_x64_windows.exe --scan

```
C:\Program Files\Seagate\SeaChest>SeaChest_Basics_x64_windows.exe --scan
==============================================================================
SeaChest_Basics - Seagate drive utilities - NVMe Enabled
Copyright (c) 2014-2022 Seagate Technology LLC and/or its Affiliates, All Rights Reserved
SeaChest_Basics Version: 3.3.1-3_2_1 X86_64
Build Date: Jul 26 2022
Today: Wed Nov  2 09:43:49 2022
==============================================================================
Vendor     Handle      Model Number           Serial Number          FwRev
NVMe       PD0         KBG4A7NV256G TOSHIBA MEMORY 61UPG2HIQS12       AFPA1101    PC drive
ST4000VX PD1           016-3CV104             152D20337A0C                         Target drive
```

Seagate Model# won't be displayed because HDD is connected via USB bridge chip.
Check ID# (PD1 for above case) of target drive.

5. Confirm the current SSC condition by entering the following command.

Seachest_Configure_x64_windows.exe -d PD1 --ssc info

default value : SSC Feature is enabled
(SSC is "ON")

6. Turn off SSC by entering the following command.

Seachest_Configure_x64_windows.exe -d PD1 --ssc disable

```
C:¥Program Files¥Seagate¥SeaChest>SeaChest_Configure_x64_windows.exe -d PD1 --ssc disable
===============================================================================
SeaChest_Configure - Seagate drive utilities - NVMe Enabled
Copyright (c) 2014-2022 Seagate Technology LLC and/or its Affiliates, All Rights Reserved
SeaChest_Configure Version: 2.1.0-3_2_1 X86_64

===============================================================================

¥¥.¥PhysicalDrive1 - 016-3CV104 - - - - ATA
Successfully set SSC feature to disabled
Please power cycle the drive to make the change take effect.
```

Power cycle the drive to make the change take effect.
(No need to close SeaChest Utilities during power cycle)

7. Confirm SSC setting had been changed by entering the following command.

Seachest_Configure_x64_windows.exe -d PD1 --ssc info

SSC is "OFF"

8. Power off USB-SATA converter and then remove the HDD from the converter.

Introduction

As network disk recorders used for security system generally operate all-year-round, they need regular maintenance to avoid system failures and to keep their performance.

What is a hard disk drive?

What is a hard disk drive?
- A hard disk drive (an HDD) is a device which reads and writes digital data magnetically with the disks (platters) that spin and the head floating above the disks.
head

disks

Points to Note

Point # 1 Avoid Vibration

The magnetic head floating above the disks in an HDD is set extremely close to the disks with the spacing that even cigarette smoke or flu virus cannot go through. Therefore, vibration can cause head crash and generate tiny dust if the head gets out of correct position. This results in creating fatal scratches in an HDD. Please install your recorder in a stable place away from declination, vibration or physical impact.
Also, as an impact of sound (sound pressure) such as the radiation sound from gas distinguishing agent system can affect the speed of data transfer on HDDs, please install your recorder in the place without loud noise.

HDD = Precision Device

cigarette smoke
0.1-0.5μm

flu virus
0.02-0.1μm

head

disk

0.015-0.025μm
Point # 2 Keep Your Recorder from Getting Hot

Keeping HDDs exposed to high temperature results in the deterioration of its head and disks, and it can shorten the HDD life as well. Please consider ventilation when installing. The ambient operating temperature is 5 degrees Celsius to 45 degrees Celsius (the recommended temperature is 25 degrees Celsius).

Consider Ventilation When Installing
Point # 3 Avoid Static Electricity and Condensation

Static electricity can be the cause of electronic parts failure in an HDD.
Condensation can cause a malfunction of a recorder as the head sticks to the disk due to the water.
Condensation occurs;
 - when relocating the recorder to a place with sudden change in temperature and humidity.
 - in the room just after heated.
 - when the recorder is relocated from the cooled place to the heated place with high humidity.

Prevent Static Electricity and Condensation

4-2 Recorder Maintenance Guide
> ## Regular Maintenance is Necessary for a Network Disk Recorder
>
> As a network disk recorder has HDDs for data storage, regular maintenance is necessary to use the recorder under its optimal conditions.

The Major Causes of Network Disk Recorder Failure

The Major causes of network disk recorder failure results from HDD malfunctions as below.
a. The head crashes on the disk due to vibration or impact on the recorder and that creates scratches on the disk.
b. Operating your recorder in high temperature environment causes the incorrect spacing between the head and the disks and that causes a head crush and creates scratches on the disk.
c. Non-proper spin of the motor and the deterioration of the head's characteristics occur due to the long term use of HDDs. These can cause the write/ read error. The scratches on the disk gets larger in several months and causes a recorder failure.

Tips for the Stable Operation of Your Network Disk Recorder

As the parts in a disk recorder are consumable, it is necessary to maintain your recorder regularly. The consumable parts in a network disk recorder are the followings.
HDD Unit / cooling fan / built-in backup battery / damper rubber for fixing HDDs. (Please note that the applied parts varies depending on the models.)
Maintenance including parts exchange leads to the stable operation of your recorder.

Estimated Replacement Period of an HDD

 Although the HDD life differs depending on the usage environment, an HDD is certainly a consumable device. When used at an ambient temperature of 25 degrees Celsius, errors such as write error may start to occur at the operating time of 20,000 hours.
When it reaches over 30,000 hours, the HDD can die due to the deterioration of the read/ write head or the motor in it.
Keep the ambient temperature under 25 degrees Celsius and replace HDDs at the point of 18,000 hours for your secure data management.
Please note that this is our estimated replacement period for reference and does not guarantee the life of your HDDs.

Hour Meter:
Approx. 9,000h = 1 year, : Approx. 18.000h = 2 years, Approx. 26,000h = 3 years, Approx. 35,000h = 3 years, Approx. 44,000h = 5 years

HDD hour meter warning

HDD hour meter warning is a function that performs a warning when the operating time of an HDD reaches a specified level. With default setting, it performs a warning at the operating time of 20,000 hours where errors such as write error can start to occur. As described on the previous slide, the reliability of an HDD starts to decrease rapidly before the operating time reaches 20,000 hours. Therefore we recommend to replace HDDs at the point of 18,000 hours to prevent possible failures and manage data securely.
To Prevent HDD troubles ….

Use Antistatic & shock prevention mat

Do not place vertically

Do not stack

Do not hit

Do not drop

Do not use a regular electric screwdriver

*1 The difference between "-74" and "-85" depends on the WD sales route.

*2 Please refer to page 2, not to fix two screws into bottom side of HDD.

*3 To use Seagate SkyHawk series, it is necessary to set the HDD SSC setting to "OFF" in advance.
   And need to choose the screws to install the HDDs. Please refer to page 15 for instructions.
