

End-to-End Security Solution for School Transportation

The key to a comprehensive security solution lies in creating an entire suite of products that work together seamlessly. This is why i-PRO Americas Inc. created a solution for school transportation security that allows users to manage and maintain all aspects of their mobile vehicle or bus fleets. Built using our Video Insight video management system, this end-to-end solution provides seamless vehicle tracking via GPS map overlays, live and recorded playback, and hands-free Wi-Fi video offloading. Additionally, as part of the Video Insight VMS, no licenses are required for i-PRO cameras. This makes the i-PRO school transportation security solution extremely feature-rich and cost-effective.

Provides security officials with easy access to recorded video

Easy Transfer of Recorded Video

All recordings, whether from a single bus or an entire fleet, are transferred wirelessly upon arrival to the vehicle's central depot.

Video Playback with GPS Data

Video playback is synchronized with the GPS data to provide information on the location and speed of the vehicle at the time of an incident. (For live playback, a third-party cellular hot spot is needed.)

Trigger-Based Recording & Bookmarking

Triggers such as vehicle starting, doors opening, or stop sign deployment start the recording process to help capture events and detect any violation. You can also search through these same events via video bookmarks in VI.

Real-Time Monitoring

Easily gain access to evidence and the ID of the person who caused an accident or violation.

Fleet Location Search

The system allows you to track your vehicles, and it offers users the ability to search a timeframe and make sure that all of the vehicles took their appropriate routes. This helps ensure accountability on the road.

Mass Software Updates

Using the VI central depot server and connected Wi-Fi network, a user can update the software for the entire fleet, allowing for better overall system maintenance.
